Our Posthuman Future Francis Fukuyama,2017-06-15 Is a baby whose personality has been chosen from a gene supermarket still a human If we choose what we create what happens to morality Is this the end of human nature The dramatic advances in DNA technology over the last few years are the stuff of science fiction It is now not only possible to clone human beings it is happening For the first time since the creation of the earth four billion years ago or the emergence of mankind 10 million years ago people will be able to choose their children s sex height colour personality traits and intelligence It will even be possible to create superhumans by mixing human genes with those of other animals for extra strength or longevity But is this desirable What are the moral and political consequences Will it mean anything to talk about human nature any more Is this the end of human beings Our *Posthuman Future* is a passionate analysis of the greatest political and moral problem ever to face the human race

Sutton, 2009-07-02 Considers the ethics and challenges of biotechnology The Political Geographies of Pregnancy Laura R. Woliver, 2010-10-01 A searing study of how modern reproductive politics shapes women's bodily agency Pregnancy indisputably takes place within a woman's body But as reproductive power finds its way into the hands of medical professionals lobbyists and policymakers the geographies of pregnancy are shifting and the boundaries need to be redrawn argues Laura R Woliver The Political Geographies of Pregnancy is a vigorous analysis of the ways modern reproductive politics are shaped by long standing debates on abortion and adoption surrogacy arrangements new reproductive technologies medical surveillance and the mapping of the human genome Across a politically charged backdrop of reproductive issues Woliver exposes strategies that claim to uphold the best interests of children families and women but in reality complicate women's struggles to have control over their own bodies Utilizing feminist standpoint theory and promoting a feminist ethic of care Woliver looks at abortion politics modern adoption laws that cater to male headed families regulations that allow the state to monitor pregnant women but not always provide care for them and the power structures behind the seemingly benign world of egg selling and surrogate parenting She also considers the potentially staggering political implications of mapping the human genome and the exclusion of women's perspectives in discussions about legislation and advancements in reproductive technologies Religion and Racial Progress in Twentieth-Century Britain Patrick T. Merricks, 2017-07-05 This book is the first in depth analysis of Ernest William Barnes Christian eugenic philosophy bio spiritual determinism As a testament to the popularity of the movement mid twentieth century British eugenics is contextualized within a remarkably diverse selection of discourses including secular and Anglican interpretations of modernism poverty population gender equality pacifism and racism This begins to address the scholastic gap on Christian eugenics while highlighting the perseverance of eugenic racism after World War Two Making Morality Todd Lekan, 2003 In this new contribution to moral theory Todd Lekan argues for a pragmatist conception of morality as an evolving educational and fallible practice of everyday life Drawing on the work of John Dewey Lekan asserts that moral norms are neither timeless truths nor subjective whims but habits transmitted through practices Like the habits that make up medicine or engineering moral habits are subject to rational evaluation and change according to

new challenges and circumstances This pragmatic interpretation of morality provides a way out of the conundrum of relativism and absolutism Building on classical American philosophy to address current philosophical concerns Lekan s theory revises our basic understanding of moral life and the place of theorizing within that life Making Morality will prove of great interest to ethical theorists as it enjoins them to measure theoretical inquiries by how well they produce intellectual tools for problem solving in dynamic complex communities

Margaret Sanger's Eugenic Legacy Angela Franks, 2014-12-24 Margaret Sanger the American birth control and population control advocate who founded Planned Parenthood stands like a giant among her contemporaries With her dominating yet winning personality she helped generate shifts of opinion on issues that were not even publicly discussed prior to her activism while her leadership was arguably the single most important factor in achieving social and legislative victories that set the parameters for today s political discussion of family planning funding population control aid and even sex education This work addresses Sanger s ideas concerning birth control eugenics population control and sterilization against the backdrop of the larger eugenic context

Gmo Sapiens Paul Knoepfler, 2015-11-26 Genetically modified organisms GMOs including plants and the foods

made from them are a hot topic of debate today but soon related technology could go much further and literally change what it means to be human Scientists are on the verge of being able to create people who are GMOs Should they do it Could we become a healthier and better species or might eugenics go viral leading to a real new world of genetic dystopia GMO Sapiens tackles such questions by taking a fresh look at the cutting edge biotech discoveries that have made genetically modified people possible Bioengineering genomics synthetic biology and stem cells are changing sci fi into reality before our eyes This book will capture your imagination with its clear approachable writing style It will draw you into the fascinating discussion of the life changing science of human genetic modification **The Queer Question** Scott Tucker,1997 In The Queer Question Essays on Desire and Democracy Scott Tucker issues a fierce clarion call to radicals and queers to be true to the democratic potential of the United States **The Ethics of Environmentally Responsible Health Care** Jessica

Pierce,Andrew Jameton,2004 This text aims to bring bioethics and health care squarely into the 21st century The book shows how environmental decline relates to human health and to health care practices in the US and other industrialized countries

Disability and the Life Course Mark Priestley,2001-07-05 Disability and the Life Course first published in 2001 explores the global experience of disability using a novel life course approach The book explores how disabling societies impact on disabled people s life experiences and highlights the ways in which disabled people have acted to take more control over their own lives It provides a unique combination of analysis policy issues and autobiography offering the reader a rare opportunity to make links between the theoretical the political and the personal in a single volume The material is set in a truly international context with contributions from thirteen different countries bringing together established and emerging writers both disabled and non disabled The book bridges some important gaps in the existing disability literature by including issues relevant to disabled people of all ages and with different kinds of impairments and also by offering a unique analysis of the relationship between disability and generation in a changing world **The Cloning Sourcebook** Arlene Judith Klotzko,2003-09-25 Animal cloning has developed quickly since the birth of Dolly the sheep Yet many of the first questions to be raised still need to be answered What do Dolly and her fellow mouse cow pig goat and monkey clones mean for science And for society Why do so many people respond so fearfully to cloning What are the ethical issues raised by cloning animals and in the future humans How are the makers of public policy coping with the stunning fact that an entire animal can be reconstructed from a single adult cell And that humans might well be next The Cloning Source Book addresses all of these questions in a way that is unique in the cloning literature by grounding what is effectively an interdisciplinary conversation in solid science In the first section of the book the key scientists responsible for the early and crucial developments in cloning speak to us directly and other scientists evaluate and comment on these developments The second section explores the context of cloning and includes sociological mythological and historical perspectives on science ethics and policy The authors also examine the media s treatment of the Dolly story and its aftermath both in the United States and

in Britain The third section on ethics contains a broad range of papers written by some of the major commentators in the field The fourth section addresses legal and policy issues It features individual and collective contributions by those who have actually shaped public policy on reproductive cloning therapeutic cloning and similarly contentious bioethical issues in the United States Britain and the European Union Animal cloning continues for agricultural and medicinal purposes the latter in combination with transgenics Human cloning for therapeutic purposes has recently been made legal in Britain The goal is to produce an early embryo and then derive stem cells that are immunologically matched to the donor Two human reproductive cloning projects have been announced and there are almost certainly others about which we know nothing Sooner or later a cloned human will be born Many lessons can be learned from the cloning experience Most importantly there needs to be a public conversation about the permissible uses of new and morally murky technologies Scientists journalists ethicists and policy makers all have roles to play but cutting edge science is everybody's business The Cloning Sourcebook provides the tools required for us to participate in shaping our own futures

Privatization, Law, and the Challenge to Feminism

Conceiving Risk, Bearing Responsibility Elizabeth M. Armstrong, 2008-07-28 In American society the consumption of alcohol during pregnancy is considered dangerous irresponsible and in some cases illegal Pregnant women who have even a single drink routinely face openly voiced reproach Yet fetal alcohol syndrome FAS in infants and children is notoriously difficult to diagnose and the relationship between alcohol and adverse birth outcomes is riddled with puzzles and paradoxes Sociologist Elizabeth M Armstrong uses fetal alcohol syndrome and the problem of drinking during pregnancy to examine the assumed relationship between somatic and social disorder the ways in which social problems are individualized and the intertwining of health and morality that characterizes American society She traces the evolution of

medical knowledge about the effects of alcohol on fetal development from nineteenth century debates about drinking and heredity to the modern diagnosis of FAS and its kindred syndromes She argues that issues of race class and gender have influenced medical findings about alcohol and reproduction and that these findings have always reflected broader social and moral preoccupations and in particular concerns about women s roles and place in society as well as the fitness of future generations Medical beliefs about drinking during pregnancy have often ignored the poverty chaos and insufficiency of some women s lives factors that may be more responsible than alcohol for adverse outcomes in babies and children Using primary sources and interviews to explore relationships between doctors and patients and women and their unborn children Armstrong offers a provocative and detailed analysis of how drinking during pregnancy came to be considered a pervasive social problem despite the uncertainties surrounding the epidemiology and etiology of fetal alcohol syndrome
