**Physics and Chemistry of Earth Materials** Alexandra Navrotsky,1994-11-25 With an approach that stresses the fundamental solid state behaviour of minerals and with emphasis on both theory and experiment this 1995 text surveys the physics and chemistry of earth materials It starts with a systematic tour of crystal chemistry of both simple and complex structures with completely new structural drawings and discusses how structural and thermodynamic information is obtained experimentally The quantitative concepts of chemical bonding band theory molecular orbit and ionic models are reviewed The book goes on to discuss physical properties and to relate microscopic features to macroscopic thermodynamic behaviour The book then discusses high pressure phase transitions amorphous materials and solid state reactions and concludes with a look at the interface between mineral physics and materials science Highly illustrated throughout this book fills the gap between undergraduate texts and specialised review volumes for students in earth sciences and materials science

*The Excursion and Wordsworth's Iconography* Brandon C. Yen,2018-09-20 This book considers William Wordsworth s use of iconography in his long poem The Excursion Through the iconographical approach the author steers a middle course between The Excursion s two very different interpretive traditions one focusing upon the poem s philosophical abstraction the other upon its touristic realism Fresh readings are also offered of Wordsworth s other major works including The Prelude Yen explores Wordsworth s iconography in The Excursion by tracing allusions and correspondences in an abundance of post 1789 and earlier verbal and pictorial sources as well as in Wordsworth s prose and poetry He analyses how the iconographical images in The Excursion contribute to and impose limitations on the overarching preoccupations of Wordsworth s writings particularly the themes of paradise lost and paradise regained in the post revolutionary context Shedding light on a vital aspect of Wordsworth s poetic method this study reveals the visual etymologies together with the nuances and rhetorical capacities of five categories of apparently collateral images envisioning rooting dwelling flowing and reflecting

*Concepts of Harmony Embodied in the Ancient Chinese Architecture* Ling Li, Jun Li, Kefeng Ji, 2024-10-31 This book explores the core concept of Chinese ancient architecture from a multidisciplinary perspective. It aims to contribute to the development, inheritance, and protection of Chinese ancient architectural culture while also benefiting the sustainable development of modern architecture. This book follows a main line of inquiry exploring the rich and harmonious ideas present in Chinese ancient architecture. It combines the traditional Chinese culture and architectural ideas and examines the original thought that forms the foundation of the traditional Chinese architectural culture of harmony from various aspects. Firstly, the book describes the Taoist theory of the harmony between man and nature as expressed through different architectural elements. Secondly, it discusses the system of harmony among people influenced by Confucianism. Lastly, it explores the significance of Buddhism in Buddhist architecture. Finally, it also examines the difference in the embodiment of harmonious ideas between Chinese and Western architectures. This book studies and analyzes the type and characteristics of Chinese ancient architecture, the architectural objects, and the simple ecological environment views contained within the architectural concept. It not only analyzes the historical development context but also provides physical examples of architectural types and explores the influence of regional environmental factors. The target audience for this book includes scholars in universities and scientific research departments, particularly those studying architectural aesthetics, history, and philosophy; it is also suitable for ordinary readers who have interest in Chinese traditional architectural culture. The text integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology, and solar system astronomy. The book is designed for a course in natural hazards for non-science majors, and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society. *Natural Hazards* uses historical to recent examples of hazards and disasters to explore how and why they happen and what we can do to limit their effects. The text's up-to-date coverage of recent disasters brings a fresh perspective to the material. The Fourth Edition continues our new active learning approach that includes reinforcement of learning objectives.
