Nature Of Perceptual Adaptation:

The Nature of Perceptual Adaptation, 1966 **Nature Of Perceptual Adapton** Irvin Rock, 1966-01-21 **Nature Of Perceptual Adapton** Irvin Rock, 1966 Vision and Motor Control L. Proteau, D. Elliott, 1992-02-20 Since the classic studies of Woodworth 1899 the role of vision in the control of movement has been an important research topic in experimental psychology While many early studies were concerned with the relative importance of vision and kinesthesia and or the time it takes to use visual information recent theoretical and technical developments have stimulated scientists to ask questions about how different sources of visual information contribute to motor control in different contexts In this volume articles are presented that provide a broad coverage of the current research and theory on vision and human motor learning and control Many of the contributors are colleagues that have met over the years at the meetings and conferences concerned with human movement They represent a wide range of affiliation and background including kinesiology physical education neurophysiology cognitive psychology and neuropsychology Thus the topic of vision and motor control is addressed from a number of different perspectives In general each author sets an empirical and theoretical framework for their topic and then discusses current work from their own laboratory and how it fits into the larger context A synthesis chapter at the end of the volume identifies commonalities in the work and suggests directions for future experimentation *Perception and Experience* H. Pick, 2013-11-11 In recent years significant indeed dramatic advances have occurred in the study of perception These have been made possible by and in fact include methodological advances such as the development of signal detection theory and the application of linear systems analysis to auditory and visual perception They are reflected in an interest in the study of ecologically valid perceptual problems e.g. control of locomotion speech perception reading perceptual motor coordination and perception of events At the same time exciting new insights have been gained to some of the classical problems of perception stereoscopic vision color vision attention position constancy to mention a few A broad comparative approach to perception has also been taken This approach which includes the detailed study of human infant perception as well as cross cultural and cross species investigations has given us a very broad perspective of the perceptual process In this context the present volume inaugurates a new series entitled Perception and Perceptual Development A Critical Review Series The editors are particularly gratified by the enthusiastic support for their ideas by Seymour Weingarten of Plenum Press He and the editorial staff of Plenum Press have been of immense help in initiating the series as well as helping with the details of this first volume The Nature and Function of Scientific Theories Robert G. Colodny, 2010-11-23 The six essays in this volume discuss philosophical thought on scientific theory including a call for a realist rather than instrumentalist interpretation of science a critique of one of the core ideas of positivism concerning the relation between observational and theoretical languages using aerodynamics to discuss the representational aspect of scientific theories and their isomorphic qualities the relationship between the reliability of common sense and the authenticity of the world view of science removing

long held ambiguities on the theory of inductive logic and the relationship between the actuality of conceptual revolutions in the history of science and traditional philosophical pictures of scientific theory building

Perceptual Modification Robert B. Welch, 2013-10-22 Perceptual Modification Adapting to Altered Sensory Environments is about the study of human perception using a particular research strategy the systematic alteration of vision or audition It is assumed that by observing how the sensory apparatus copes with this disturbance it will be possible to formulate valuable hypotheses about the structure and development of normal perception and perceptual motor coordination The specific goals of this book are first to organize the vast and confusing literature on adaptation to perceptual rearrangement and second to assess its contribution to the understanding of normal perception and perceptual learning The book begins with discussions of adaptation to small prism induced displacements of the visual field Separate chapters follow on the proposition that adaptation to prismatic displacement and other forms of rearrangement is actually a form of learning adaptation to inverted and reversed vision optical tilt illusory motions of the visual field size depth distortions and distortions of form Subsequent chapters deal with studies of auditory rearrangement examine individual and interspecies differences in adaptability and the study of adaptation to the visual distortions encountered by the underwater observer The book is written for researchers and graduate students in experimental psychology It will be of value and interest whether the reader is a specialist in the area of perceptual modification or indeed a generalist

Perceptual Cognitive Development, 1969 **Adaptive Spatial Alignment** Gordon M. Redding, Benjamin Wallace, 2013-06-17 For most people prism adaptation is an amusing demonstration first experienced perhaps in an introductory psychology course This monograph relates this peculiar phenomenon to the larger context of

cognitive science especially motor control and learning The first part sketches the background concepts necessary to understand the contribution of prism adaptation to the larger issue of adaptive perceptual motor performance including a review of the basic concepts of motor control and learning that enable strategic response in the prism adaptation situation the development of a hypothesis about spatial representation and spatial mapping and an introduction to the basic idea of adaptive spatial alignment and a contrasting view of perceptual and motor learning and a review of evidence for the involvement of nonassociative and associative learning in prism adaptation Directly concerned with data and theory in prism adaptation the second part presents an outline of prism adaptation methodology and a list of several empirical conclusions from previous research that constrained development of theoretical framework a theory of strategic perceptual motor control and learning which enables adaptive performance during prism exposure but does not directly involve adaptive spatial alignment an extension of the theory to include realignment processes which correct for the spatial misalignment among sensorimotor systems produced by prisms and a demonstration of how traditional issues in prism adaptation may be rephrased in terms of the present theoretical framework The last part of this volume reviews the research conducted in developing and testing the present theory of prism adaptation It summarizes the initial investigations employing a naturalistic exposure setting reports some more rigorous tests with an experimentally constrained research paradigm points out the more general theoretical issues raised by the authors analysis of prism adaptation and makes specific suggestions for further research within the prism adaptation paradigm
