Swarm Intelligence Methods for Statistical Regression Soumya Mohanty, 2018-12-14 A core task in statistical analysis especially in the era of Big Data is the fitting of flexible high dimensional and non linear models to noisy data in order to capture meaningful patterns This can often result in challenging non linear and non convex global optimization problems The large data volume that must be handled in Big Data applications further increases the difficulty of these problems *Swarm Intelligence Methods for Statistical Regression* describes methods from the field of computational swarm intelligence SI and how they can be used to overcome the optimization bottleneck encountered in statistical analysis Features Provides a short self contained overview of statistical data analysis and key results in stochastic optimization theory Focuses on methodology and results rather than formal proofs Reviews SI methods with a deeper focus on Particle Swarm Optimization PSO Uses concrete and realistic data analysis examples to guide the reader Includes practical tips and tricks for tuning PSO to extract good performance in real world data analysis challenges

Computational Intelligence in Expensive Optimization Problems Yoel Tenne, Chi-Keong Goh, 2010-03-10 In modern science and engineering laboratory experiments are replaced by high fidelity and computationally expensive simulations Using such simulations reduces costs and shortens development times but introduces new challenges to design optimization process Examples of such challenges include limited computational resource for simulation runs complicated response surface of the simulation inputs outputs and etc Under such difficulties classical optimization and analysis methods may perform poorly This motivates the application of computational intelligence

methods such as evolutionary algorithms neural networks and fuzzy logic which often perform well in such settings This is the first book to introduce the emerging field of computational intelligence in expensive optimization problems Topics covered include dedicated implementations of evolutionary algorithms neural networks and fuzzy logic reduction of expensive evaluations modelling variable fidelity fitness inheritance frameworks for optimization model management complexity control model selection parallelization of algorithms implementation issues on clusters grids parallel machines incorporation of expert systems and human system interface single and multiobjective algorithms data mining and statistical analysis analysis of real world cases such as multidisciplinary design optimization The edited book provides both theoretical treatments and real world insights gained by experience all contributed by leading researchers in the respective fields As such it is a comprehensive reference for researchers practitioners and advanced level students interested in both the theory and practice of using computational intelligence for expensive optimization problems

Methodologies For The Conception, Design And Application Of Soft Computing -

Proceedings Of The 5th International Conference On Soft Computing And Information/Intelligent Systems (In 2 Volumes)

Gen Matsumoto, Takeshi Yamakawa, 1998-08-25 Soft computing is the common name for a certain form of natural information processing that has its original form in biology especially in the function of human brain. It is a discipline rooted in a group of technologies such as fuzzy logic, neural networks, chaos, genetic algorithms, probabilistic reasoning, and learning algorithms. Today, soft computing has become an acknowledged concept; however, for a long time, such components of soft computing have been debated and individually developed. Since its beginning in 1990, the series of IIZUKA conferences has covered various kinds of technologies that constitute soft computing. This series has played a pioneering role in promoting the development of a symbiotic relationship between the various technologies of soft computing. At IIZUKA 98, the 5th International Conference on Soft Computing and Information Intelligent Systems, new developments and results in this field were introduced and discussed by researchers from academic, governmental, and industrial institutions around the world. This volume presents the opening lecture by Prof. Walter J. Freeman, the keynote speech by Dr. Gen Matsumoto, the plenary lectures by 5 eminent researchers, and about 230 carefully selected papers drawn from more than 25 countries. It documents current research and in-depth studies on the fundamental aspects of soft computing and their practical applications.

Flexibility: A Concise Guide, Laurence E. Holt, Thomas E. Pelham, Jason Holt, 2009-11-27 In 1964, at the beginning of my PhD studies at Southern Illinois University, I was first introduced to the theory and practice of proprioceptive neuromuscular facilitation (PNF). One specific application, reversal of antagonists, particularly intrigued me and served as the focus of not only my dissertation but also numerous research projects, presentations, and publications over the ensuing years, including the monograph *Scientific Stretching for Sport* (1973). This was the first publication to present a simplified planar version of reversal of antagonists for enhancing flexibility.

Although I was repeatedly encouraged by friends and colleagues to write a more extensive text I knew that more laboratory research methodological fine tuning clinical information and significant changes to the conceptual foundations were needed before a truly meaningful book could be written Throughout my 36 years at Dalhousie University I have been fortunate to have had a number of excellent graduate students whose theses contributed much of this needed material Their work has been published in numerous academic journals and is referenced throughout this text

Intelligent Strategies for Meta Multiple Criteria Decision Making Thomas Hanne, 2012-12-06 Multiple criteria decision making research has developed rapidly and has become a main area of research for dealing with complex decision problems which require the consideration of multiple objectives or criteria Over the past twenty years numerous multiple criterion decision methods have been developed which are able to solve such problems However the selection of an appropriate method to solve a particular decision problem is today's problem for a decision support researcher and decision maker Intelligent Strategies for Meta Multiple Criteria Decision Making deals centrally with the problem of the numerous MCDM methods that can be applied to a decision problem The book refers to this as a meta decision problem and it is this problem that the book analyzes The author provides two strategies to help the decision makers select and design an appropriate approach to a complex decision problem Either of these strategies can be designed into a decision support system itself One strategy is to use machine learning to design an MCDM method This is accomplished by applying intelligent techniques namely neural networks as a structure for approximating functions and evolutionary algorithms as universal learning methods The other strategy is based on solving the meta decision problem interactively by selecting or designing a method suitable to the specific problem for example the constructing of a method from building blocks This strategy leads to a concept of MCDM networks Examples of this approach for a decision support system explain the possibilities of applying the elaborated techniques and their mutual interplay The techniques outlined in the book can be used by researchers students and industry practitioners to better model and select
