Peregrine Falcon, Eastern Population (Falco peregrinus) , 1991 **Ecology of the Peregrine and Gyrfalcon Populations in Alaska** Tom J. Cade, 1960 **American Peregrine Falcon Rocky Mountain/Southwest Population Recovery Plan** , 1984 The History and Range Expansion of Peregrine Falcons in the Thule Area, Northwest Greenland Andrew G. Gosler, Jeff A. Johnson, Ian Newton, William A. Burnham, Kurt K. Burnham, 2012-07-01 This book covers the discovery and history of the most northern breeding population of Peregrine Falcons in the world near Thule Air Base in northwest Greenland 75 9 77 6 N Although the region was explored by scientific expeditions as early as 1818 Peregrines were not documented in the area until the 1930s By the early 1990s the population had become well established with a warming climate enabling Peregrines from further south to expand their breeding range northward Here Burnham and his co authors present their comprehensive findings on the biology and ecology of this population based on thirteen years of research from 1993 to 2005 **Peregrine Falcon Populations** Janusz Sielicki, Tadeusz Mizera, 2009 **Peregrine Falcons** Candace Savage, 1992 *Monitoring Plan for the American Peregrine Falcon* , 2003 Peregrine Falcons of the World Clayton M. White, Tom J. Cade, James H. Enderson, 2013 Perhaps beginning near the end of the Pleistocene Peregrines began to acquire a vast cosmopolitan distribution and set the stage for fascinating structural behavioral and population distinctions related to where they lived Those divergences were driven by the various demands of landscapes as different as one can find on earth including Greenland tundra South Pacific islands Utah arid scrublands the cold wind swept Aleutians and warm moist Indonesian forests Modern Peregrines reveal that geographic isolation may befall even a creature renowned for great speed and mobility Peregrine Falcons of the World brings together the lifetime experiences of the authors with this splendid falcon in the field and in museums hundreds of personal accounts by Peregrine observers worldwide a vast literature on this falcon which is surely among the best studied birds scores of superb photographic images so generously supplied and the matchless art of Andrew Ellis The goal is to provide a feel for how Peregrines have responded to their varied world and to earmark the many gaps in what we know Oddly Peregrines have not colonized many places where by any reckoning they should be In recent times roughly twenty subspecies of Peregrines were described The historical reasons for these designations and our current analyses are provided here Some populations are very distinct in form and color but

sometimes they geographically overlap and intergrades appear Each subspecies account also describes distribution hunting and nesting habitats migration and wintering ranges estimated population sizes and conservation aspects In the end present day Peregrines appear in at least a score of populations experiencing different degrees of isolation and enjoying different rates of divergence The challenge of understanding their relationships is sometimes made greater by almost complete lack of information or specimens from vast regions where neighboring subspecies apparently come together because no obvious barrier exists But the Peregrine Falcon will never lack for serious aficionados Field people around the world add to the growing literature almost weekly so that someday a more complete appreciation is inevitable Publisher s description

Peregrine Falcons White et al 2002 Peregrine Falcons were removed from the Service's List of Threatened and Endangered Species on August 25 1999 USFWS 1999 From 1999 to 2003 the Service developed a postdelisting monitoring plan USFWS 2003 for Peregrine Falcons in cooperation with other Federal and State agencies Tribes and nongovernmental organizations USFWS 2003 This plan is designed to detect a significant decline in territory occupancy nest success or productivity in six monitoring regions across the United States These three indices of population health were low between 1950 and 1980 when Peregrine Falcon populations declined severely the three measures then rebounded during population recovery Cade et al 1988 Enderson et al 1995 USFWS 1999 White et al 2002 The monitoring plan USFWS 2003 calls for monitoring every three years beginning in 2003 and ending in 2015 These five monitoring periods meet the requirement of ESA to monitor for not less than five years and the three year interval spreads the monitoring over 13 years reflecting the concern of the Service for the long term future of Peregrine Falcon populations The monitoring plan is also designed to collect baseline information on contaminant loads in each monitoring region through the annual collection and archiving of addled eggs and feather samples Those samples will be analyzed and reported in future years This report is of results from Peregrine Falcon monitoring in 2003 which yielded data on territory occupancy nest success and productivity from across the United States This is the first report of post delisting monitoring results for Peregrine Falcons
