Illustrated Pravir Malik,2023-12-03 This book is about Light It is a story of Light from an apparent beginning to the present and then also a story of that condition that transcends Time and is hence beginningless The exploration has been based on imagining light existing at multiple constant speeds and extrapolating the impact of such conceptual spaces on the physical universe Being so it is a cosmology it suggests a nature of the universe in which all that is is of Light Hence this book describes a Cosmology of Light A key aspect of the cosmology is the notion of quanta seen as a bridge mechanism that connects possibilities resident in other conceptual spaces to material existence The medium chosen to express this nature is mathematics Specifically as will be discovered a particular symmetrical function based mathematics is formulated to express the nature of the cosmos Further this illustrated version seeks to create a more visceral feel for the mathematics by depicting it with a range of art abstract literal pencil drawn computer generated and mythological There are over 150 illustrations in this book providing deeper insight into key aspects of the cosmology The cosmology describes how that which is unmanifest

manifests leveraging a light based quaternary view of quantum dynamics to do so In this view the Self is a mathematical key a mysterious variable that delving into the whole that it is can mathematically change the equilibrium of this dynamic creation This is represented symbolically by the quantization chakra in the cover illustration which brings possibilities resident in all the layers of light into practical material existence ushering in as it were a new type of endless creation where richness builds on richness and new types of super matter on previous super matter Nityarajya 3 Andi
