Encyclopedic Handbook of Integrated Optics Kenichi Iga,Yasuo Kokubun,2018-10-03 As optical technologies move closer to the core of modern computer architecture there arise many challenges in building optical capabilities from the network to the motherboard Rapid advances in integrated optics technologies are making this a reality However no comprehensive up to date reference is available to the technologies and principles underlying the field The Encyclopedic Handbook of Integrated Optics fills this void collecting the work of 53 leading experts into a compilation of the most important concepts phenomena technologies and terms covering all related fields This unique book consists of two types of entries the first is a detailed full length description the other a concise overview of the topic Additionally the coverage can be divided into four broad areas A survey of the basics of integrated optics exploring theory practical concerns and the fundamentals behind optical devices Focused discussion on devices and components such as arrayed waveguide grating various types of lasers optical amplifiers and optoelectronic devices In depth examination of subsystems including MEMS optical pickup and planar lightwave circuits Finally systems considerations such as multiplexing demultiplexing 3R circuits transmission and reception Offering a broad and complete treatment of the field the Encyclopedic Handbook of Integrated Optics is the complete guide to the

fundamentals principles and applications of integrated optics technology **Bibliography of Magnetic Materials and Tabulation of Magnetic Transition Temperatures** T. F. Connolly,2012-12-06 This referenced compilation of magnetic transition temperatures represents with the Addendum papers actually received by the RMIC through May 1972 and consists of two lists alphabetical by compounds one for Curie and one for Neel temperatures Where different values appeared in the literature for a single compound all are listed with separate references given for each There is no attempt at critical evaluation which except for a few well studied and well characterized materials would hardly be worth the effort All that one can say for most of the compounds is that for a given material with a certain or all too often uncertain history of preparation

and treatment stoichiometry homogeneity and chemical or structural purity a magnetic transition was indicated at the temperature s listed Only when the reasons for different values are explicitly stated in the literature do they appear as brief comments in the body of the lists In order to include the most recent data and to eliminate the delay involved in recomposition of the lists an addendum is provided While this requires the perusal of two lists rather than one it does ensure that the compilation represents the entire RMIC collection at the moment of going to press The 2478 references are restricted to those papers specifying a Curie or Neel temperature and do not reflect the complete magnetism literature even for the materials listed
