Nature And Culture In Western Discourses:

Nature and Culture in Western Discourses Stephen Horigan, 2014-04-08 How unique is man How much are we bound by a common nature To what extent is culture an expression of instinct Such questions have haunted the development of social theory In this fascinating book Stephen Horigan argues that our thinking on these matters has been bedevilled by the enlightenment distinction between nature and culture He criticizes this on the grounds that terms such as nature culture human and animal are ambiguous He uses the themes of wildness and primitivism and cases of feral children to illustrate his argument *Nature and Culture in Western Discourses* Stephen Horigan, *Dictionary of Concepts in Cultural Anthropology* Robert H. Winthrop, 1991-11-18 The field of cultural anthropology describes and interprets the thought and behavior of contemporary and near contemporary societies Inherently pluralistic it offers a framework in which the distinctive perspectives of each cultural world can be appreciated Robert Winthrop's dictionary describes the major concepts that have shaped the discipline both historically and theoretically It sets modern anthropology in its proper context within the broader intellectual tradition Eighty entries review the key concepts culture race nature symbolism adaptation the primitive etc that have established the fundamental problems and issues guided research and served as the focus for debate in key areas of the discipline The entries which range from 2 000 to 6 000 words in length are both thorough in treatment and contemporary in relevance Some entries are primarily of historical significance while others describe recent developments Each entry contains an annotated bibliography and a guide to additional reading on the subject While this is not primarily a technical lexicon many terms have been glossed and explained Designed to be useful to students of anthropology this dictionary will assist those in other disciplines to find their way through the anthropological labyrinth *A Research Agenda for Heritage Tourism* Maria Gravari-Barbas, 2020-12-25 This timely Research Agenda moves beyond classic approaches that consider the relationship between heritage and tourism either as problematic or as a factor for local development and instead adopts an understanding of heritage and tourism as two reciprocally supported social phenomena that are co produced **Nature and Culture in Western Discourses** S. D. Horigan, University of Essex, 1987 **Concise Routledge Encyclopedia of Philosophy** Routledge (Firm), 2000 The scholarship of this monumental and award winning ten volume work is available in one affordable book that brings together more than 2 000 entries from the original in a shortened more accessible format Extensively cross referenced and indexed **Tourism, Recreation, and Sustainability** Stephen F. McCool, R. Neil Moisey, 2008 Sustainable development is the single most important consideration for those working in the tourism industry Presenting a discussion by leading contributors on the impacts of tourism on local culture and the environment this new edition moves forward the debates in sustainable tourism covering new locations concepts and perspectives and new case studies providing a global outlook for a universal issue From publisher's description [Nature](#) Peter Coates, 2013-04-26 Nature is a deceptively simple and ahistorical term suggesting intrinsic unchanging reality Yet

nature has a history too both in terms of human attitudes and human impacts Coates outlines the major understandings of nature in the western world since classical times from nature as higher authority to its more recent meaning of threatened physical space and life forms Unlike many others this book places the history of attitudes to nature within the story of human induced changes in the material environment And few others take a supranational perspective or cross the divides between historical eras A distinctive unifying theme is Coates s interest in how green writers over the last thirty years have interpreted our past dealings with nature specifically their efforts to diagnose the roots of contemporary ecological problems and their search for ancestors He concludes with a discussion of the future of nature in the context of developments such as the new ecology global warming advances in genetic engineering and research on animal behaviour Assuming no previous knowledge Nature provides the reader with an accessible synthesis and introduction to some of environmental history s central features and debates confirming its status as one of the most enthralling current pursuits within historical studies This will be essential reading for second year undergraduates and above in cultural history and environmental history as well as to the general reader interested in environmental issues

Religion and Sustainable Agriculture Todd LeVasseur, Pramod Parajuli, Norman Wirzba, 2016-10-21 Distinct practices of eating are at the heart of many of the world s faith traditions from the Christian Eucharist to Muslim customs of fasting during Ramadan to the vegetarianism and asceticism practiced by some followers of Hinduism and Buddhism What we eat how we eat and whom we eat with can express our core values and religious devotion more clearly than verbal piety In this wide ranging collection eminent scholars theologians activists and lay farmers illuminate how religious beliefs influence and are influenced by the values and practices of sustainable agriculture Together they analyze a multitude of agricultural practices for their contributions to healthy ethical living and environmental justice Throughout the contributors address current critical issues including global trade agreements indigenous rights to land and seed and the effects of postcolonialism on farming and industry Covering indigenous Buddhist Hindu Christian Muslim and Jewish perspectives this groundbreaking volume makes a significant contribution to the study of ethics and agriculture

Loving Nature Kay Milton, 2003-09-01 As the full effects of human activity on Earth s life support systems are revealed by science the question of whether we can change fundamentally our relationship with nature becomes increasingly urgent Just as important as an understanding of our environment is an understanding of ourselves of the kinds of beings we are and why we act as we do In *Loving Nature* Kay Milton considers why some people in Western societies grow up to be nature lovers actively concerned about the welfare and future of plants animals ecosystems and nature in general while others seem indifferent or intent on destroying these things Drawing on findings and ideas from anthropology psychology cognitive science and philosophy the author discusses how we come to understand nature as we do and above all how we develop emotional commitments to it Anthropologists in recent years have tended to suggest that our understanding of the world is shaped solely by the culture in which we live Controversially Kay Milton argues that it is shaped by direct

experience in which emotion plays an essential role The author argues that the conventional opposition between emotion and rationality in western culture is a myth The effect of this myth has been to support a market economy which systematically destroys nature and to exclude from public decision making the kinds of emotional attachments that support more environmentally sensitive ways of living A better understanding of ourselves as fundamentally emotional beings could give such ways of living the respect they need *Unity Of Nature, The: Wholeness And Disintegration In Ecology And Science* Alan Marshall, 2002-10-04 The idea behind The Unity of Nature is a strong theoretical theme in a number of scientific and environmental fields from ecosystems ecology through quantum physics to environmental philosophy and ecopolitics giving rise to an inspiring optimistic socially responsive and environment friendly worldview The fields of science and environmentalism have inherited this theme of natural unity through an intellectual lineage that encompasses many non scientific and non environmental fields such as sociology theology and political philosophy Many of these fields have used natural unity in a way which is in stark opposition to the metaphysical and political desires of those who promulgate the unity of nature for progressive social change This book discusses how this has transpired and examines the social and intellectual processes that have been at work These include the social construction of the Organicism versus Mechanicism debate in ecology the intellectual links between neo classical economic principles and the New Sciences the techno scientific background of Gaia theory and the social conservatism of ecological functionalism **Recognizing the Autonomy of Nature** Thomas Heyd, 2005-11-09 How do the ways in which we think about and describe nature shape the use and protection of the environment Do our seemingly well intentioned efforts in environmental conservation reflect a respect for nature or our desire to control nature s wildness The contributors to this collection address these and other questions as they explore the theoretical and practical implications of a crucial aspect of environmental philosophy and policy the autonomy of nature In focusing on the recognition and meaning of nature s autonomy and linking issues of metaphysics epistemology ethics and policy the essays provide a variety of new perspectives on human relationships to nature The authors begin by exploring what is meant by nature in what sense it can be seen as autonomous and what respect for the autonomy of nature might entail They examine the conflicts that arise between the satisfaction of human needs food shelter etc and the natural world The contributors also consider whether the activities of human beings contribute to nature s autonomy In their investigation of these issues they not only draw on philosophy and ethics they also discuss how the idea of nature s autonomy affects policy decisions regarding the protection of agricultural rural and beach areas The essays in the book s final section turn to management and restoration practices The essays in this section pay close attention to how efforts at environmental protection alter or reinforce the traditional relationship between humans and nature More specifically the contributors examine whether management practices as they are applied in nature conservation actually promote the autonomy of nature or whether they turn the environment into a client for policymakers *Women and Nature?* Douglas Vakoch, Sam

Engaging and Transforming Global Communication through Cultural Discourse
Analysis Trudy Milburn,Michelle Scollo,2018-11-13 Global communication can be difficult in the best of circumstances The

contributors in this book take seriously the premise that one can examine communication within specific global settings and scenes with the goal of ensuring that the meanings made among those within specific communities is more clearly understood. This includes recognizing that we often communicate based on specific assumptions and act in ways that have normative bases that are shared with those within communities but are often difficult to discern or navigate by those who are not members of them. Situated within the Ethnography of Communication research program, the contributors in this volume use Cultural Discourse Analysis to examine such practices, a theory and methodology developed by Donal Carbaugh over the past thirty years. The book is a celebration of his work and career in which forty-four prominent Communication scholars and practitioners come together to use this framework to examine pressing communication issues across the globe. The book includes a preface by Gerry Philipsen that is an academic history of Carbaugh's career, an introduction outlining the history and current practice of Cultural Discourse Analysis, sixteen data-based chapters using the framework to examine a broad range of inter-cultural communication practices across the globe, and an epilogue by Carbaugh reviewing this research and its future trajectory. The book is a handbook of Cultural Discourse Analysis for examining the latest in Cultural Discourse Analysis research and learning how to do such work that will be useful to advanced undergraduate and graduate students in a broad range of fields, inter-cultural communication scholars, and all those who seek to better understand and communicate in the global world today.

The Environment Philip W. Sutton, 2007-04-09 Philip Sutton shows how questions about the environment cannot be properly answered without taking a sociological approach. He provides a comprehensive guide to the ways in which sociologists have responded to the challenge of environmental issues as diverse as global warming, ozone depletion, marine pollution.

The Green Studies Reader Laurence Coupe, 2000 Laurence Coupe brings together a collection of extracts from a wide range of both historical and contemporary ecocritical texts.

Early Childhood Education for Sustainability Julie M. Davis, Sue Elliott, Eva Årlemalm-Hagsér, 2024-11-30 This book presents an historical and contemporary overview of Early Childhood Education for Sustainability (ECEfS). It is written by pioneering Australian and Swedish researchers and includes commentary from other key academics in the field. It traces ECEfS from its 1980s origins through to contemporary shifts in policy, theory, and practice, and considers significant learnings and future directions. It frames this rich and diverse history through changes in thinking about children, educators, nature, environment, dualities, and sustainability, and how re-conceptualisations might further advance ECEfS. This book offers fresh perspectives on how sustainability and climate change can be positively addressed with, by, and for our youngest citizens, especially in times of increasing uncertainty, destabilisation, and urgency for action.
