Faltz, 1998 For the first time students and scholars interested in the Navajo language have a book that presents the verb system in a step by step and thorough fashion By providing easy to follow descriptions with abundant examples this book unravels the complexity of Navajo and reveals its expressiveness **The Oxford Handbook of Derivational Morphology** Rochelle Lieber, Pavol Štekauer, 2014 The Oxford Handbook of Derivational Morphology is intended as a companion volume to the Oxford Handbook of Compounding OUP 2009 aiming to provide a comprehensive and thorough overview of the study of derivational morphology Written by distinguished scholars its 41 chapters are devoted to theoretical and definitional matters formal and semantic issues interdisciplinary connections and detailed descriptions of derivational processes in a wide range of language families It presents the reader with the current state of the art in the study of derivational morphology The handbook begins with an overview and a consideration of definitional matters distinguishing derivation from inflection on the one hand and compounding on the other From a formal perspective the handbook treats affixation prefixation suffixation infixation circumfixation etc conversion reduplication root and pattern and other templatic processes as well as prosodic and subtractive means of forming new words From a semantic perspective it looks at the processes that form various types of adjectives adverbs nouns and verbs as well as evaluatives and the rarer processes that form function words Chapters are devoted to issues of theory methodology the historical development of derivation and to child language acquisition sociolinguistic experimental and psycholinguistic approaches The second half of the book surveys derivation in fifteen language families that are widely dispersed in terms of both geographical location and typological characteristics It ends with a consideration of both areal tendencies in derivation and the issue of universals

Native American Language Ideologies Paul V. Kroskrity, Margaret C. Field, 2009-04-15 Beliefs and feelings about language vary dramatically within and across Native American cultural groups and are an acknowledged part of the processes of language shift and language death This volume samples the language ideologies of a wide range of Native American communities from the Canadian Yukon to Guatemala to show their role in sociocultural transformation These studies take up such active issues as insiderness in Cherokee language ideologies contradictions of space time for the Northern Arapaho language socialization and Paiute identity and orthography choices and language renewal among the Kiowa The authors including members of indigenous speech communities who participate in language renewal efforts discuss

not only Native Americans conscious language ideologies but also the often revealing relationship between these beliefs and other more implicit realizations of language use as embedded in community practice The chapters discuss the impact of contemporary language issues related to grammar language use the relation between language and social identity and emergent language ideologies themselves in Native American speech communities And although they portray obvious variation in attitudes toward language across communities they also reveal commonalities notably the emergent ideological process of iconization between a language and various national ethnic and tribal identities As fewer Native Americans continue to speak their own language this timely volume provides valuable grounded studies of language ideologies in action those indigenous to Native communities as well as those imposed by outside institutions or language researchers It considers the emergent interaction of indigenous and imported ideologies and the resulting effect on language beliefs practices and struggles in today s Indian Country as it demonstrates the practical implications of recognizing a multiplicity of indigenous language ideologies and their impact on heritage language maintenance and renewal

Telicity and Durativity Andrea Luise Wilhelm, 2007-01-22 This book studies the linguistic representation of events by examining the relevance of two salient event characteristics telicity and durativity to the grammatical system of natural language The study of events and of event characteristics is an important testing ground for theories on the boundary between extralinguistic

and linguistic knowledge and on the relation between semantics and syntax Telicity and durativity are notions which have become increasingly influential in both the semantic and the syntactic i.e. grammaticalized representation of events The book furthers the understanding of events through the comparison of two genetically and typologically distinct languages German and D ne Sulin Chipewyan Athapaskan an indigenous language of Northwestern Canada It contains the first in depth documentation of the aspectual system of D ne Sulin and a careful analysis of the aspectual behaviour of German particle verbs A stringent methodology considers semantic pragmatic and grammatical factors in both languages The data reveal that telicity and durativity belong to profoundly different semantic and grammatical domains and that neither notion is grammaticalized universally While both notions are represented semantically in German as well as in D ne Sulin telicity is grammaticalized only in the former and durativity is grammaticalized only in the latter

Landscape in Language David M. Mark, Andrew G. Turk, Niclas Burenhult, David Stea, 2011-06-09 Landscape is fundamental to human experience Yet until recently the study of landscape has been fragmented among the disciplines This volume focuses on how landscape is represented in language and thought and what this reveals about the relationships of people to place and to land Scientists of various disciplines such as anthropologists geographers information scientists linguists and philosophers address several questions including Are there cross cultural and cross linguistic variations in the delimitation classification and naming of geographic features Can alternative world views and conceptualizations of landscape be used to produce culturally appropriate Geographic Information Systems GIS Topics included ontology of

Mid-Holocene Language Connections between Asia and North America Edward Vajda, Michael

Fortescue, 2022-01-31 This volume presents the up to date results of investigations into the Asian origins of the only two language families of North America that are widely acknowledged as having likely genetic links in northern Asia It brings together all that has been proposed to date under the respective rubrics of the Uralo Siberian Eskimo Yukaghir Uralic hypothesis and the Dene Yeniseian hypothesis The evolution of the two parallel research strategies for fleshing out these linguistic links between North America and Asia are compared and contrasted Although focusing on stringently controlled linguistic reconstructions the volume draws upon archaeological and human genetic data where relevant

A Functional Discourse Grammar Theory of Grammaticalization Riccardo Giomi, 2023-02-13 In this volume long standing assumptions about the formal changes involved in grammaticalization are evaluated in the light of the striking diversity of human languages To this end the traditional notions of morphological coalescence syntactic fixation and phonological erosion are reassessed with regard to their relationship with the diachronic changes affecting the function of the construction and with larger scale typological changes that affect the language as a whole especially shifts in morphological type and word order patterns The author reaches the conclusion that suprasegmental phonological erosion and syntactic fixation redefined in a template based framework are direct consequences of functional change and are therefore significant indicators of grammaticalization whereas coalescence and segmental erosion are independently motivated by psycholinguistic rather than strictly grammatical factors

Semantics - Typology, Diachrony and Processing Klaus Heusinger, Claudia Maienborn, Paul Portner, 2019-02-19 Now available in paperback for the first time since its original publication the material in this book provides a broad accessible guide to semantic typology crosslinguistic semantics and diachronic semantics Coming from a world leading team of authors the book also deals with the concept of meaning in psycholinguistics and neurolinguistics and the understanding of semantics in computer science It is packed with highly cited expert guidance on the key topics in the field making it a bookshelf essential for linguists cognitive scientists philosophers and computer scientists working on natural language
