[Nature's Frontiers](#) Richard Damania, Stephen Polasky, Mary Ruckelshaus, Jason Russ, Markus Amann, Rebecca Chaplin-Kramer, James Gerber, Peter Hawthorne, Martin Philipp Heger, Saleh Mamun, Giovanni Ruta, Rafael Schmitt, Jeffrey Smith, Adrian Vogl, Fabian Wagner, Esha Zaveri, 2023-04-14 The great expansion of economic activity since the end of World War II has caused an unprecedented rise in living standards but it has also caused rapid changes in earth systems Nearly all types of natural capital the world's stock of resources and services provided by nature are in decline Clean air abundant and clean water fertile soils productive fisheries dense forests and healthy oceans are critical for healthy lives and healthy economies Mounting pressures however suggest that the trend of declining natural capital may cast a long shadow into the future Nature's Frontiers Achieving Sustainability Efficiency and Prosperity with Natural Capital presents a novel approach to address these foundational challenges of sustainability A methodology combining innovative science new data sources and cutting edge biophysical and economic models builds sustainable resource efficiency frontiers to assess how countries can sustainably use their natural capital more efficiently The analysis

provides recommendations on how countries can better use their natural capital to achieve their economic and environmental goals. The report indicates that significant efficiency gaps exist in nearly every country. Closing these gaps can address many of the world's pressing economic and environmental problems: economic productivity, health, food and water security, and climate change. Although the approach outlined in this report will entail demanding policy reforms, the costs of inaction will be far higher.

Natural Resources And Sustainable Development B. K. Panda, Sukanta Sarkar, 2015. Natural resources are materials and components something that can be used that can be found within the environment. It occurs naturally within environments that exist relatively undisturbed by humanity in a natural form. It can be thought of as natural capital assets distinct from physical and human capital in that they are not created by human activity. Natural resource is often characterized by amounts of biodiversity and geodiversity existent in various ecosystems. They are useful materials from the Earth such as coal, oil, natural gas, and trees. People use natural resources as raw materials to manufacture or create a range of modern conveniences. Water and food provide humans with sustenance and energy; for example, and fossil fuels generate heat as well as energy for transportation and industrial production. Natural resources are the raw materials supplied by nature. Everything produced, used, and thrown away originates from natural resources. People cannot create natural resources. Sustainable development is a road map, an action plan for achieving sustainability in any activity that uses resources and where immediate and intergenerational replication is demanded. It is hoped that the present edition of this book will be beneficial to all concerned of the society in general and students, lawyers, advocates, academicians, human rights institutions, researchers, and NGOs working in natural science, economics field in particular.

Cultural Sustainability and the Nature-Culture Interface Inger Birkeland, Rob Burton, Constanza Parra, Katriina Siivonen, 2018-03-14. As contemporary socio-ecological challenges such as climate change and biodiversity preservation have become more important, the three pillars concept has increasingly been used in planning and policy circles as a framework for analysis and action. However, the issue of how culture influences sustainability is still an underexplored theme. Understanding how culture can act as a resource to promote sustainability rather than a barrier is the key to the development of cultural sustainability. This book explores the interfaces between nature and culture through the perspective of cultural sustainability. A cultural perspective on environmental sustainability enables a renewal of sustainability discourse and practices across rural and urban landscapes, natural and cultural systems, stressing heterogeneity and complexity. The book focuses on the nature-culture interface conceptualised as a place where experiences, practices, policies, ideas, and knowledge meet, are negotiated, discussed, and resolved. Rather than looking for lost unities or an imaginary view of harmonious relationships between humans and nature based in the past, it explores cases of interfaces that are context-sensitive and which consciously convey the problems of scale and time. While calling attention to a cultural or culturalised view of the sustainability debate, this book questions the radical nature-culture dualism dominating positive modern thinking as well as its underlying view of nature as pre-given and

Philippe Cullet, University of London, UK. This well-researched book covers a wide spectrum of important issues that are central to investment in natural resources and ultimately economic development of Africa. Francis Botchway and the expert contributors analyse the relationships between good governance and resource management as well as the existing commercial and financial agreements. The environmental implications of resource exploitation and the international dimensions of the industry are also explored in this insightful study. Each comprehensive and concise contribution highlights the importance of transparency and equity in investment and management of natural resources. Natural Resource Investment and Africa's Development is essential material for scholars and students of development, environmental law, international economic law, and dispute resolution, as well as any international investor in natural resources.

The Politics of Nature Andrew Dobson, Paul Lucardie, 2002-11-01 This book presents a uniquely comprehensive and balanced survey of current green political ideas. It analyses the ability of these ideas to provide plausible answers to fundamental problems in political theory concerning justice and democracy, individual rights and freedom, human nature, and gender. The authors, who come from a range of different disciplines, explore the relationship between green ideas and other traditions including liberalism, anarchism, feminism, and Christianity.

Essays on Nature and the Philosophy of Environmental Education Michael Bonnett, Justin Dillon, Alan Reid, 2025-09-26 This volume identifies and debates important elements of what would be involved in an education that is truly adequate for the environmental situation that currently confronts us. The chapters in the book present a wide variety of perspectives and raise questions about much mainstream environmental education, particularly the heavy emphasis given to science in understanding environmental problems and to technology for solving them. Contributions argue that there are other, equally if not more important, aspects to be considered, notably our underlying attitudes towards nature and the quality of our underlying relationship with it. They raise questions about what we mean by nature and how we come to know it most authentically in its many facets. The overweening anthropocentrism and desire for mastery that informs much of current Western engagement with nature is revealed as stymying our ability properly to recognise nature's intrinsic value and moral standing. Consideration is given to the need for a curriculum in which morality, poetry, and myth, art, and the humanities have key roles to play, and where our understandings of the qualities of time and space that frame the curriculum are refreshed. The majority of the chapters in this book were originally published in the journal *Environmental Education Research*.
