Excerpt from *Perforated Stones From California* Few objects reward archaeologic search in Southern California so frequently as the so called perforated stones and in the collections of any size they form a considerable percentage of the objects represented While probably nowhere in the United States are they so abundant as in California they occur in perhaps every portion of is this country and also in other parts of the world as in Europe Australia India Africa and South America As in the case of many other aboriginal relics it has been found difficult to assign definite uses to these perforated stones especially in view of their great diversity as to size shape material and the manner and extent to which they are finished California specimens are made of sandstone quartzite steatite and other kinds of stone frequently though by no means always such as are rather easily worked In Europe and in Peru specimens are found which are made of bronze The California stones are most frequently circular or nearly circular but occasionally they are irregularly oblong Fig 1 In the latter case the stones appear to have been left nearly or quite in their original shape and specimens are sometimes seen which are two or three times longer than broad and with irregular outlines In the case of such specimens it is evident that regularity of outline and fine finish were in no wise essential to their functions whatever these may have been nevertheless such specimens are frequently highly polished either on one side or on both sides perhaps intentionally or more likely from the friction of constant use About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish

or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *Perforated Stones from California* Henry Wetherbee Henshaw,2016-05-16 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant **Perforated Stones from California, by Henry W.
