Magnetohydrodynamics In Channels And Containers:

Magnetofluidynamics in Channels and Containers U. Müller, L. Bühler, 2001-03-20 The book deals with the theme of incompressible flows of electrically conducting fluids in hydraulic components The main content of the book is a result of engineering research associated with the design of liquid metal cooling systems for fusion reactors The book is well suited to serve as a guide for utilising magnetohydrodynamic means in other engineering disciplines such as in material processing metallurgical engineering and power engineering

Magnetofluidynamics in Channels and Containers U. Müller, L. Bühler, 2013-03-09 The contents of this book has been the subject of a lecture course which the first author has held regularly for engineering students at the Technical University of Karlsruhe beginning in 1987 The book serves two purposes It introduces students in their fourth year study of basic engineering and graduate students to the fundamentals of magnetohydrodynamics Furthermore it may be used by engineers and physicists in research establishments and industry as a practical tool to become familiar with the particular phenomena of magnetothermohydraulics that they may encounter in technical liquid metal flows under the influence of magnetic fields The contents and structure of the book are motivated by the research and development work for a self-cooled liquid metal blanket of future nuclear fusion reactors The research requirements for such a challenging project naturally lead to the frontiers of magnetohydrodynamic research This is reflected in the book by references to several publications and reports performed at the Forschungszentrum Karlsruhe and other research establishments However we are convinced that the advancement of magnetohydrodynamic knowledge gained within the framework of the Fusion Reactor Project may be utilized in other fields of engineering sciences

Magnetohydrodynamics Sergei S. Molokov, R. Moreau, H. Keith Moffatt, 2007-08-26 Magnetohydrodynamics MHD studies the interaction between the flow of an electrically conducting fluid and magnetic fields It involves such diverse topics as the evolution and dynamics of astrophysical objects thermonuclear fusion metallurgy and semiconductor crystal growth etc Although the first ideas in magnetohydrodynamics appeared at the beginning of the last century the explosion in theoretical and experimental studies occurred in the 1950s 60s This state of the art book aims at revising the evolution of ideas in various branches of magnetohydrodynamics astrophysics earth and solar dynamos plasmas MHD turbulence and liquid metals and reviews current trends and challenges

Boundary Element Method for Magnetohydrodynamic Flow Münevver Tezer-Sezgin, Canan Bozkaya, 2024-05-20 Boundary Element Method for Magnetohydrodynamic Flow offers one of the first systematic and detailed treatments of the application of boundary element method BEM to magnetohydrodynamic MHD flow problems It aims to fill in the gaps left by the earlier books on the application of BEM to some physical problems such as fluid dynamics elasticity and geophysics An overview of the theory of MHD flow and a comprehensive mathematical formulation of BEM for

convection diffusion type differential equations are provided by the authors who heavily rely on their research and experience in the disciplines of BEM and MHD flow The book first discusses the basic principles of the BEM approach for the MHD duct flow problems in coupled form with the fundamental solution derived by the authors Specifically the BEM solutions of MHD flow in pipes of rectangular or circular cross sections and MHD flow in infinite regions are all covered emphasizing the convergence of infinite boundary integrals This book especially concentrates on the MHD flow in regions with partly insulated partly perfectly conducting boundaries by BEM giving also the parabolic boundary layer thickness emanating from the points of discontinuities on the walls The book secondly includes the dual reciprocity boundary element technique DRBEM an alternative form of BEM that expands the applicability of BEM to MHD flow and heat transfer problems as well as buoyancy MHD flow with magnetic potential and inductionless MHD flow The purpose of the book is to serve as a research book for applied mathematicians engineers scientists and graduate students who wish to learn in depth about the formulation and application of BEM in MHD flow problems As such it is an invaluable resource and a major contribution to the numerical solution of MHD flow problems

Computational Modelling of Bifurcations and Instabilities in Fluid Dynamics Alexander Gelfgat, 2018-07-06 Instabilities of fluid flows and the associated transitions between different possible flow states provide a fascinating set of problems that have attracted researchers for over a hundred years This book addresses state of the art developments in numerical techniques for computational modelling of fluid instabilities and related bifurcation structures as well as providing comprehensive reviews of recently solved challenging problems in the field

Thermo-Magnetic Systems for Space Nuclear Reactors Carlos O. Maidana, 2014-09-16 Introduces the reader to engineering magnetohydrodynamics applications and presents a comprehensive guide of how to approach different problems found in this multidisciplinary field An introduction to engineering magnetohydrodynamics this brief focuses heavily on the design of thermo magnetic systems for liquid metals with emphasis on the design of electromagnetic annular linear induction pumps for space nuclear reactors Alloy systems that are liquid at room temperature have a high degree of thermal conductivity far superior to ordinary non metallic liquids This results in their use for specific heat conducting and dissipation applications For example liquid metal cooled reactors are typically very compact and can be used in space propulsion systems and in fission reactors for planetary exploration Computer aided engineering CAE computational physics and mathematical methods are introduced as well as manufacturing and testing procedures An overview on space nuclear systems is also included This brief is an invaluable tool for design engineers and applied physicists as well as to graduate students in nuclear and mechanical engineering or in applied physics

Magnetohydrodynamics ,1999 *Encyclopedia of Geomagnetism and Paleomagnetism* David Gubbins, Emilio Herrero-Bervera, 2007-07-19 Understanding the process underlying the origin of Earth magnetic field is one of the greatest challenges left to classical Physics Geomagnetism being the oldest Earth science studies the Earth s magnetic field in its broadest sense The magnetic record left in rocks is studied in Paleomagnetism Both fields have applications pure and applied in navigation in the search for minerals and hydrocarbons in dating rock sequences and in unraveling past geologic movements such as plate motions they have contributed to a better understanding of the Earth Consisting of more than 300

articles written by ca 200 leading experts this authoritative reference encompasses the entire fields of Geomagnetism and Paleomagnetism in a single volume It describes in fine detail at an assessable level the state of the current knowledge and provides an up to date synthesis of the most basic concepts As such it will be an indispensable working tool not only for geophysicists and geophysics students but also for geologists physicists atmospheric and environmental scientists and engineers

Electrically Induced Vortical Flows V. Bojarevičs, Ya. Freibergs, E.I. Shilova, É.V. Shcherbinin, 2012-12-06 Every scientific subject probably conceals unexplored or little investigated strata which may show up at the proper time when favourable conditions coincide practical demands a circle of scientists prepared to recognize the novelty and capable of giving impetus to the development of a new theory etc Something like this occurred in early seventies for magnetohydrodynamics which at the time was considered to be a relatively complete branch of hydro dynamics with no apparent broad unexplored areas It was unexpectedly realized that in addition to the traditional methods of affecting an electrically conducting medium there is yet another way one which subsequently lead to a new direction in magnetohydrodynamics In the Soviet scientific literature this direction has been termed electrically induced vortex flows the essence of which are hydrodynamic effects due to the interaction of an electric current passing through the fluid with its own magnetic field It cannot be said that this direction was created ex nihilo individual studies related to the flows driven in a current carrying medium in the absence of external magnetic fields appeared in the sixties in the thirties the flows themselves were known to take place within electrical arcs and yet the first observations on the behaviour of liquid current carrying conductors were made at the beginning of this century

Liquid Metal Magnetohydrodynamics J.J. Lielpeteris, R.J. Moreau, 2012-12-06 Liquid metal MHD is within the scope of two series of international conferences One is the International Congress on MHD Power Generation held every four years which includes technical and economical aspects as well as scientific questions The other is the Beer Sheva Seminar on MHD Flows and Turbulence held every three years in Israel In addition to these well established meetings an IUTAM Symposium was previously organized in Cambridge UK in 1982 on Metallurgical Applications of MHD by the late Arthur Shercliff It was focussed on a very specific subject developing rapidly from the middle of the 1970 s The magnetic field was generally AC including frequencies high enough for the skin depth to be much smaller than the typical length scale of the liquid pool And the development of new technologies or the improvement of existing ones was the main justification of most of the researches presented and discussed Only two participants from Eastern countries attended this Symposium By the middle of the 1980 s we felt that on this very same topic ideas had reached much more maturity than in 1982 We also realized that a line of research on MHD flows related to fusion reactors tokamaks was developing significantly with particular emphasis on flows at large interaction parameter
