Natures Enigma:

Nature's Enigma Virginia Parker Dawson, 1987 Two striking discoveries made 1740 a turning point in the history of 18th century biology Charles Bonnet established that aphids could reproduce without male fertilization Shortly afterwards Abraham Trembley proved that a tiny aquatic animal the fresh water polyp or hydra could regenerate from cuttings like some plants The discovery of the polyp was important because of the disturbing metaphysical issues that it raised In their letters written during the decade of the 1740s to Reaumur the great French Academician both Trembley Bonnet referred to the polyp as an enigma Not only did it seem to present a new mode of animal reproduction previously unsuspected but it called into question the prevailing mechanistic view of animal biology brought into focus the problem of animal soul Drawing on some of the most illuminating letters from the private archives of the Trembley family this study focuses on the discovery of the polyp using the correspondence of Bonnet Trembley to understand their common Genevan background their possible differences in approach from that of Reaumur

Catching Nature in the Act Mary Terrall,2014-04-16 Natural history in the eighteenth century was many things to many people diversion obsession medically or economically useful knowledge

spectacle evidence for God's providence and wisdom or even the foundation of all natural knowledge. Because natural history was pursued by such a variety of people around the globe with practitioners sharing neither methods nor training, it has been characterized as a science of straightforward description devoted to amassing observations as the raw material for classification and thus fundamentally distinct from experimental physical science. In *Catching Nature in the Act*, Mary Terrall revises this picture, revealing how eighteenth-century natural historians incorporated various experimental techniques and strategies into their practice. At the center of Terrall's study is René Antoine Ferchault de Reaumur (1683–1757), the definitive authority on natural history in the middle decades of the eighteenth century and his many correspondents, assistants, and collaborators. Through a close examination of Reaumur's publications, papers, and letters, Terrall reconstructs the working relationships among these naturalists and shows how observing, collecting, and experimenting fit into their daily lives. Essential reading for historians of science and early modern Europe, *Catching Nature in the Act* defines and excavates a dynamic field of francophone natural history that has been inadequately mined and understood to date.
