Kahn, 2007-04-01 What is a green city What does it mean to say that San Francisco or Vancouver is more green than Houston or Beijing When does urban growth lower environmental quality and when does it yield environmental gains How can cities deal with the environmental challenges posed by growth These are the questions Matthew Kahn takes on in this smart and engaging book Written in a lively accessible style Green Cities takes the reader on a tour of the extensive economic literature on the environmental consequences of urban growth Kahn starts with an exploration of the Environmental Kuznets Curve EKC the hypothesis that the relationship between environmental quality and per capita income follows a bell shaped curve He then analyzes several critiques of the EKC and discusses the implications of growth in urban population and surface area as well as income The concluding chapter addresses the role of cities in promoting climate change and asks how cities in turn are likely to be affected by this trend As Kahn points out although economics is known as the dismal science economists are often quite optimistic about the relationship between urban development and the environment In contrast many ecologists and environmentalists remain wary of the environmental consequences of free market growth Rather than try to settle this dispute this book conveys the excitement of an ongoing debate Green Cities does not provide easy answers complex dilemmas It does something more important it provides the tools readers need to analyze these issues on their own

**Micro And Macro-Level Approaches For Assessing The Value of Irrigation Water**

Robert C. Johansson, 2005 Abstract Many countries are reforming their economies and setting macroeconomic policies that have direct and indirect impact on the performance of the irrigation sector One reason for the movement toward reform in the water sector across countries is that water resources are increasingly becoming a limiting factor for many human activities Another reason for increased pressures to address water policy issues is that many countries are in the process of removing barriers to trade particularly in agricultural commodities Therefore knowledge of the value of water when crafting

domestic and macroeconomic policies is important to compare the variable impacts of reform across sectors of the economy and populations within the country Researchers have used many methods for assessing the value of irrigation water This survey reviews a broad literature to ascertain how two basic questions have been addressed by research over the past few decades First what is the value of water across different sectors and levels Second how will this value change under different macroeconomic and domestic policies This survey details a number of methods for approaching these two questions The literature has been organized according to a progression from theoretical underpinnings to empirical approaches to how the value of irrigation services are relevant to the link between globalization and poverty
