Fry, 2015-02 The chapters in this book posit that humans clearly have the capacity to make war but since war is absent in some cultures it cannot be viewed as a human universal And counter to frequent presumption the actual archaeological record reveals the recent emergence of war It does not typify the ancestral type of human society the nomadic forager band and contrary to widespread assumptions there is little support for the idea that war is ancient or an evolved adaptation Views of human nature as inherently warlike stem not from the facts but from cultural views embedded in Western thinking Amazon com Color in Nature Justin Marshall, Thomas Cronin, Sönke Johnsen, Ron Douglas, Anya Hurlbert, Jane Boddy, Fabio Cortesi, 2024-10-22 A marvelously illustrated guide to color in the natural world Recent years have seen tremendous strides in the fields of vision visual ecology and our own multilayered experience of color in life and the world These advances have been driven by astonishing discoveries in neuroscience and evolutionary biology as well as psychology and design This beautifully illustrated book unlocks nature's colorful purpose revealing how creatures see color as well as shedding light on the important part that it plays in animal behavior from reproduction and communication to aggression and defense Color in Nature also places the human experience and uses of color in the context of all the colors around us both in the natural world and in the world that we humans create for our own pleasure and purpose A wide ranging survey of a vibrant and compelling topic Color in Nature will open your eyes to new ways of perceiving the world Features a wealth of stunning color illustrations Explains what color is and how it happens Covers the physics genetics chemistry physiology and psychology of animal color perception Discusses colors humans don't see or rarely use Sheds light on the evolution of colors for mating hunting fighting deceiving and hiding Provides insights into color blindness bio inspired colors and people's appreciation for art and design Genetic Nature/Culture Prof. Alan H. Goodman, Prof. Deborah Heath, M. Susan Lindee, 2003-11-06 The so called science wars pit science against culture and nowhere is the struggle more contentious or more fraught with paradox than in the burgeoning realm of genetics A constructive response and a welcome intervention this volume brings together biological and cultural anthropologists to conduct an interdisciplinary dialogue that provokes and instructs even as it bridges the science culture divide Individual

essays address issues raised by the science politics and history of race evolution and identity genetically modified organisms and genetic diseases gene work and ethics and the boundary between humans and animals The result is an entree to the complicated nexus of questions prompted by the power and importance of genetics and genetic thinking and the dynamic connections linking culture biology nature and technoscience The volume offers critical perspectives on science and culture with contributions that span disciplinary divisions and arguments grounded in both biological perspectives and cultural analysis An invaluable resource and a provocative introduction to new research and thinking on the uses and study of genetics Genetic Nature Culture is a model of fruitful dialogue presenting the quandaries faced by scholars on both sides of the two cultures debate

The Duplex Nature of Indigeneity Frans J. Schryer, 2025-02-03. The Duplex Nature of Indigeneity is a detailed ethnography centered on Ahuehuetpan, a Mexican town in the Alto Balsas region of the state of Guerrero where an exodus of more than half the population to the United States and other parts of Mexico has altered both livelihoods and social identities. Frans Schryer traces the people including families and descendants who locate their identity in the Alto Balsas, a place some of them may never have seen. Using a variety of sources, perspectives, and methods, Schryer takes a duplexity approach which allows understanding the complexity of social reality and its complementary nature. It identifies fields, clusters, and layers as interconnected components of social life. The innovative methods consist of the combination of ethnographic description and an ethnohistorical census that provides information on every person going back to approximately 1850. That census is further examined with the use of inferential and non-inferential statistical techniques, archival research in locations not normally accessible to scholars, Facebook, phone interviews conducted over several years, and help from Nahuatl speaking people whose perspectives on the findings generate additional information and insights. Unique in this presentation which dips into the lives of generations of people to draw insight on those who lay claim to transnational Indigeneity, Schryer's work contributes to research and theoretical discussion in the field of migration and globalization studies through a close examination of one Indigenous community over the course of many years, utilizing a mix of qualitative and quantitative research methods in anthropology.
