Performance-based Assessment of Middle School Students in the Area of Science Jacqueline L. McFarland, 1994 *Probing Space* Clinton W. Anderson, 2012

This action research thesis was performed to explore the research questions: How did the use of formative assessment affect student performance data in understanding the concepts of the Sun Earth Moon system? How did the use of learning scales as formative techniques impact student self assessment of their knowledge of the Sun Earth Moon system? How did the implementation of formative assessment techniques affect student discourse on the topic of the Sun Earth Moon system? Formative assessment techniques including talk friendly probes, sticky bars, and agree/disagree statements were used in the classroom to expose gaps in knowledge, to facilitate discourse, and to promote self assessment. A triangulation of data included a district provided pre/post test, teacher observation, written and oral student responses of formative assessment, self assessment discourse, and student self assessment on a learning goal tracker. Data gathered from student responses to formative assessment techniques given during discourse, lab experiences, in written responses, and from the student learning scale tracker were analyzed to expose misconceptions and gaps in knowledge and guide classroom instruction. Data showed that student performance data improved overall and students narrowed gaps in knowledge of the Sun Earth Moon system. Improvement in student participation and skill of discourse was evident; however, students needed more practice developing written explanations for phenomenon within the Sun Earth Moon system. Through the use of self assessments, students showed improvement in ability to self assess and realized gained knowledge toward their learning goal.

The Effect of Using Problem-based Learning in Middle School Gifted Science Classes on Student Achievement and Students' Perceptions of Classroom Quality Anne Horak, 2013. The purpose of this study was to explore the impact of the Problem Based Learning (PBL) units developed by a large suburban school district in the mid Atlantic for the middle school gifted science curriculum on a student's performance on standardized tests in middle school Science as measured by a sample of relevant test questions from a district managed test bank and b) student's perceptions of classroom quality according to the constructs of meaningfulness, challenge, choice, self efficacy, and appeal as measured by the Student Perceptions of Classroom Quality scale (SPOCQ). Gentry Owens, 2004. A group of students taught using PBL and a comparison group of students taught using traditional instruction were studied. Between the two groups, a total of 457 students participated in the study. Pre and post student achievement data were collected using a 25 item multiple choice test that aligned with state and local objectives.

It was hypothesized there would be no significant differences in gain scores or perceptions between a group of students taught using PBL in comparison to the group taught using traditional methods Data analysis indicated statistically significant gain scores in both of the groups with a higher gain score in the PBL group Data analysis also

Comparing Student Performance and Perception of Competence on Summative Science Performance Tasks Versus Written Science Summative Tests at the Sixth Grade Level Carli Ruth Barnes, 2015 This study examines the effects on student performance of designing performance tasks based on the Next Generation Science Standards It also assesses sixth grade students accuracy in determining their final test scores on both traditional written unit final tests and final performance tasks Eighty four sixth graders in four different classes were studied across four different science units Two classes formed Sample A and two classes formed Sample B They alternated taking traditional written end of unit tests and taking performance tasks instead They recorded their predicted scores and their feelings about each test on a survey immediately after testing The study s results are inconclusive While the teachers felt less confident preparing students for the performance tasks students appeared to prefer them and did moderately better on them How much better was not found to be statistically significant though Students in Sample B consistently outperformed Sample A on all assessments but Sample A students reported having studied for final tests more often In all this study shows how middle school students can be unpredictable and are not always self aware but do prefer to be engaged in hands on learning There may be something to be said for student enjoyment of an assessment even if the final scores students earn on non traditional tests are only moderately better

Doing Good Science in Middle School, Expanded 2nd Edition Olaf Jorgenson, Rick Vanosdall, Vicki Massey, Jackie Cleveland, 2014-04-01 We are among those who have come to enjoy the blossoming intellects often comical behaviors and insatiable curiosity of middle schoolers and choose to work with them With more than 130 years of combined experience in the profession we ve gathered a lot of ideas to share We know from our interactions with educators around the country that precious few quality resources exist to assist science teachers in the middle and this was a central impetus for updating Doing Good Science in Middle School From the preface

This lively book contains the kind of guidance that could only come from veterans of the middle school science trenches. The authors know you're crazy busy so they made the book easy to use whether you want to read it cover to cover or pick out sections to help you with lesson planning and classroom management. The purpose of this investigation was to find out if using project based learning in the middle school classroom is an effective method for teaching key concepts in science while engaging students in the practices of science Traditional science teaching often seems removed from the work that real scientists do By participating in project based learning students had the opportunity to do the work of a scientist and then apply their learning to a real world problem During a unit of study on evolution where the focus question was Do humans affect the evolution of organisms students were presented with a scenario asking them to determine the impact humans are having on the natural environment To accomplish this task students learned how to do field studies focusing on biodiversity Using birds as a focus they took data on campus and at a nearby public park Using their data students evaluated the frequency of native birds species on campus and compared this to the frequency of bird species at a local park Using their understanding of evolutionary concepts students hypothesized about the reasons for the results of their data Based on their conclusions students made recommendations about how an open space on campus should be modified in order to better support the native bird population The results of this study showed that project based learning is effective for teaching complex science concepts and promoting the learning and use of scientific practices
