Magnetic Resonance Techniques In Clinical Trials In Multiple Sclerosis:

Magnetic Resonance Techniques in Clinical Trials in Multiple Sclerosis M. Filippi, R.I. Grossmann, G. Comi, 2012-12-06 We have entered an exciting period in the study of multiple sclerosis and its treatment Central to this progress has been the introduction of magnetic resonance techniques When Young and his colleagues published the first images of the brain in multiple sclerosis at the end of 1981 it was at once obvious that magnetic resonance imaging would play a major role in diagnosis Intuitively one felt that it would also have a role in increasing our understanding of the pathogenesis of the disease and in monitoring treatment And so it has proved Important problems however remain perhaps the most important of which at present is the weak predictive power of standard magnetic resonance imaging methods in determining the possibility of progression of impairment and disability Recently there have been advances which promise to overcome some of these problems but decisions about what approach to adopt in selecting patients for clinical trials and which techniques to use in monitoring treatment during their course are still difficult In this book Dr Filippi and his colleagues have assembled an outstanding group of contributors whose work is central to the progress that is being made The coverage of the issues involved in the use of magnetic resonance techniques in assessing therapeutic effect is comprehensive and though the field is changing rapidly the principles and much of the detail in the book are likely to have lasting value *Multiple Sclerosis Therapeutics* Jeffrey A. Cohen, Richard A. Rudick, 2011-10-20 This book comprehensively reviews the current state of clinical trial methods in multiple sclerosis treatment providing investigators sponsors and specialists with current knowledge of outcome measures and study designs for disease and symptom management The status of the rapidly evolving field of disease modifying drugs is presented with emphasis on the most promising therapies currently being tested Experts discuss disease and symptom management for MS subtypes including neuromyelitis optica and pediatric MS In addition key scientific advances in MS pathology genetics immunology and epidemiology are presented The fourth edition has been extensively revised featuring more than 50% new material All chapters have been substantially updated to provide current information on rapidly evolving topics and this volume contains 15 new chapters reflecting the growth of the field in recent years This book is an essential reference for practitioners caring for MS patients investigators planning or conducting clinical trials and clinical trial sponsors *Multiple Sclerosis Therapeutics* Eli Minkoff, Eli Baker, 2007-03-06 Since the publication of the previous edition of this volume there has been substantial progress in a number of areas of multiple sclerosis MS research Although immunosuppressive treatments continue to be developed and refined more targeted immunomodulatory therapies are surfacing as we learn more about how the immune system works in health and Multiple Sclerosis Therapeutics Richard Rudick, 1999-09-01 This textbook examines the most important aspects of multiple sclerosis that impact on clinical trial design on the development of new disease therapies and on patient care The international team of contributors discuss the clinical course of multiple sclerosis its clinical heterogeneity the presence of subclinical disease activity which occurs during

the early stages of the disease Multiple sclerosis presents clinical challenges from unexpected and irregular relapses to progressive deterioration

Clinical Trials in Neurology Roberto J. Guilloff, 2013-03-14 Clinical Trials in Neurology comprehensively tackles the methodology and design of clinical trials in neurological disease A general section deals with the ethical aspects drug development and regulatory requirements basic trial designs and the statistics used A diseases section tackles specific aspects of disorders focusing on the relevant ethical issues outcome variables and experience with large multicentre trials

Columbus, 2005 Multiple sclerosis MS is a life long chronic disease diagnosed primarily in young adults During an MS attack inflammation occurs in areas of the white matter of the central nervous system nerve fibers that are the site of MS lesions in random patches called plaques This process is followed by destruction of myelin which insulates nerve cell fibers in the brain and spinal cord Myelin facilitates the smooth high speed transmission of electrochemical messages between the brain the spinal cord and the rest of the body The initial symptom of MS is often blurred or double vision red green color distortion or even blindness in one eye Most MS patients experience muscle weakness in their extremities and difficulty with coordination and balance Most people with MS also exhibit paresthesias transitory abnormal sensory feeling such as numbness or pins and needles Some may experience pain or loss of feeling About half of people with MS experience cognitive impairments such as difficulties with concentration attention memory and judgment Presents leading research from around the globe *Interferon Therapy of Multiple Sclerosis* Anthony Reder, 1997-01-28 This reference presents cutting edge basic and clinical research on all forms of interferon IFN involvement in the management of multiple sclerosis MS detailing topics from IFN receptor molecular interactions to synergy and interference with other agents such as cytotoxic drugs and chemotherapy Features detailed research findings on IFN 1a Avonex and IFN 1b Betaseron Handbook of Multiple Sclerosis Stuart D.
