Natural History Of Weasels And Stoats:

The Natural History of Weasels and Stoats Carolyn M. King, Roger A. Powell, 2006-10-12 Field naturalists have observed the activities of weasels for centuries Their descriptions were often accurate but sometimes misinterpreted the animals behaviors and underlying explanations for those behaviors Organized natural history became one of the roots of the science of ecology in the 1920s and by the 1960s scientists had begun to study the biology of weasels with all the critical objective advantages of modern theory and equipment Until the first edition of this book appeared in 1989 no one had attempted to explain these results to non specialist naturalists Now thoroughly revised this book will continue to be the main one stop reference for professionals But both kinds of knowledge are brought together here observations for the traditional naturalist and rigorous measurements and interpretations for modern scientists integrated into a single readable account This new edition provides a comprehensive summary of the extensive advances over the last 15 years in our knowledge of these fascinating animals A new U S based co author reshapes the content to be more U S centric Stories about North America trappers and backwoodsmen interacting with weasels replace some not all of the previous stories about English gamekeepers These changes permeate the book so readers familiar with the first edition will recognize some material but will find a lot that is new Much less reliable European information quoted in the first edition was there at the time when no better information was available Now a new NZ chapter focuses on predation problems of the species introduced to that country This edition much more than a simple update is now truly an international treatment and a more valuable resource

King, 2019-12-12 The story of invasive species in New Zealand is unlike any other in the world By the mid thirteenth century the main islands of the country were the last large landmasses on Earth to remain uninhabited by humans or any other land mammals New Zealand's endemic fauna evolved in isolation until first Polynesians and then Europeans arrived with a host of companion animals such as rats and cats in tow Well equipped with teeth and claws these small furry mammals along with the later arrival of stoats and ferrets have devastated the fragile populations of unique birds lizards and insects Carolyn M King brings together the necessary historical analysis and recent ecological research to understand this long slow tragedy As a comprehensive historical perspective on the fate of an iconic endemic fauna this book offers much needed insight into one of New Zealand's longest running national crises *Stoat in the Dock* Carolyn M. King, 2025-05-07 This book surveys the ecology of stoats resident in New Zealand since the 1880s when they were deliberately imported from UK as potential agents of biological control against rabbits Our current understanding of them and of their impacts on the communities of native animals and birds with which they now live has developed over decades of research Past knowledge is essential to inform future decisions on when where and how to minimize damage from stoats in the future New Zealand is one of the most significant known examples of the drastic impacts of invasive predators on endemic species and communities but its story is largely unfamiliar to international audiences This is a detailed academically rigorous and fully documented account of how introduced mustelids have made themselves at home in New Zealand written by a specialist stoat biologist as a single coherent story Each chapter includes a section explaining the context in which the most important details of the biology of stoats and to a lesser extent ferrets have been documented what techniques worked and what did not and why The book is written primarily for the well informed general public plus a cross disciplinary

audience of academics senior undergraduates and postgraduates interested in the history of interactions between predators and native wildlife and professionals working on invasive species in New Zealand and elsewhere It will be of special interest to conservationists birdwatchers and naturalists *The Handbook of New Zealand Mammals* Carolyn King, David Forsyth, 2021-01-20 The Handbook of New Zealand Mammals is the only definitive reference on all the land breeding mammals recorded in the New Zealand region including the New Zealand sector of Antarctica It lists 65 species including native and exotic wild and feral living and extinct residents vagrants and failed introductions It describes their history biology and ecology and brings together comprehensive and detailed information gathered from widely scattered or previously unpublished sources The description of each species is arranged under standardised headings for easy reference Because the only native land breeding mammals in New Zealand are bats and seals the great majority of the modern mammal fauna comprises introduced species whose arrival has had profound effects both for themselves and for the native fauna and flora The book details changes in numbers and distribution for the native species and for the arrivals it summarises changes in habitat diet numbers and size in comparison with their ancestral stocks and some of the problems they present to resource managers For this third edition the text and references have been completely updated and reorganised into Family chapters The colour section includes 14 pages of artwork showing all the species described and their main variations plus two pages of maps *The Natural History and Antiquities of Selborne* Gilbert White, 1895 **Silent Fields** Roger Lovegrove, 2008-09-18 Since time immemorial mankind has taken it upon himself to wage war against nature against those species of birds and mammals which he believes conflict with his livelihood This remarkable book documents the history of that battle in England and Wales from the Middle Ages shedding a new light on the history of our much loved wildlife *The Natural History and Antiquities of Selborne. With Observations on Various Parts of Nature and The Naturalist's Calendar ...* Gilbert White, 1880 *Analysis of vertebrate predator-prey community* Vadim Sidorovich, 2011-09-01 This monograph is about predation in vertebrate animal community The studies were done in the seminatural terrains with transitional mixed forest within the European forest zone in Belarus The result part was organised as a top down flow First the community characteristics related to predators were estimated I presented data on predator species richness population density and biomass with special attention paid to the changes in predator species diversity occurred during the last two centuries and particularly in connection with the American mink and raccoon dog naturalization Then the main features of predator food niches were given and the structure of various predator guilds and size structure in predators were analysed The next part of the monograph was devoted to examining of community important factors acting in semi natural terrains Such factors affected either the whole community or its marked fragment The last quite a large part of the monograph consisted of many chapters which present more or less essential results on different predator species and stresses hot questions of their population ecology **The Victoria History of the County of Buckingham: Natural history, early man, Domesday**
