The Lost Language of Plants Stephen Harrod Buhner,2002-03-01 Nautilus Book Awards Ecology Environment ForeWord Reviews Book of the Year Silver Medal Environment In the pharmaceutical Silent Spring well known author teacher lecturer and herbalist

Stephen Harrod Buhner has produced a book that is certain to generate controversy Inside The Lost Language of Plants you

It finds a critique of technological medicine and especially the dangers to the environment posed by pharmaceuticals and other synthetic substances that people use in connection with health care and personal body care. A new look at Gaia Theory including an explanation that plants are the original chemistries of Gaia and those phytochemistries are the fundamental communications network for the Earth's ecosystems. Extensive documentation of how plants communicate their healing qualities to humans and other animals. Western culture has obliterated most people's capacity to perceive these messages but this book also contains valuable information on how we can restore our faculties of perception. The book will affect readers on rational and emotional planes. It is grounded in both a New Age spiritual sensibility and hard science. While some of the author's claims may strike traditional thinkers as outlandish, Buhner presents his arguments with such authority and documentation that the scientific underpinnings, however unconventional, are completely credible. The overall impact is a powerful eye-opening exposé of the threat that our allopathic Western medical system in combination with our unquestioning faith in science and technology poses to the primary life support systems of the planet. At a time when we are preoccupied with the terrorist attacks and the possibility of biological warfare, perhaps it is time to listen to the planet. This book is essential reading for anyone concerned about the state of the environment, the state of health care, and our cultural sanity.

The Directory of Museums & Living Displays Kenneth Hudson, Ann Nicholls, 1985-06-18 **Ethnopharmacology and OMICS Advances in Medicinal Plants Volume 2** Mukesh Nandave, Rohit Joshi, Jyoti Upadhyay, 2024-10-16 This book delves into diverse facets and applications of medicinal plants. It discusses the metabolic, transcriptomic, and genomic intricacies of medicinal plants, shedding light on their chemical compositions, genetic makeup, and regulatory mechanisms. It includes a chapter on nanotechnology investigating the influence of nanoparticles on medicinal plants. Subsequent chapters explore functional genomics and genome editing, showcasing innovative approaches to modifying plant genetics. It also discusses plant-associated microorganisms in the microbiome and endophytic fungi. Furthermore, the book addresses the critical issues of genetic diversity, agrotechnology for sustainable production, intellectual property rights, and the impact of various stresses on medicinal plants. This book serves as a valuable resource for researchers, educators, and students of pharmacology, offering a comprehensive understanding of medicinal plants and their evolving role in science and medicine.

A Natural History of Belize Samuel Bridgewater, 2012-01-20 A wide-ranging study that draws on local and regional research findings to provide a popular portrait of the biodiverse and resilient Chiquibul. Belize's Chiquibul Forest is one of the largest remaining expanses of tropical moist forest in Central America. It forms part of what is popularly known as the Maya Forest. Battered by hurricanes over millions of years, occupied by the Maya for thousands of years, and logged for hundreds of years, this ecosystem has demonstrated its remarkable ecological resilience through its continued existence into the twenty-first century. Despite its history of disturbance, or maybe in part because of it, the Maya Forest is ranked as an important regional biodiversity hot spot and provides some of the last regional habitats for endangered species such as the jaguar, the

scarlet macaw Baird's tapir and Morelet's crocodile *A Natural History of Belize* presents for the first time a detailed portrait of the habitats biodiversity and ecology of the Maya Forest and Belize more broadly in a format accessible to a popular audience It is based in part on the research findings of scientists studying at Las Cuevas Research Station in the Chiquibul Forest The book is unique in demystifying many of the big scientific debates related to rainforests These include Why are tropical forests so diverse How do flora and fauna evolve and How do species interact By focusing on the ecotourism paradise of Belize this book illustrates how science has solved some of the riddles that once perplexed the likes of Charles Darwin and also shows how it can assist us in managing our planet and forest resources wisely in the future
