**Food and Agricultural Wastewater Utilization and Treatment** Sean X. Liu, 2008-02-28 Food and Agricultural Wastewater Utilization and Treatment focuses on the cost effective treatment technologies specific for food and agriculture wastewater and possible economical recovery of valuable substances from wastewater during common food processing and postharvest operations using innovative technologies The technologies included in the book are not a

mere collection of all known relevant technologies. Instead, priority consideration is given to those technologies that can not only solve the environmental problem of wastewater disposal but also reduce the wastewater management cost in the long run for food and agriculture industries. The book combines past decades of research on food and agricultural wastewater issues with an abundance of emerging research on innovative separation technologies to separate biological molecules from complex biological systems. Food technologists as well as environmental and agricultural engineers/scientists will find *Food and Agricultural Wastewater Utilization and Treatment* invaluable in their quest of improving food and agricultural wastewater management.

**Water Reclamation Technologies for Safe Managed Aquifer Recharge** Christian Kazner, Thomas Wintgens, Peter Dillon, 2012-04-14. Part of Groundwater Set. Buy all six books and save over 30% on buying separately. *Water Reclamation Technologies for Safe Managed Aquifer Recharge* has been developed from the RECLAIM WATER project supported by the European Commission under Thematic Priority Global Change and Ecosystems of the Sixth Framework Programme. Its strategic objective is to develop hazard mitigation technologies for water reclamation providing safe and cost-effective routes for managed aquifer recharge. Different treatment applications in terms of behaviour of key microbial and chemical contaminants are assessed. Engineered as well as natural treatment trains are investigated to provide guidance for sustainable MAR schemes using alternative sources such as effluent and stormwater. The technologies considered are also well suited to the needs of developing countries which have a growing need of supplementation of freshwater resources. A broad range of international full-scale case studies enables insights into long-term system behaviour, operational aspects and fate of a comprehensive number of compounds and contaminants, especially organic micropollutants and bulk organics. *Water Reclamation Technologies for Safe Managed Aquifer Recharge* depicts advances in water reclamation technologies and aims to provide new process combinations to treat alternative water sources to appropriate water quality levels for sustainable aquifer recharge. Editors: Christian Kazner, RWTH Aachen University, Germany; Thomas Wintgens, University of Applied Sciences and Arts, Northwestern Switzerland; Peter Dillon, CSIRO, Australia.

**Natural Systems for Wastewater Treatment in Warm Climate Regions** Livia Garcia Gil, 2014. Water scarcity and the high costs of new water supply technologies are the two major factors responsible for the increasing recognition of the importance to conserve water resources by wastewater treatment reuse or reclamation. Sustainability of sanitation systems should be related to low-cost, low-energy consumption and operation and maintenance requirements, especially for small communities in developing countries. Hence, natural systems for wastewater treatment seem to be a suitable solution. In this study, a review of two natural systems, constructed wetlands and stabilization ponds, was carried out. Their strengths and weaknesses of both systems have been analysed. Furthermore, this dissertation evaluates the robustness of a pilot-scale hybrid constructed wetland system to cope with a heavy rain episode, a characteristic phenomenon in tropical climate regions.
