

# Visual Capabilities: 6. Perception

- When viewing visual displays
  - Displayed features and information may not be enough to make appropriate decisions
  - Meaning of displayed information must also be understood
- Perception: interpreting sensed information
- The interpretation process
  - sometimes straightforward
  - most displays: depends on previous learning (experience or training)
- Visual displays design must meet 2 objectives
  - display must be seen clearly
  - design must help viewer to correctly perceive/understand meaning of display

## **Perception Of Displayed Information:**

*Perception of Displayed Information* Lucien Biberman, 2013-03-13 As this book took form its contents furnished the material for a graduate course at the University of Rhode Island Toward the end of that course the class reviewed the literature on display characteristics and design The universal criticism voiced in those reviews was that there was lots of hardware information but no criteria upon which one could base a sound design Though one could learn all about the size and brightness of various displays one could not form any judgment about how effectively the display transferred information to an observer As I reviewed our nearly completed text an announcement crossed my desk stating that one of the professional societies in a seminar was to consider if one should not attempt to formulate a theory concerning information transfer from displays to an observer That was the first title chosen for our book before our publisher told us that that was a paragraph not a title The group of contributors to this book have labored long in the conviction that there was a real need to develop and present a consolidated theory based upon the work of a number of pioneers including Barnes and Czerny de Vries Rose Coltman and Anderson Schade Johnson van Meeteren and others who established the various parts of a substantial theoretical and experimental back ground that seemed ripe for consolidation

Stanton,2011-06-22 Every day we interact with thousands of consumer products We not only expect them to perform their functions safely reliably and efficiently but also to do it so seamlessly that we don't even think about it However with the many factors involved in consumer product design from the application of human factors and ergonomics principles to reducing risks of malfunction and the total life cycle cost well the process just seems to get more complex Edited by well known and well respected experts the two volumes of Handbook of Human Factors and Ergonomics in Consumer Product Design simplify this process The first volume Human Factors and Ergonomics in Consumer Product Design Methods and Techniques outlines the how to incorporate Human Factors and Ergonomics HF E principles and knowledge into the design of consumer products in a variety of applications It discusses the user centered design process starting with how mental workload affects every day interactions with consumer products and what lessons may be applied to product design The book then highlights the ever increasing role of information technology including digital imaging video and other media and virtual reality applications in consumer product design It also explores user centered aspect of consumer product development with discussions of user centered vs task based approach articulation and assessment of user requirements and needs interaction with design models and eco design With contributions from a team of researchers from 21 countries the book covers the current state of the art methods and techniques of product ergonomics It provides an increased knowledge of how to apply the HF E principles that ultimately leads to better product design

**Information Visualization** Colin Ware,2012-05-21 Most designers know that yellow text presented against a blue background reads clearly and easily but how many can explain why and what really are the best ways to help others and ourselves clearly see key patterns in a bunch of data When we use software access a website or view business or scientific graphics our understanding is greatly enhanced or impeded by the way the information is presented This book explores the art and science of why we see objects the way we do Based on the science of perception and vision the author presents the key principles at work for a wide range of applications resulting in visualization of improved clarity utility and persuasiveness The book offers practical guidelines that can be applied by anyone interaction designers graphic

designers of all kinds including web designers data miners and financial analysts Complete update of the recognized source in industry research and academic for applicable guidance on information visualizing Includes the latest research and state of the art information on multimedia presentation More than 160 explicit design guidelines based on vision science A new final chapter that explains the process of visual thinking and how visualizations help us to think about problems Packed with over 400 informative full color illustrations which are key to understanding of the subject Flat-Panel Displays and CRTs Lawrence E. Tannas, 2012-12-06 Flat Panel Displays and CRTs a review of electronic information display devices is the first systematic and comprehensive coverage of the subject It is intended to distill our wealth of knowledge of flat panel displays and CRTs from their beginnings to the present state of the art Historical perspective theory of operation and specific applications are all thoroughly covered The field of display engineering is a multidisciplinary technical pursuit with the result that its individual disciplines suffer from a lack of communications and limited perspective Many previously developed standards for and general understanding of one technology are often inappropriate for another Care has been taken here to document the old incorporate the new and emphasize commonalities Criteria for performance have been standardized to enable an expert in one display technology such as liquid crystals to compare his device performance with that offered by another technology such as electroluminescence This book has been written with a second purpose in mind to wit to be the vehicle by means of which a new scientist or engineer can be introduced into the display society It is organized to be tutorial for use in instructional situations The first chapters begin with first principles and definitions the middle chapters set out requirements and criteria and the last chapters give a complete description of each major technology **Advances in Human Aspects of Transportation: Part II** Neville Stanton, Steven Landry, Giuseppe Di Bucchianico, Andrea Vallicelli, 2021-07-19 Human Factors and Ergonomics have made a considerable contribution to the research design development operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure aviation and maritime transportation This book presents recent advances in the Human Factors aspects of Transportation These advances include accident analysis automation of vehicles comfort distraction of drivers understanding of distraction and how to avoid it environmental concerns in vehicle systems design intelligent transport systems methodological developments new systems and technology observational and case studies safety situation awareness skill development and training warnings and workload This book brings together the most recent human factors work in the transportation domain including empirical research human performance and other types of modeling analysis and development The issues facing engineers scientists and other practitioners of human factors in transportation research are becoming more challenging and more critical The common theme across these sections is that they deal with the intersection of the human and the system Moreover many of the chapter topics cross section boundaries for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool This is in keeping with the systemic nature

of the problems facing human factors experts in rail and road aviation and maritime research it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment but as embedded issues that can only be understood as a part of an overall system

We show that information is not generally available on the number of people who might benefit from electronic travel aids. Although we have made some guesses about the prevalence of visual impairment and blindness in the United States, we believe them to be underestimates of the true rates. Better information is needed about this population and should be collected with certain variables in mind: age, onset, degree of impairment and certain social factors such as income level. Information is also not available on the use of electronic travel aids. More extensive follow up studies are needed to determine the usefulness and success of particular devices.
