

The background of the book cover is a photograph of a forest at night. A bright, glowing aurora borealis is visible in the sky, with green and blue light streaks. The trees in the foreground are dark and silhouetted against the light.

Majestic Lights The Aurora In Science:

Majestic Lights, the Aurora in Science, History, and the Arts Robert H. Eather, 1980 Authoritative account written for the general reader

Observers of the Aurora Borealis in Europe Eric Chassefiere, 2023-08-15 The spectacular reappearance of the aurora borealis at the beginning of the 18th century often observed simultaneously from different observatories in Europe mobilized and federated a large community of astronomers on a European scale It encouraged them to communicate the results of their observations and in compiling exhaustive catalogs of information has helped to establish a system of the aurora borealis that can be further studied in the future according to the experimental method inherited from the previous century This book is dedicated to some of the main aurora observers in Europe and to the human institutional and philosophical context in which they evolved in the first half of the 18th century Its reading should be seen as a retrospective journey through the scholarly world of the Enlightenment during which the same scholars are frequently encountered and reen countered yet each time in different contexts or from different angles with the aim of compiling an account of the swarming of ideas and encounters that constituted the development of experimental science in this pivotal period

Sun, Earth and Sky Kenneth R. Lang, 2007-12-31 Written in a light and friendly style this lavishly illustrated book introduces the Sun and its physics and describes all aspects of the Sun s interaction with us on Earth The second edition of this book updates the popular text by providing comprehensive accounts of the most recent discoveries made by five modern solar spacecraft during the past decade It contains a number of images never before seen in print Breakthrough observations with the underground Sudbury Neutrino Observatory are also included The new edition further provides modern interpretations of ozone depletion and global warming

Campbell, 2001-02-07 An introductory guide to global magnetic field properties Earth Magnetism addresses in non technical prose many of the frequently asked questions about Earth s magnetic field Magnetism surrounds and penetrates our Earth in ways basic science courses can rarely address It affects navigation communication and even the growth of crystals As we observe and experience an 11 year solar maximum we may witness spectacular satellite destroying solar storms as they interact with our magnetic field Written by an acknowledged expert in the field this book will enrich courses in earth science atmospheric science geology meteorology geomagnetism and geophysics Contains nearly 200 original illustrations and eight pages of full color plates Largely mathematics free and with a wide breadth of material suitable for general readers Integrates material from geomagnetism paleomagnetism and solar terrestrial space physics Features nearly 200 original illustrations and 4 pages of colour plates

The Man Who Ate His Boots Anthony Brandt, 2011-03-22 After the triumphant end of the Napoleonic Wars in 1815 the British took it upon themselves to complete something they had been trying to do since the sixteenth century find the fabled Northwest Passage For the next thirty five years the British Admiralty sent out expedition after expedition to probe the ice bound waters of the Canadian Arctic in search of a route and then after 1845 to find Sir John Franklin the Royal Navy hero who led the last of these Admiralty expeditions Enthralling and often harrowing The Man Who Ate His Boots captures the glory and the folly of this ultimately tragic enterprise

Crossing Borders Michelle Ann Miller, Michael Douglass, Matthias Garschagen, 2017-12-06 This multidisciplinary book examines the diverse ways in which environmental disasters with compounding impacts are being governed as they traverse sovereign territories across rapidly urbanising societies in Asia and the Pacific Combining theoretical advances with contextually rich studies the book examines efforts to tackle the complexities of cross border environmental governance In an urban age in which disasters are not easily contained within neatly delineated jurisdictions both in terms of their interconnected causalities and their cascading effects governance structures and mechanisms are faced with major challenges related to cooperation collaboration and information sharing This book helps bridge the gap between theory and practice by offering fresh insights and contrasting explanations for variations in transboundary disaster governance regimes among urbanising populations in the Asia Pacific

Electron-Molecule Interactions and Their Applications L Christophorou, 2012-12-02 Electron Molecule Interactions

and Their Applications Volume 1 presents a comprehensive account of electron molecule interactions in high and ultra high pressure gases and liquids Topics covered include elastic scattering of electrons by molecules excitation ionization and dissociation of molecules by electron impact electron molecule resonances and electron attachment and detachment processes This volume is comprised of seven chapters and begins with a discussion on non resonant elastic scattering and rotational excitation of molecules by electrons followed by a review of non resonant vibrational and electronic excitation The reader is then introduced to resonance effects in electron scattering electron induced ionization and dissociation of molecules and electron molecule resonances The ionization mechanisms and types of ions produced are highlighted along with differential ionization cross sections The final two chapters focus on electron attachment and detachment processes paying particular attention to modes of electron capture by molecules such as via negative ion resonant states The collisional dynamics for a few selected atomic reactants are also described Physicists will find this book extremely helpful

Alfvén Waves and Static Fields in Magnetosphere/ionosphere Coupling David J. Knudsen, 1990 Perturbation electric and magnetic fields carry in excess of 10^{10} to 10^{12} W of electrical power between the magnetosphere and high latitude ionosphere Most of this power is generated by the solar wind The ionosphere at large spatial and temporal scales acts as a dissipative slab which can be characterized by its height integrated Pedersen conductivity σ_p so that the power flux into the ionosphere due to a quasi static electric field E is given by $\sigma_p E^2$ The energy transferred to the ionosphere by time varying electromagnetic fields in the form of Alfvén waves is more difficult to calculate because density and conductivity gradients can reflect energy Thus field resonances and standing wave patterns affect the magnitude and altitude distribution of electrical energy dissipation We use a numerical model to calculate the frequency dependent electric field reflection coefficient of the ionosphere and show that the ionosphere does not behave as a simple resistive slab for electric field time scales less than a few seconds Time variation of spacecraft measured high latitude electric and perturbation magnetic fields is difficult to distinguish from spatial structuring that has been Doppler shifted to a non zero frequency in the spacecraft frame However by calculating the frequency dependent amplitude and phase relations between fluctuating electric and magnetic fields we are able to show that low frequency fields

Russell, 1995-04-28 All aspects of space plasmas in the Solar System are introduced and explored in this text for senior undergraduate and graduate students Introduction to Space Physics provides a broad yet selective treatment of the complex interactions of the ionized gases of the solar terrestrial environment The book includes extensive discussion of the Sun and solar wind the magnetized and unmagnetized planets and the fundamental processes of space plasmas including shocks plasma waves ULF waves wave particle interactions and auroral processes The text devotes particular attention to space plasma observations and integrates these with phenomenological and theoretical interpretations Highly coordinated chapters written by experts in their fields combine to provide a comprehensive introduction to space
