qualitative analyses this book objectively evaluates the spatial distribution characteristics and coupling relationship of China's natural resource utilization based on the status quo and prominent problems during resource utilization. Moreover, the environmental, economic, and price fluctuation effects of China's natural resource utilization are discussed. Finally, current policy systems for efficient utilization of natural resources in China and abroad are provided, which suggest a way for China to achieve efficient utilization of natural resources through an appropriate policy mechanism. This book aims to seek the balance between the utilization of natural resources and sustainable development in China. It puts forward a new paradigm of natural resource utilization by incorporating the efficiency evaluation, coordination measures, and effect mechanisms of different kinds of natural resources. The evaluation system and related research methods for the efficient utilization of natural resources are very mature, laying a foundation for the development of this book's content. As the conservation of natural resources is widely accepted, this book helps readers understand how to achieve efficient natural resource utilization in China. Meanwhile, the study of resource utilization in China can provide insights for other countries.

Watershed Development Projects in India J. M. Kerr, Ganesh Pangare, Vasudha Pangare, 2002-01-01. The Green Revolution that transformed irrigated agriculture elsewhere in India had little effect in the rainfed semi arid regions. Agricultural productivity remained low, natural resources were degrading, and the people were poor. In the 1980s and 1990s, planners turned to watershed management to develop rainfed agriculture while conserving natural resources. By the late 1990s, India was spending US 500 million a year on watershed development projects. Strategies ranged from the purely technical to those that emphasized social organization. Little systematic analysis exists, however, on the success of the different approaches. This study, based on a survey of 86 villages in Andhra Pradesh and Maharashtra states, attempts to fill that information gap by evaluating the projects' relative success in raising agricultural productivity, improving natural resource management, and reducing poverty. In looking at the question of what approaches enable a project to succeed, it uses both quantitative and qualitative analysis to compare project and nonproject villages before and after the projects were implemented. The authors find that projects involving the villagers in planning and decisionmaking performed better than their technocratic top-down counterparts, but projects that combined participation with sound technical input performed best of all. All projects faced difficulties in ensuring that poor people shared the benefits of watershed development.
