Democracies in Peril Ida Bastiaens, Nita Rudra, 2018-06-25 Globalization is triggering a revenue shock in developing economies International trade taxes once the primary source of government revenue have been cut drastically in response to trade liberalization Bastiaens and Rudra make the novel argument that regime type is a major determinant of revenue raising capacity once free trade policies have been adopted Specifically policymakers in democracies confront greater challenges than their authoritarian counterparts when implementing tax reforms to offset liberalization s revenue shocks The repercussions are significant while the poor bear the brunt of this revenue shortfall in democracies authoritarian regimes are better off overall Paradoxically then citizens of democracies suffer precisely because their freer political culture constrains governmental ability to tax and redistribute under globalization This important contribution on the battle between open societies and the ability of governments to help their people prosper under globalization is essential reading for students and scholars of political economy development studies and comparative politics

Amplification of Risk We live in a risk society where the identification distribution and management of risks from new technology environmental factors or other sources are crucial to our individual and social existence In The Social Contours of Risk Volumes I and II two of the world's leading and most influential analysts of the social dimensions of risk bring together their most important contributions to this fundamental and wide ranging field Volume I collects their fundamental work on how risks are communicated among different publics and stakeholders including local communities corporations and the larger society It analyses the problems of lack of transparency and trust and explores how even minor effects can be amplified and distorted through media and social responses preventing effective management The final section investigates the difficult ethical issues raised by the unequal distribution of risk depending on factors such as wealth location and genetic inheritance with examples from worker and public protection facility siting conflicts transporting hazardous waste and widespread impacts such as climate change

The Art of Finding Hidden Risks Sidney Resnick, 2024-08-01 This text gives a comprehensive largely self contained treatment of multivariate heavy tail analysis Emphasizing regular variation of measures means theory can be presented systematically and without regard to dimension Tools are developed that allow a flexible definition of extreme in higher dimensions and permit different heavy tails to coexist on the same state space leading to hidden regular variation and steroidal regular variation This emphasizes when estimating risks it is important to choose the appropriate heavy tail Theoretical foundations lead naturally to statistical techniques examples are drawn from risk estimation finance climatology and network analysis Treatments target a broad audience in insurance finance data analysis network science and probability modeling The prerequisites are modest knowledge of analysis and familiarity with the definition of a measure regular variation of functions is reviewed but is not a focal point Practice of Surgery; Clinical, Diagnostic, Operative, Post-operative Dean Lewis, 1928

Peter Swann,2019 For most of his career Peter Swann s main research interest has been the economics of innovation But he has also been preoccupied with a second question what is the best way to study empirical economics In this book he uses his knowledge of the first question to answer the second There are two fundamentally different approaches to innovation incremental innovation and radical innovation radical in the sense that we go back to the roots of empirical economics and take a different tack An essential lesson from the economics of innovation is that we need both incremental and radical innovation for the maximum beneficial effect on the economy Swann argues that the same is true for economics as a discipline This book is a much awaited sequel to Putting Econometrics in its Place which explored what other methods should be used and why This book is about the best way of organising the economics discipline to ensure that it pursues this wide variety of methods to maximum effect **Systems of Maritime Buoyage and Beaconage by Various Countries** International Hydrographic Bureau,1956
