*A Natural History of Seeing* Simon Ings, 2008 Ings work delves into both the evolution of sight and the evolution of the human understanding of sight The book presents the natural science while also addressing the history philosophy and mythology of how and why people see the way they do Illustrations throughout *No specimen left behind: mass digitization of natural history collections* Vincent Smith, 2012-07-20 Centuries of exploration and discovery have documented the diversity of life on Earth Records of this biodiversity are for the most part distributed across varied and distinct natural history collections worldwide This makes the task of extracting and mobilising the information within these collections an immense challenge In this special issue of ZooKeys 18 papers by 81 authors examine progress and prospects for mass digitising entire natural history collections These papers provide a snapshot of activity in what is a fast moving field that is seeing ever increasing degrees of collaboration across disciplines and between collection based institutions Examples of research covered by these articles include a description to efforts digitise 30 million plant invertebrate and vertebrate specimens at NCB Naturalis in the Netherlands new scanning and telemicroscopy solutions to digitise the millions of pinned insect specimens held in the Australian National Insect Collection and its European and North American counterparts citizen science projects being used to crowdsource the transcription of thousands of specimen labels and field notebooks and new data portals providing central access to millions of biological specimens across Europe Many of these projects deal with the unique challenges associated with major collections that have built up over several centuries with different communities of

**The Nature of Natural History** Marston Bates, 2014-07-14 This classic work is an exploration of what natural history is and a sustained effort to see how it relates to other areas of biology Marston Bates did not attempt to overwhelm his audience with facts or overinterpret those he did use and perhaps for this reason The Nature of Natural History is a timeless work The author's genuine interest in the tropics has a very current feeling and the first ten or fifteen chapters of the work have a style that is parallel to that of David Attenborough's verbal presentations of nature From the book I have already made several remarks about the connection between parasitism and degeneracy I suspect this is a matter of point of view We are predatory animals ourselves and consequently admire the characteristics of predation agility speed cunning self reliance We feel a certain kinship with the lion and regard the liver fluke with horror If a sheep were given the choice though it might prefer to be debilitated by liver flukes rather than killed by a lion Originally published in 1990 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
