Nature and the English Diaspora Thomas R. Dunlap, 1999-09-28 First published in 1999 this book is a comparative history of the development of ideas about nature particularly of the importance of native nature as a part of the culture in the Anglo settler countries of the United States Canada Australia and New Zealand It examines the development of natural history in the great nineteenth century expansion of settlement It explores settlers adaptations to the end of expansion and scientists shift from natural history to ecology Finally it analyzes the diffusion of ecology through the Anglo world and to the general population as well as the rise of environmentalism Addressing not only scientific knowledge but also popular issues such as hunting common names for plants and animals landscape painting and nature stories this book explores the ways in which English speaking settlers looked at nature in their new lands and at the place they gave it in their societies

The nature park guide for Abel Tasman National Park (New Zealand) ,2025-09-26 **The nature park guide for Kahurangi National Park (New Zealand)** ,2025-09-26 **Nature Guide to the New Zealand Forest** John Dawson, Rob Lucas, 2000 New Zealand's native forests are rich and fascinating ecosystems and the interactions between the various plants and animals are as interesting as the individuals themselves This book is an ecological field guide In one volume it provides identification for a range of common plants trees and shrubs vines and epiphytes ground plants fungi mosses and liverworts and animals birds reptiles insects and mammals It also offers insights into the intriguing and vital interactions between them NATURE GUIDE

TO THE NEW ZEALAND FOREST has a user friendly colour coded layout from the tallest trees to the forest floor Illustrated with stunning photographs many of which are beautiful composite shots of several similar species for easy identification this is a comprehensive and innovative guide to the wonders of the New Zealand forest **Nature** Sir Norman Lockyer,1909

The nature park guide for Paparoa National Park (New Zealand) ,2025-09-26 **The Selborne Magazine and "Nature Notes," the Organ of the Selborne Society** ,1894 **The Story of Nature** Jeremy Mynott,2024-10-29 The story of humanity s evolving relationship with the natural world from pre history to the present day Nature has long been the source of human curiosity and wonderment and the inspiration for some of our deepest creative impulses But we are now witnessing its rapid impoverishment even destruction in much of our world In this beautifully illustrated book Jeremy Mynott traces the story of nature past present and future From the dramatic depictions of animals by the prehistoric cave painters through the romantic discovery of landscape in the eighteenth century to the climate emergency of the present day Mynott looks at the different ways in which humankind has understood the world around it Charting how our ideas about nature emerged and changed over time he reveals how the impulse to control nature has deep historical roots As we reach an environmental crisis point this vital study shows how human imagination and wonder can play a restorative role and reveal what nature ultimately means to us Nature ,1893 Nature and Farming David Norton FLS,Nick Reid,2013-04-10

Conserving and enhancing native biodiversity on farms brings many benefits as well as providing many challenges Nature and Farming explains why it is important to sustain native plants and animals in agricultural landscapes and outlines the key issues in developing and implementing practical approaches to safeguarding native biodiversity in rural areas The book considers the range of ecological and agricultural issues that determine what native biodiversity occurs in farmland and how it can be secured Many inspiring case studies are presented where innovative approaches towards integrating biodiversity and farm management have been successful resulting in win win outcomes for both nature and society In the integration and synthesis of these case studies lies the kernel of a new paradigm for nature conservation on farms Although the book focuses on biodiversity conservation on Australian and New Zealand farms the issues and approaches discussed are applicable to many other developed countries especially in Europe and North America **Invasive and Introduced Plants and Animals**

Ian D. Rotherham,Robert A. Lambert,2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and

fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate

Children, Nature and Cities Claire Freeman, Yolanda van Heezik, 2018-06-14 That children need nature for health and well being is widely accepted but what type of nature Specifically what type of nature is not only necessary but realistically available in the complex and rapidly changing worlds that children currently live in This book examines child nature definitions through two related concepts the need for connecting to nature and the processes by which opportunities for such contact can be enhanced It analyses the available nature from a scientific perspective of habitats species and environments together with the role of planning to identify how children in cities can and do connect with nature This book challenges the notion of a universal child and childhood by recognizing children's diverse life worlds and experiences which guide them into different and complex ways of interacting with the natural world Unfortunately not all children have the freedom to access the nature that is present in the cities where they live This book addresses the challenge of designing biodiverse cities in which nature is readily accessible to children

New Zealand Lizards David G. Chapple, 2016-10-05 This edited volume is a timely and comprehensive summary of the New Zealand lizard fauna Nestled in the south west Pacific New Zealand is a large archipelago that displays the faunal signatures of both its Gondwanan origins and more recent oceanic island influences New Zealand was one of the last countries on Earth to be discovered and likewise the full extent of the faunal diversity present within the archipelago is only just starting to be appreciated This is no better exemplified than in lizards where just 30 species 20 skinks 10 geckos were recognized in the 1950s but now 104 are formally or informally recognized 61 skinks 43 geckos Thus New Zealand contains one of the most diverse lizard faunas of any cool temperate region on Earth This book brings together the world's leading experts in the field to produce an authoritative overview of the history taxonomy biogeography ecology life history physiology and conservation of New Zealand lizards

The Art of Environmental Law Benjamin J Richardson, 2019-12-12 Environmental law has aesthetic dimensions Aesthetic values have shaped the making of environmental law and in turn such law governs many of our nature based sensory experiences Aesthetics is also integral to understanding the very fabric of

environmental law in its institutions procedures and discourses The Art of Environmental Law the first book of its kind brings new insights into the importance of aesthetic issues in a variety of domains of environmental governance around the world from climate change to biodiversity conservation It also argues for aesthetics and relatedly the arts to be taken more seriously in the practice of environmental law so as to improve our emotional and ethical capacities to address the upheavals of the Anthropocene *Nature Notes* ,1892 Birds and Nature Vol. 9 No. 3 [March 1901] Various,2015-01-29 Example in this ebook ABOUT PARROTS Naturalists place the parrot group at the head of bird creation This is done not of course because parrots can talk but because they display on the whole a greater amount of intelligence of cleverness and adaptability to circumstances than other birds including even their cunning rivals the ravens and the jackdaws It may well be asked what are the causes of the exceptionally high intelligence in parrots The answer which I suggest is that an intimate connection exists throughout the animal world between mental development and the power of grasping an object all round so as to know exactly its shape and its tactile properties The possession of an effective prehensile organ a hand or its equivalent seems to be the first great requisite for the evolution of a high order of intellect Man and the monkeys for example have a pair of hands and in their case one can see at a glance how dependent is their intelligence upon these grasping organs All human arts base themselves ultimately upon the human hand and our nearest relatives the anthropoid apes approach humanity to some extent by reason of their ever active and busy little fingers The elephant again has his flexible trunk which as we have all heard over and over again is equally well adapted to pick up a pin or to break the great boughs of tropical forest trees The squirrel also remarkable for his unusual intelligence when judged by a rodent standard uses his little paws as hands by which he can grasp a nut or fruit all round and so gain in his small mind a clear conception of its true shape and properties Throughout the animal kingdom generally indeed this chain of causation makes itself everywhere felt no high intelligence without a highly developed prehensile and grasping organ Perhaps the opossum is the best and most crucial instance that can be found of the intimate connection which exists between touch and intellect The opossum is a marsupial it belongs to the same group of lowly organized antiquated and pouch bearing animals as the kangaroo the wombat and other Australian mammals Everybody knows that the marsupials as a class are preternaturally dull are perhaps the least intelligent of all existing quadrupeds And this is reasonable when one considers the subject for they represent a very early type the first rough sketch of the mammalian idea with brains unsharpened as yet by contact with the world in the fierce competition of the struggle for life as it displays itself on the crowded stage of the great continents They stand in fact to the lions and tigers the elephants and horses the monkeys and squirrels of America and Europe as the native Australian stands to the American or the Englishman They are the last relic of the original secondary quadrupeds stranded for centuries on a Southern island and still keeping up among Australian forests the antique type of life that went out of fashion elsewhere a vast number of years ago Hence they have brains of poor quality a fact amply demonstrated by the kangaroo when one watches his behavior

in the zoological gardens To be continue in this ebook *The world of wonders: a record of things wonderful in nature, science and art. [Publ. in pts. With] Correspondence [publ. in 11 suppl. Wanting the wrappers].* World,1874 *Nature Remade* Luis A. Campos,Michael R. Dietrich,Tiago Saraiva,Christian C. Young,2021-07-16 In this fourth volume in our Convening Science series with the Marine Biological Laboratory contributors including historians biologists and philosophers explore the development of bioengineering The essays show how engineering is both a means to a functional end and a method of learning about the world The book is organized around three themes controlling and reproducing knowing and making and envisioning to chart the increasing sophistication of our engineering of biological systems and to change our sense of the scales at which engineering occurs to include not just genetics but also ecosystem level intervention The volume will attempt to make the case for the centrality of engineering for understanding and imagining modern life **Zoölogical Science, Or, Nature in Living Forms ...** Anna Maria Redfield,1858
