Magnetic Resonance Imaging In Coronary Artery Disease:

Magnetic Resonance Imaging in Coronary Artery Disease Ernst E. van der Wall, Albert de Roos, 2012-12-06 It is with pleasure that I write this foreword for the book Magnetic Resonance Imaging in Coronary Artery Disease edited by Dr van der Wall and Dr de Roos I am pleased for two reasons Firstly as chairman of the Scientific Board of the Interuniversity Cardiology Institute of the Netherlands ICIN because ever since the technique became available for use in medicine and biology our Institute has tried and succeeded to promote the introduction and development of magnetic resonance imaging in cardiology in the Netherlands ICIN was the first cardiological institute on the European continent to purchase its own nuclear magnetic resonance spectroscope for the study of myocardial metabolism Secondly because I have always been infatuated with this noninvasive technique that can produce cardiac images without ionic radiation and at the same time allows for the study of myocardial metabolism as well And even more so because nuclear magnetic resonance imaging in medicine is one of the shining examples of medical progress as a result of breakthrough discoveries in physics and chemistry

Cardiac Magnetic Resonance Imaging for the Diagnosis of Coronary Artery Disease, 2010 **Coronary Magnetic Resonance Angiography** Andre J. Duerinckx, 2006-05-05 In recent years there has been increasing interest in the clinical applications of coronary angiography techniques Coronary MRA can be instrumental in the evaluation of congenital coronary artery anomalies however the complexity of advanced MR pulse sequences and strategies may be overwhelming to many Coronary MR Angiography demystifies the art of coronary MRA by providing a text in plain language with clearly illustrated imaging steps and protocols Designed to bridge the gap between radiology and cardiology it is written for physicians and scientists planning to incorporate this technique into their research or practice Magnetic Resonance Imaging of Myocardial Deformation and Scarring in Coronary Artery Disease. Johan Kihlberg, 2017-11-15 Although improved treatments have reduced the rates of acute complications from myocardial infarction sequelae such as heart failure and sudden death threaten the future wellbeing of those patients Secondary prevention after myocardial infarction is related to cardiovascular risk factors and the effect of the infarct on left ventricular function Cardiovascular magnetic resonance imaging CMR is necessary to determine the size of the infarct scar and can with great precision determine left ventricular volumes left ventricular ejection fraction and deformation strain and torsion The purpose of this thesis was to improve on CMR methods to facilitate image acquisition and post processing in patients with high risk of coronary artery disease CAD In Paper 1 a three dimensional phase sensitive inversion recovery 3D PSIR sequence was modified to measure T1 during a single breath hold The measured T1 values were used to extrapolate a map of T1 relaxation which avoided the time consuming manual determination of the inversion time The data collection consisted of phantom experiments Monte Carlo simulations of the effect of various heart rates and clinical investigation of 18 patients with myocardial infarction Scar images created with the modified sequence were compared to those created with the standard sequence The 3D PSIR sequence was able to measure

T1 relaxation with a high accuracy up to 800 ms which is in the suitable range for scar imaging Simulated arrhythmias showed that the method was robust and able to tolerate some variation in heart rate The modified sequence provides measurements of inversion time that can be used to facilitate standard scar imaging or to reconstruct synthetic scar images Images of infarct scar obtained with the 3D PSIR sequence bore striking similarity to images obtained with the standard sequence In Paper 2 125 patients with high risk of CAD were investigated using the displacement encoding with stimulated echoes DENSE sequence Image segments with infarct scar area 50% transmural could be identified with a sensitivity of 95% and a specificity of 80% based on circumferential strain calculated from the DENSE measurements The DENSE sequence was also applied in other directions but its sensitivity and specificity to detect scar was lower than when used for circumferential strain In Paper 3 90 patients with high risk of CAD were examined by DENSE tagging with harmonic phase HARP imaging and cine imaging with feature tracking FT to detect cardiac abnormalities as manifested in end systolic circumferential strain Circumferential strain calculated with DENSE had higher sensitivity and specificity than the competing methods to detect infarction with transmural 50% Global circumferential strain measured by DENSE correlated better with global parameters such as left ventricular ejection fraction myocardial wall mass left ventricular end diastolic and end systolic volume than strain measured by FT or HARP In Paper 4 myocardial torsion was investigated using DENSE HARP and FT in 48 patients with high risk of CAD Torsion measured by each of the three methods was correlated with other global measures such as left ventricular ejection fraction left ventricular mass and left ventricular end diastolic and end systolic volumes The torsion measurements obtained with DENSE had a stronger relationship with left ventricular ejection fraction left ventricular mass and volumes than those obtained with HARP or FT DENSE was superior to the other methods for strain and torsion measurement and can be used to describe myocardial deformation quantitatively and objectively

Advances in Imaging Techniques in Ischemic Heart Disease Ernst E. van der Wall,Thomas H. Marwick,Johan H. C. Reiber,2012-12-06 In recent years there have been tremendous advances in cardiac imaging techniques covering the complete spectrum from echocardiography nuclear cardiology magnetic resonance imaging to contrast angiography With respect to these noninvasive and invasive cardiac imaging modalities marked

technological developments have allowed the cardiologist to visualize the myocardium in a far more refined manner than conventional imaging was capable of. Echocardiography has extended its domain with intravascular ultrasound, cardiovascular nuclear imaging has added positron emission tomography to its line of research, magnetic resonance imaging has been broadened with magnetic resonance angiography and spectroscopy, and finally contrast angiography has widened its scope with excellent quantitation programs. For all these imaging modalities, it is true that the application of dedicated quantitative analytic software packages enables the evaluation of the imaging studies in a more accurate, reliable, and reproducible manner. It goes without saying that these extensions and achievements have resulted in improved diagnostics and subsequently in improved patient care. Particularly in patients with ischemic heart disease, major progress has been made to detect coronary artery disease in an early phase of the disease process, to follow the atherosclerotic changes in the coronary arteries, to establish the functional and metabolic consequences of the luminal obstructions, and to accurately assess the results of interventional therapy.

Pathophysiology, Risk Factors, and Management of Chronic Heart Failure Ram B. Singh, Jan Fedacko, Krasimira Hristova, Galal Eldin Nagib Elkilany, 2024-04-04

Chronic Heart Failure Pathophysiology: Risk factors and Mechanisms is the first of two separate but closely related volumes which aim to provide an inclusive overview on Chronic Heart Failure (CHF). This first volume is focused on the epidemiology, classification, molecular mechanisms, pathophysiology, causes, identification, and interactions of heart failure. It will explain the uncertainties and issues in Heart Failure by helping readers understand the physiopathology of CHF in the light of behavioural risk factors. 2D and 3D speckle tracking echocardiography have been used to quantify regional alterations of longitudinal strain and area strain through their polar projection, which allows a further evaluation of both the site and extent of myocardial damage. The analysis of strain can identify subclinical cardiac failure, myocyte remodelling, which is a major issue in CHF. Myocardial Strain measure by speckle tracking echocardiography is frequently attenuated in these conditions and can be utilized for the evaluation of disease progression and the effect of therapeutic interventions, as well as prevention, because it could be a manifestation of behavioural risk factors. These 2 separate volumes serve as essential references to both researchers and practicing clinicians, proposing novel methods of research by using behavioural and environmental risk factors as intervention agents, as well as discussing deficiency in the present approaches in management of HF and proposing new methods of early diagnosis and therapies for the clinical management of CHF. Includes a number of new and controversial topics: Roles of both behavioural and nutritional risk factors in CHF, considering behavioural intervention which may change the remodelling, as well as nutrient supplementation or change of diet in preventing CHF or converting resistant HF into HF responding to therapy. Evidence-based knowledge on CHF with an emphasis on viewing CHF as a disease of the brain and contribution from other systems. Pre-Heart failure which can be prevented to restore normal cardiomyocyte function. Pathogenesis of HF in chronic kidney disease. 2D and 3D speckle tracking echocardiography. Includes never published tables and figures to aid

understanding of the topics Contributions from international leading experts in the field written with the aim of serving both researchers and practicing clinicians Oxford Textbook of Interventional Cardiology Simon Redwood,Nick Curzen,Martyn Thomas,2010 This definitive text spans the whole spectrum of interventional cardiology procedures also covering structural heart disease The very latest techniques and devices are covered in detail to provide practical evidence based guidance on treating the full range of coronary lesions
