*The Power of Promise* M V Ramana, 2012-12-15 Nuclear power has been held out as possibly the most important source of energy for India And the dream of a nuclear powered India has been supported by huge financial budgets and high level political commitment for over six decades Nuclear power has also been presented as safe environmentally benign and cheap Physicist and writer M V Ramana offers a detailed narrative of the evolution of India's nuclear energy programme examining different aspects of it and the claims of success made on its behalf In *The Power of Promise* he makes a historically nuanced and compelling argument as to why the nuclear energy programme

has failed in the past and why its future is dubious Ramana shows that nuclear power has been more expensive than conventional forms of electricity generation that the ever present risk of catastrophic accidents is heightened by observed organizational inadequacies at nuclear facilities and that existing nuclear fuel cycle facilities have been correlated with impacts on public health and the environment He offers detailed information and analysis that should serve to deepen the debate on whether India should indeed embark on a massive nuclear programme Nuclear Decommissioning Michele Laraia, 2012-02-21 Once a nuclear installation has reached the end of its safe and economical operational lifetime the need for its decommissioning arises Different strategies can be employed for nuclear decommissioning based on the evaluation of particular hazards and their attendant risks as well as on the analysis of costs of clean up and waste management This allows for decommissioning either soon after permanent shutdown or perhaps a long time later the latter course allowing for radioactivity levels to drop in any activated or contaminated components It is crucial for clear processes and best practices to be applied in decommissioning such installations and sites particular where any significant health and environmental risks exist This book critically reviews the nuclear decommissioning processes and technologies applicable to nuclear power plants and other civilian nuclear facilities Part one focuses on the fundamental planning issues in starting a nuclear decommissioning process from principles and safety regulations to financing and project management Part two covers the execution phase of nuclear decommissioning projects detailing processes and technologies such as dismantling decontamination and radioactive waste management as well as environmental remediation site clearance and reuse Finally part three details international experience in the decommissioning of nuclear applications including the main nuclear reactor types and nuclear fuel cycle facilities as well as small nuclear facilities and legacy nuclear waste sites Critically reviews nuclear decommissioning processes and technologies applicable to nuclear power plants and other civilian nuclear facilities Discusses the fundamental planning issues in starting a nuclear decommissioning process Considers the execution phase of nuclear decommissioning projects including dismantling decontamination and radioactive waste management as well as environmental remediation site clearance and reuse *Proceedings of the ...
