Perception of the Drought Hazard on the Great Plains Thomas Frederick Saarinen, 1969 *Perception of the Drought Hazard on the Great Plains and Its Sociological Impacts* Donna Louise Woudenberg, 2006 Preception of the Drought Hazard on the Great Plains Thomas Frederick Saarinen, 1969 *Drought, Risk Management, and Policy* Linda Courtenay Botterill, Geoff Cockfield, 2013-01-28 Australia and the United States face very similar challenges in dealing with drought Both countries cover a range of biophysical conditions both are federations that provide considerable responsibility to state governments for water and land management and both face the challenges in balancing rural industry and urban development especially in relation to the allocation of water Yet there are critical differences in their approaches to drought science and policy Drought Risk Management and Policy Decision Making under Uncertainty explores the complex relationship between scientific research and decision making with respect to drought in Australia and the United States Risk Management not Crisis Management Drawing on the work of respected academic researchers and policy practitioners the book discusses the issues associated with decision making under uncertainty and the perspectives needs and expectations of scientists policy makers and resource users Starting from the position that drought is a risk to be managed it considers the implications of the predicted impacts of future climate change The book also examines the policy responses to these challenges and the role of scientific input into the policy process Contributors look at drought risk management in action and how end users in the community incorporate drought science into their decision making The book concludes with lessons learned about science policy and managing uncertainty Get Insight into the Relationship between Science and Policy and How to Turn That into More Effective Decision Making Throughout the contributors identify possible reasons for differences in the use and application of drought sciences and approach to policy between the two countries offering valuable insight into the relationship between scientific advice and the policy process They also highlight the challenges faced at the science policy interface Crossing international borders and disciplinary boundaries this timely collection tackles drought policy development as part of the broader discussion about climate change Although the focus is on Australia and the United States many of the lessons learned are relevant for any country dealing with drought *Perception of the Drought Hazard by the Dry Land Farmer of South Canterbury* Wayne Allan Parkhill, 1970 Perception of the Drought Hazard by the Dry Land Farmer of South Canterbury Wayne A. Parkhill, 1980 **The Perception of Risk** Paul Slovic, 2016-10-06 The concept of risk is an outgrowth of our society's great concern about coping with the dangers of modern life The Perception of Risk brings together the work of Paul Slovic one of the world's leading analysts of risk risk perception and risk management to examine the gap between expert views of risk and public perceptions Ordered chronologically it allows the reader to see the evolution of our understanding of such perceptions from early studies identifying public misconceptions of risk to recent work that recognizes the importance and legitimacy of equity trust power and other value laden issues underlying public concern

Hydro-Meteorological Hazards, Risks, and Disasters Paolo Paron, 2023-08-17 Hydro Meteorological Hazards Risks and Disasters 2e provides an integrated look at the major disasters that have had and continue to have major implications for many of the world's people such as floods and droughts. This new edition takes a geoscientific approach to the topic while also covering current thinking about some scientific issues that are socially relevant and can directly affect human lives and assets. This new edition showcases both academic and applied research conducted in developed and developing countries, allowing readers to see the most updated flood and drought modeling research and their applications in the real world, including for humanitarian emergency purposes. Hydro Meteorological Hazards Risks and Disasters 2e also contains new insights about how climate change affects hazardous processes. For the first time, information on the many diverse topics relevant to professionals is aggregated into one volume. It is a valuable reference to researchers, graduates, scientists, physical geographers, urban planners, landscape architects, and other people who work on the built environments of the world. Cutting edge discussion of natural hazard topics that affect the lives and livelihoods of millions of people worldwide. Includes numerous full color tables, GIS maps, diagrams, illustrations, and photographs of hazardous processes in action. Provides case studies of prominent hydro meteorological hazards and disasters. *Environmental Policy, Assessment and Communication* David Canter, Martin Krampen, David Stea, 2024-11-07 Originally published in 1988, reissued now with a new series introduction. *Environmental Policy, Assessment and Communication* was the second in a trilogy of books to open the series. *Ethnoscapes: Current Challenges in the Environmental Social Sciences*. These three titles brought together specially commissioned contributions that cover much of the range of topics that the series as a whole would cover. Although the following volumes would not have the same format, the opening trilogy gave an overview of what was to come while also providing a broad base for the future authors to build upon. This volume has a practical orientation. Its contributions deal directly with research on those environmental matters on which government agencies and other organisations formulate policies or develop design strategies. This therefore covers the assessment and evaluation of designs and design proposals as well as background research to policy issues. *Hazard-Wise* Chris Dolan, 1996-02 Provides the teachers with a ready-to-use classroom resource which covers many aspects of major national hazards and disasters. Through a series of exercises, students are stimulated to investigate the causes and effects of hazards and the way in which people can respond effectively to them. Well-known Australian case studies are used to illustrate the impact of natural disasters. Each section also contains activities designed to arouse greater interest in the topic, such as crossword puzzles, research activities, and role play exercises. Planning For Drought Donald Wilhite, William Easterling, Deborah A. Wood, Eugene Rasmusson, 2019-06-04 Droughts and their management are a serious challenge to water resource professionals. While droughts predominate in arid regions, their frequency and severity in more temperate regions with more abundant rainfall have been on the rise. *Drought Management and Planning for Water Resources* provides an essential collection of planning and management t

Perception of Environment Thomas Frederick Saarinen, 1969 Paper examines studies of environmental perception of personal space room geography larger architectural space roads and pathways neighbourhoods cities larger conceptual regions countries and the world environments are conceptually distinguished as geographical operational perceptual and behavioural and significant factors at various levels all discussed

National Science Board, 1973 *Natural and Human-Induced Hazards and Disasters in Africa* Simelane, Thokozani, 2019-02-25 Natural and human induced environmental hazards are becoming increasingly prominent The frequency of recorded natural disasters rose markedly during the last century from about 100 per in the years up to 1940 to nearly 2800 during the 1990s Africa is the only continent whose share of reported disasters has increased over the past decade Several factors contribute to Africa's high vulnerability to disasters These include the high rate of population growth food insecurity high levels of poverty inappropriate use of natural resources and failures of policy and institutional frameworks Despite the huge negative impact of natural and human induced hazards on Africa's development little is done to prevent them Disaster prevention contributes to lasting improvement in safety and sustainable livelihoods and is essential as part of integrated disaster management strategies The provision of effective scientific input to policy formulation on various issues related to hazards and disasters is an ambitious undertaking It requires the collaborative effort of the African scientific community to develop comprehensive long term strategies and human capacity building initiatives that will enable science to benefit society This will further require a Building strong research and training institutions in Africa at national and regional levels b Facilitating the exchange of scientific information and sharing of ideas across borders c Strengthening the link between scientific research and policy making d Promoting outreach activities to build resilience to disaster risk and e Tapping the knowledge base of rural and urban communities In this volume the ICSU ROA has brought together selected African scientific researchers to share their views on policy direction for facing challenges linked to natural and human induced hazards The book is intended for policy advisers environmental scientists government officials and members of the general public with a special interest in environmental issues

Beyond Drought Linda Courtenay Botterill, Melanie Fisher, 2003-10-28 The unpredictability of Australia's climate poses real challenges for practices that were developed based on the relative predictability of a European climate More recently policy has been moving towards accepting drought as a reality rejecting the notion that it is a natural disaster in favour of an approach based on risk management However the level of public debate during a drought event suggests that this policy approach has not been widely understood or accepted Media reporting of drought rapidly adopts disaster related language and the organisation of relief appeals reinforces the impression that drought is an aberration rather than a normal part of Australia's climate patterns Beyond Drought provides a multi disciplinary discussion aimed at increasing the level of understanding of drought's many facets and its impact on the environment communities and the economy It introduces a range of perspectives in order to emphasise the complexity of drought policy The book cuts through the often emotional

debate that occurs during a drought event aiming to stimulate reasoned discussion about the best way that Australian farmers and the broader community can live with the vagaries of an uncertain climate

Natural Disasters David Alexander, 2018-10-24 As a well balanced and fully illustrated introductory text this book provides a comprehensive overview of the physical technological and social components of natural disaster The main disaster producing agents are reviewed systematically in terms of geophysical processes and effects monitoring mitigation and warning The relationship between disasters and society is examined with respect to a wide variety of themes including damage assessment and prevention hazard mapping emergency preparedness the provision of shelter and the nature of reconstruction Medical emergencies and the epidemiology of disasters are described and refugee management and aid to the Third World are discussed A chapter is devoted to the sociology psychology economics and history of disasters In many parts of the world the toll of death injury damage and deprivation caused by natural disasters is becoming increasingly serious Major earthquakes volcanic eruptions droughts floods and other similar catastrophes are often followed by large relief operations characterized by substantial involvement of the international community The years 1990 2000 have therefore been designated by the United Nations as the International Decade for Natural Disaster Reduction The book goes beyond mere description and elevates the field of natural catastrophes to a serious academic level The author's insights and perspectives are also informed by his practical experience of being a disaster victim and survivor and hence the unique perspective of a participant observer Only by surmounting the boundaries between disciplines can natural catastrophe be understood and mitigation efforts made effective Thus this book is perhaps the first completely interdisciplinary fully comprehensive survey of natural hazards and disasters It has a clear theoretical basis and it recognizes the importance of six fundamental approaches to the field which it blends carefully in the text in order to avoid the partiality of previous works It covers the earth and social sciences as well as engineering architecture and development studies This breadth is made possible by virtue of a strong emphasis on simple principles of the interaction of geophysical agents with human vulnerability and response All students of environmental sciences studies and geography should find this book useful It is an introductory text which treats this dramatic subject area as something demanding serious academic treatment and not just as an assemblage of horror stories This book is intended for undergraduate students in geography and environmental studies sciences The book should also appeal to any professional or researcher concerned with man environment relations whether in social science or natural science or engineering
