Rick,Jon M. Erlandson,2008-04-29 Archaeological data now show that relatively intense human adaptations to coastal environments developed much earlier than once believed more than 125 000 years ago With our oceans and marine fisheries currently in a state of crisis coastal archaeological sites contain a wealth of data that can shed light on the history of human exploitation of marine ecosystems In eleven case studies from the Americas Pacific Islands North Sea Caribbean Europe and Africa leading researchers working in coastal areas around the world cover diverse marine ecosystems reaching into deep history to discover how humans interacted with and impacted these aquatic environments and shedding new light on our understanding of contemporary environmental problems [The Evolution of the Property Relation](#) A. Davis,2015-02-04 Evolution of the Property Relation defines an approach to economics which is centered around the concept of property and explores the historical evolution of the relationship of the individual private property and the state and the distinctive changes wrought by the emergence of the market *Aristotle on Female Animals* Sophia M. Connell,2016-01-14 Analyses the female in Aristotle s biology leading to a reassessment of his hylomorphism scientific methodology and psychology **Tropical Forests in Prehistory, History, and Modernity** Patrick Roberts,2019-01-03 In popular discourse tropical forests are synonymous with nature and wilderness battlegrounds between apparently pristine floral faunal and human communities and the unrelenting industrial and urban powers of the modern world It is rarely publicly understood that the extent of human adaptation to and alteration of tropical forest environments extends across archaeological historical and anthropological timescales This book is the first attempt to bring together evidence for the nature of human interactions with tropical forests on a global scale from the emergence of hominins in the tropical forests of Africa to modern conservation issues Following a review of the natural history and variability of tropical forest ecosystems this book takes a tour of human and human ancestor occupation and use of tropical forest environments through time Far from being pristine primordial ecosystems this book illustrates how our species has inhabited and modified tropical forests from the earliest stages of its evolution While agricultural strategies and vast urban networks emerged in tropical forests long prior to the arrival of European colonial powers and later industrialization this should not be taken as justification for the massive deforestation and biodiversity threats imposed on tropical forest ecosystems in the 21st century Rather such a long term perspective highlights the ongoing challenges of sustainability faced by forager agricultural and urban societies in these environments setting the stage for more integrated approaches to conservation and policy making and the protection of millennia of ecological and cultural heritage bound up in these habitats [Publishers' Circular and](#)
