Human Heredity in the Twentieth Century Bernd Gausemeier, 2015-10-06 The essays in this collection examine how human heredity was understood between the end of the First World War and the early 1970s The contributors explore the interaction of science medicine and society in determining how heredity was viewed across the world during the politically turbulent years of the twentieth century

Blood Groups and Human Heredity, 1900-1950 William H. Schneider, 2024-11-29 This monograph presents a detailed analysis of the beginning and rapid establishment of blood group research in the first half of the twentieth century The main theme of this book is how blood groups were used as a scientific explanation of differences in race health and human behaviour The discovery of the inheritance of blood groups and their uneven distribution among various human populations quickly developed into a new field of scientific study in various countries around the world Almost as quickly the discoveries were studied as genetic markers of race disease and behaviours such as crime insanity and temperament The time scope of coverage is the first half of the twentieth century beginning with Landsteiner s discovery of blood groups and ending with the period following the Second World War when the research was picked up again and became part of the revolution in human genetics accelerated by the discovery of the double helix By this time blood group genetics had undermined the very concept of race and became the foundation of population genetics The focus on the formative period of blood group research complements the recent resurgence of interest in the subject by providing in depth background and a base for further research

Love and Eugenics in the Late Nineteenth Century Angelique Richardson, 2003 The idea of eugenics human selective breeding originated in Victorian Britain in response to the urban poor Darwin s evolutionary theory had laid the foundations for eugenics replacing paradise with primordial slime Man had not fallen from Grace but risen from the swamps And as architect of his own destiny he might rise still further Eugenics was developed by Darwin s cousin Francis Galton in the 1860s Embracing the idea of evolution eugenists argued that through the judicious control of human reproduction and the numerical increase of the middle class Britain s supremacy in the world could be maintained Born and bred among the competitive Victorian middle class eugenics was a biologicistic discourse on class Aiming at racial improvement by altering the balance of class in society it was Galton argued practical Darwinism Eugenics found its most sustained expression in fiction and the periodical press and was central to late nineteenth century ideas on social progress forming part of the debate between hereditarians and environmentalists that peaked in the closing years of the century Even Gladstone had his vital statistics measured in Galton s eugenic laboratory Among the champions of eugenics were social purity feminists and New Women writers such as George Egerton Ellice Hopkins and Sarah Grand who argued that women were naturally biologically moral and that through rational reproduction middle class women could regenerate the British imperial race The New Woman has been the subject of numerous recent critical works However the oppressive ideas that coexisted with the emancipatory theories of some New Women ideas that were supremely

class conscious remain largely unexamined as the focus remains on her more progressive aspects Love and Eugenics in the Late Nineteenth Century recontextualizes New Woman writers demonstrating that they were as concerned with the questions of poverty sickness and health as they were with the changing role of women the issue for which they are currently generally known and celebrated Focusing on fiction and the press and drawing on the papers and published work of Galton and other eugenists Angelique Richardson reveals the cultural pervasiveness of eugenics and explores for the first time the intimate relations between early feminism and eugenics and making a radical contribution to nineteenth century studies

A History of British Eugenics since 1865 David Redvaldsen,2024-11-09 This book examines British eugenics from its origins in 1865 to the early 1990s It considers the two institutions promoting the doctrine the Galton Laboratory attached to the University of London and the Eugenics Society It charts internal and ideological changes across more than a century seeing eugenics as primarily a political movement The doctrine had influence on British society and guided adherents ranging from scientists to charitable ladies The Galton Laboratory published detailed studies of heredity It transformed itself into a centre for medical genetics after the Second World War As early as the 1920s the Eugenics Society was the mainspring of the doctrine formulating what became the British version of an international ideology It began as applied social Darwinism later incorporating a greater degree of meritocracy and amelioration Its support for sterilization in the 1930s eroded the kudos it had gained in policy making circles From the 1960s organized eugenics was especially a forum for learned and popular discussion of biology and sociology Medical advances after 1970 aided its continuation notably the growth of assisted reproductive technologies The book presents British eugenics as mostly shaped by domestic concerns offering new revelations and interpretations with the capacity to readjust historical thinking It also covers contemporary bioethical and political issues aligned to eugenics

Humanity and Nature in Economic Thought Gábor Bíró,2021-11-29 Humanity and Nature in Economic Thought Searching for the Organic Origins of the Economy argues that organic elements seen as incompatible with rational homo economicus have been left out of or downplayed in mainstream histories of economic thought The chapters show that organic aspects that is aspects related to sensitive cognitive or social human qualities were present in the economic ideas of a wide range of important thinkers including Hume Smith Malthus Mill Marshall Keynes Hayek and the Polanyi brothers Moreover the contributors to this thought provoking volume reveal in turn that these aspects were crucial to how these key figures thought about the economy This stimulating collection of essays will be of interest to advanced students and scholars of the history of economic thought economic philosophy heterodox economics moral philosophy and intellectual history

 Way Forward for Education Adam C. Scarfe, 2022-12-01 This book pinpoints the evolutionary connection between the global
 ecological crisis and transgenerational learning and education As Julian Huxley 1887 1975 described the cumulative passing
 down of knowledge skills and ideas by one generation to the next over eons of time which has been afforded by the advent of
 complex languages in the evolutionary past is chiefly responsible for humanity s planetary superdominance However given
 that the drive of the human species to increase its control over the natural world has today run up against ecological limits
 there is an evolutionary existential choice to be made in relation to the ultimate purposes of formal education Should
 humanity double down on the anthropocentric humanist project of superdominance including the goals of unlimited economic
 growth development and scientific and technological progress Alternatively should a biocentric anti humanist and or
 postmodernist deconstruction of formal education take place Or should a holistic organicist orientation emphasizing
 biological wisdom help to shape its future As this book shows the answers to these philosophical questions on the parts of
 educators prospective teachers and learners will going forward play a key role in deciding the evolutionary trajectories of all
 life forms on the planet The Cumulative Book Index ,1911 A world list of books in the English language **The
 Wellborn Science** Mark B. Adams, 1990 The four contributors to this volume examine the eugenics movements in Germany
 France Brazil and the Soviet Union and describe how geneticists and physicians participated in the development of policies
 concerning the improvement of hereditary qualities in humans They examine the scientific components of those programs
 and discuss the involvement of social religious and political forces that significantly altered the original scientific goals The
 book opens up new and comparative perspectives on the history of eugenics and the social uses of science in general
Human Population Genetics P.P. Majumder, 2012-12-06 J B S Haldane R A Fisher and Sewall Wright simultaneously and
 largely independently laid the foundations of population genetics and the mathematical theory of evolution Hal dane was
 born on November 5 1892 Although he primarily worked at the University College London UCL in 1957 he resigned from the
 UCL and joined the Indian Statistical Institute Calcutta India as a Research Professor In celebration of his birth centenary the
 Indian Statistical Institute organized an International Conference on Human Genetics from 15 to 19 December 1992 The
 prime motive in holding this Conference was to bring together a group of scientists geneticists anthropologists clinicians and
 statisticians to evaluate the impact of Haldane s contributions to various areas of human genetics and also to review recent
 developments in the subject Session and lecture themes were so chosen that they covered areas theoretical and applied
 classical and emerging Speakers were then identified and invited to deliver lectures on these themes Manuscripts of all

invited presentations and a selected number of contributed presentations were considered for inclusion in this Proceedings Volume Each manuscript was reviewed by at least one Conference participant which resulted in revision of several manuscripts and rejection of some This volume is a collection of the manuscripts which have been accepted after the review process The Conference began with the J B S Haldane Centenary Lecture delivered by C R Rao *Genetic Seeds of Warfare* R. Paul Shaw, Yuwa Wong, 2020-12-22 For millennia humanity has simultaneously deplored and waged war With each conflict the stakes have risen and we now face global annihilation for the sake of a practice all the world claims to condemn Is there some seemingly irresistible force that impels us toward our own destruction To explain this central paradox of human behaviour *Genetic Seeds of Warfare* originally published in 1989 advances a startling new theory It traces the origins of warfare back to early groups of Homo sapiens in competition for scarce resources showing that warfare evolved as these groups evolved kin group against kin group tribe against tribe nation against nation Rather than being tied to a specific gene warfare emerged as one of many behavioural strategies for maximising genetic survival As social groups became more complex motivations for warfare developed from simple protection of blood relations to political appeals to shared ethnicity religion and national identity But the ultimate cause of warfare is rooted in the most basic of human drives the need to ensure that one's genes will survive and reproduce The authors challenge many assumptions about human behaviour in general and warfare in particular They convincingly present the case for an evolutionary understanding of the propensity for warfare supporting their argument with data from a vast array of social and natural science research In doing so they reveal why previous attempts at ending war have failed and make proactive suggestions toward the development of a new agenda for world peace

From Eve to Evolution Kimberly A. Hamlin, 2014-05-08 *From Eve to Evolution* provides the first

full length study of American women s responses to evolutionary theory and illuminates the role science played in the nineteenth century women s rights movement Kimberly A Hamlin reveals how a number of nineteenth century women raised on the idea that Eve s sin forever fixed women s subordinate status embraced Darwinian evolution especially sexual selection theory as explained in The Descent of Man as an alternative to the creation story in Genesis Hamlin chronicles the lives and writings of the women who combined their enthusiasm for evolutionary science with their commitment to women s rights including Antoinette Brown Blackwell Eliza Burt Gamble Helen Hamilton Gardener Charlotte Perkins Gilman and Elizabeth Cady Stanton These Darwinian feminists believed evolutionary science proved that women were not inferior to men that it was natural for mothers to work outside the home and that women should control reproduction The practical applications of this evolutionary feminism came to fruition Hamlin shows in the early thinking and writing of the American birth control pioneer Margaret Sanger Much scholarship has been dedicated to analyzing what Darwin and other male evolutionists had to say about women but very little has been written regarding what women themselves had to say about evolution From Eve to Evolution adds much needed female voices to the vast literature on Darwin in America **Hormones, Heredity, and Race**

Cheryl A. Logan, 2013-03-20 Early in the twentieth century arguments about nature and nurture pitted a rigid genetic determinism against the idea that genes were flexible and open to environmental change This book tells the story of three Viennese biologists Paul Kammerer Julius Tandler and Eugen Steinach who sought to show how the environment could shape heredity through the impact of hormones It also explores the dynamic of failure through both scientific and social lenses During World War I the three men were well respected scientists by 1934 one was dead by his own hand another was in exile and the third was subject to ridicule Paul Kammerer had spent years gathering zoological evidence on whether environmental change could alter heredity using his research as the scientific foundation for a new kind of eugenics one that challenged the racism growing in mainstream eugenics By 1918 he drew on the pioneering research of two colleagues who studied how secretions shaped sexual attributes to argue that hormones could alter genes After 1920 Julius Tandler employed a similar concept to restore the health and well being of Vienna s war weary citizens Both men rejected the rigidly acting genes of the new genetics and instead crafted a biology of flexible heredity to justify eugenic reforms that respected human rights But the interplay of science and personality with the social and political rise of fascism and with antisemitism undermined their ideas leading to their spectacular failure **History of Humanity** UNESCO, 2008-12-31 This is the seventh and final volume in this comprehensive guide to the history of world cultures throughout historical times
