

NATURE'S NEWBORN

Nature's Newborn. A series of animal stories with a difference. In each episode, a different baby animal interacts with its parents, friends, and even its enemies to bring you a truly exciting look into their daily adventures, aspirations, and dreams in the wild. Each baby animal has its own character, and like children, they have their own likes and dislikes, sometimes even contradictory to their nature.

Human Nature Stephen Gislason,2017-07-05 Preface Being a human is challenging Human life is a journey thorough time and space with many obstacles injury disease constant uncertainty and relentlessly difficult interactions with other humans Each human is the reincarnation of a long lineage of ancestors Species memory perceptual skills needs drives feelings desires and behaviors are built in and begin operating in utero Humans evolved from primate ancestors and retained features of mind and behavior that have been present in animals for hundreds of millions of years Urges desires designs feelings cry out from within and often surprise us as if we were the hosts to wild animals and spirits within that refuse to be identified or tamed Human behavior can be understood in relation to the whole spectrum of primate behaviors and social organizations Humans appear to have an eclectic combination of primate tendencies with elaboration of features such as tool making symbolic reasoning and spoken language Linda Stone suggested that Primates are a natural grouping of mammals that includes prosimians tree dwelling animals such as lemurs and tarsiers monkeys apes and humans Some of the physical characteristics that distinguish primates from other mammals are binocular vision and the grasping hand with mobile digits and flat nails Evolutionary trends characteristic of the Primate Order are most pronounced in humans and include prolongation of gestation of the fetus prolongation of the period of infant care and expansion and elaboration of the brain An important feature in the social life of many nonhuman primates is dominance and the formation of dominance hierarchies a dominant animal wins aggressive encounters with others and usually has greater access to resources such as food water or sexual partners Rather than viewing society and culture as real things an observer can recognize that humans live in groups that repeat and modify innate behaviors to produce prolific variations on a few underlying themes that are common to all societies A smart observer will consider the grouping characteristics of humans and discern basic patterns and problems underlying the apparent complexity of modern civilization The organization of society begins with small local clusters that link family groups into clans that are more or less cooperative units Clans associate forming bands that tend to affiliate with other bands forming tribes looser affiliations that occupy larger geographic areas The band tribal structure emerges from ancient animal groupings Patterns of organization rules and institutions that regulate human behavior are in flux and will continue to be unstable As human populations expand and interactions become increasingly complex innate abilities are stretched and distorted The ability of individuals to relate to other humans remains limited and limits the effective management of enlarging groups Managers and leaders do not become smarter as the organizations they lead become larger It is axiomatic that organizations that exceed a threshold number become dysfunctional It is matter of empirical study to recognize group size thresholds and too little is known about the

cognitive limitations of leaders *On Human Nature* Armin Grunwald, Matthias Gutmann, Eva M. Neumann-Held, 2013-04-17

Modern molecular technology in the so called life sciences biology as well as medicine allows today to approach and manipulate living beings in ways and to an extent which not too long ago seemed Utopian. The empirical progress promises further and even more radical developments in the future and it is at least often claimed that this kind of research will have tremendous effects on and for all of humanity for example in the areas of food production transplantation medicine including stem cell research and xenotransplantation therapeutic genetic manipulation and cell line cloning of cell lines or tissues and of biodiversity conservation strategies. At least in Western industrialized countries the development of modern sciences led to a steady increase of human health well being and quality of life. However with the move to make the human body itself an object of scientific research interests the respective scientific descriptions resulted in changes in the image that human beings have of themselves. Scientific progress has led to a startling loss of traditional human self understanding. This development is in contrast to an understanding according to which the question what it means to be human is treated in the realm of philosophy. And indeed a closer look reveals that without denying the value of scientific progress science cannot replace the philosophical approach to anthropological questions.

Celebrating Nature in Uganda: A Photographic Journey Sunil Singh, Vani Singh, 2025-04-21 Celebrating Nature in Uganda A Photographic

Journey captures Sunil and Vani's exploration of Uganda's rich biodiversity and breathtaking landscapes. Traveling across the country's national parks and reserves, they immerse themselves in Uganda's diverse wildlife, from rare bird species to iconic big game. Often overshadowed by its neighbors Kenya and Tanzania, Uganda offers a more intimate safari experience, free from massive crowds and rushing vehicles. With its varied habitats and nearly 1,000 bird species, it remains a gem for wildlife and birding enthusiasts. This book takes readers on a journey through Uganda's wilderness, from close encounters with hippos in Lake Mburo and vast herds of buffalo in remote Kidepo Valley to intimate moments with gorilla families in Bwindi and chimpanzees in Kibale. Walking among giraffes in Lake Mburo and tracking rhinos in Ziwa, Sunil and Vani experience nature in its purest form. Sunil's evocative images bring these moments to life, reflecting patience, perseverance, and a deep passion for storytelling. Through stunning imagery and compelling narratives, this book inspires nature lovers and travelers alike to appreciate and protect the extraordinary planet we are so lucky to inherit.

Stoic Virtues

Christoph Jedan, 2011-11-03. Like its ancient rivals, Stoic ethics was a form of virtue ethics, yet while the concept of virtue was clearly central to Stoic ethics, the concept of Stoic virtue has not yet been fully explored. Instead, the existing literature tends to impose on the Stoic material philosophically quite alien, non-Aristotelian interpretations of virtue. According to Christoph Jedan, however, a thorough examination of the Stoic concept of virtue leads to a reassessment of our understanding of Stoic ethics. This book emphasises, in particular, the theological underpinning of Stoic ethics, which Jedan contends has been underestimated in current accounts of Stoic ethics. Jedan argues that the theological motifs in Stoic ethics are, in fact, pivotal to a complete understanding of Stoic ethics. The book focuses on Chrysippus, the most important of the early Stoic thinkers, suggesting that his contribution, and in particular its religious aspect, remained a key point of reference for later Stoics. This fascinating book makes a crucial contribution to the field of ancient ethics.

The Nature and Rationale of Zen/Chan

and Enlightenment Ming Dong Gu, 2023-07-14. This book initiates a paradigm shift away from Zen/Chan as quintessentially Buddhist and examines what makes Chan thought and practice unique and original through an interdisciplinary investigation of the nature and rationale of Chan and its enlightenment. Exploring how enlightenment is achieved through Chan practice and how this differs from other forms of Buddhism, the book offers an entirely new view of Chan that embraces historical scholarship, philosophical inquiry, textual analysis, psychological studies, Chan practice, and neuroscientific research, and locates the core of Chan in its founder Huineng's theory of no-thinking, which creatively integrates the Taoist ideas of zuowang, forgetting in seated meditation, and xinzhai, fast of heart/mind, with his personal experiences of enlightenment. It concludes that Chan is the crystallization of an innovative synthesis of Buddhism, Daoism, and Confucianism, as well as other resources of somatic and spiritual cultivation, and that enlightenment is a momentary return to the mental state of a baby before birth. This book will appeal to students and scholars of religion, philosophy, and neuroscience. It will also offer new insights to thinkers, writers, artists, therapists, and neuroscientists, as well as those practicing Zen, Mindfulness, and

psychotherapy *Galen: Works on Human Nature: Volume 1, Mixtures (De Temperamentis)*, 2019-01-10 Mixtures is of central importance for Galen's views on the human body. It presents his influential typology of the human organism according to nine mixtures or temperaments of hot cold dry and wet. It also develops Galen's ideal of the well tempered person whose perfect balance ensures excellent performance both physically and psychologically. Mixtures teaches the aspiring doctor how to assess the patient's mixture by training one's sense of touch and by a sophisticated use of diagnostic indicators. It presents a therapeutic regime based on the interaction between foods drinks drugs and the body's mixture. Mixtures is a work of natural philosophy as well as medicine. It acknowledges Aristotle's profound influence whilst engaging with Hippocratic ideas on health and nutrition and with Stoic Pneumatist and Peripatetic physics. It appears here in a new translation with generous annotation introduction and glossaries elucidating the argument and setting the work in its intellectual context **The**

Punctuated by humor unique case studies that link pathology to real world clinical applications and absorbing tales from the history of medicine this engaging book focuses on the patient as it guides you through the causes and consequences of common diseases Catching Nature in the Act Mary Terrall, 2014-04-16 Natural history in the

eighteenth century was many things to many people diversion obsession medically or economically useful knowledge spectacle evidence for God's providence and wisdom or even the foundation of all natural knowledge. Because natural history was pursued by such a variety of people around the globe with practitioners sharing neither methods nor training it has been characterized as a science of straightforward description devoted to amassing observations as the raw material for classification and thus fundamentally distinct from experimental physical science. In *Catching Nature in the Act* Mary Terrall revises this picture revealing how eighteenth century natural historians incorporated various experimental techniques and strategies into their practice. At the center of Terrall's study is Ren Antoine Ferchault de R aumur 1683 1757 the definitive authority on natural history in the middle decades of the eighteenth century and his many correspondents assistants and collaborators. Through a close examination of R aumur's publications papers and letters Terrall reconstructs the working relationships among these naturalists and shows how observing collecting and experimenting fit into their daily lives.

Essential reading for historians of science and early modern Europe *Catching Nature in the Act* defines and excavates a dynamic field of francophone natural history that has been inadequately mined and understood to date *Nature's Embrace* Satsuki Kawano, 2010-03-31 Based on extensive fieldwork *Nature's Embrace* reveals the emerging pluralization of death rites in postindustrial Japan. Low birth rates and high numbers of people remaining permanently single have led to a shortage of ceremonial caregivers most commonly married sons and their wives to ensure the transformation of the dead into ancestors.

resting in peace Consequently older adults are increasingly uncertain about who will perform memorial rites for them and maintain their graves In this study anthropologist Satsuki Kawano examines Japan s changing death rites from the perspective of those who elect to have their cremated remains scattered and celebrate their return to nature For those without children ash scattering is an effective strategy as it demands neither a grave nor a caretaker However the adoption of ash scattering is not limited to the childless By forgoing graves and lightening the burden on younger generations to care for them this new mortuary practice has given its proponents an increased sense of control over their posthumous existence By choosing ash scattering older adults contest their dependent status in Japanese society which increasingly views the aged as passive care recipients As such this study explores not only new developments in mortuary practices but also voices for increased self sufficiency in late adulthood and the elderly s reshaping of ties with younger generations Nature s Embrace offers insightful discussion on the rise of new death rites and ideologies older adults views of their death rites and Japan s changing society through the eyes of aging urbanites This book will engage a wide range of readers interested in death and culture mortuary ritual and changes in age relations in postindustrial societies Edward Burne-Jones on Nature Liana De Girolami Cheney,2021-05-21 This volume studies some of Edward Burne Jones s paintings focusing specifically on his approach to nature both through his observations about the real physical world and through his symbolic interpretations of earthly and celestial realms Burne Jones s appreciation for natural formations grew from his interests in astronomy and geography and was expanded by his aesthetic sensibility for physical and metaphysical beauty His drawings and watercolors carefully recorded the physical world he saw around him These studies provided the background for a collection of paintings about landscapes with flora and fauna and ignited an artistic furor that inspired the imagery he used in his allegorical fantasy and dream cycles about forests winding paths and sweet briar roses This study focuses on two main ideas Burne Jones s concept of ideal and artificial or magical nature expressed and represented in his drawings and paintings and the way in which he fused his scientific knowledge about nature with some of the symbolism in his paintings **Nature's Plow** Centro internacional de agricultura tropical,2001 **Return to Nature** Jon Burras,2011-02-04 *Philosophies of Nature: The Human Dimension* Robert S.
