The Living World Samantha Walton, 2020-12-10 Harnessing new enthusiasm for Nan Shepherd's writing, *The Living World* asks how literature might help us reimagine humanity's place on earth in the midst of our ecological crisis. The first book to examine Shepherd's writing through an ecocritical lens, it reveals forgotten details about the scientific, political, and philosophical climate of early twentieth-century Scotland and offers new insights into Shepherd's distinctive environmental thought. More than this, this book reveals how Shepherd's ways of relating to complex, interconnected ecologies predate many of the core themes and concerns of the multi-disciplinary environmental humanities and may inform their future development. Broken down into chapters focusing on themes of place, ecology, environmentalism, deep time, vital matter, and selfhood, *The Living World* offers the first integrated study of Shepherd's writing and legacy, making the work of this philosopher, feminist, amateur ecologist, geologist, and innovative modernist accessible and relevant to a new community of readers. *Life's Kaleidoscope: Unveiling the Beauty of Nature's Patterns* Pasquale De Marco, 2025-07-14 Prepare to embark on a captivating journey through the realm of life in all its splendor and complexity. *Life's Kaleidoscope: Unveiling the Beauty of Nature's Patterns* is a comprehensive exploration of the natural world that unravels the mysteries of life, revealing its boundless

Parallel Worlds: Evolution Of Life Across The Cosmos Wallace Arthur,2024-12-27 Humanity is fast approaching the point of being able to answer the age old question Are we alone in the cosmos The answer will almost certainly turn out to be no This is virtually guaranteed by two discoveries made in the last hundred years or so that the Milky Way is just one of countless galaxies and that the number of planets beyond our solar system exoplanets is vast But what is extraterrestrial life actually like What kinds of creatures roam the surfaces of alien planets or swim in their seas Are they typically in the genre of life as we know it or are they characterized by exotic forms and as yet undiscovered metabolism In Parallel Worlds Wallace Arthur argues that we should expect to find creatures that are similar in broad terms to those of Earth This can be anticipated because the environments of habitable planets have many parallel features so Darwinian natural selection should work in parallel ways producing broadly parallel trees of life This book takes the form of a

step by step argument in favour of the hypothesis that there are multiple worlds inhabited by life forms that are broadly parallel to those of our home planet Like all good hypotheses it s testable The testing won t be easy and it isn t imminent but it will happen eventually providing humanity lasts for long enough Rewilding Your Life Yves Earhart,2024-10-11
