## Period Spaces For P Divisible Groups:

**Period Spaces for P-divisible Groups** M. Rapoport, Thomas Zink, 1996 In this monograph  $p$  adic period domains are associated to arbitrary reductive groups Using the concept of rigid analytic period maps the relation of  $p$  adic period domains to moduli space of  $p$  divisible groups is investigated In addition non archimedean uniformization theorems for general Shimura varieties are established The exposition includes background material on Grothendieck's mysterious functor Fontaine theory on moduli problems of  $p$  divisible groups on rigid analytic spaces and on the theory of Shimura varieties as well as an exposition of some aspects of Drinfeld's original construction In addition the material is illustrated throughout the book with numerous examples **Period Spaces for  $p$ -divisible Groups (AM-141), Volume 141** Michael

Arithmetic and Geometry Gisbert Wüstholz, Clemens Fuchs, 2019-10-08 Arithmetic and Geometry presents highlights of recent work in arithmetic algebraic geometry by some of the world's leading mathematicians Together these 2016 lectures which were delivered in celebration of the tenth anniversary of the annual summer workshops in Alpbach Austria provide an introduction to high level research on three topics Shimura varieties hyperelliptic continued fractions and generalized Jacobians and Faltings height and  $L$  functions The book consists of notes written by young researchers on three sets of lectures or minicourses given at Alpbach The first course taught by Peter Scholze contains his recent results dealing with the local Langlands conjecture The fundamental question is whether for a given datum there exists a so called local Shimura variety In some cases they exist in the category of rigid analytic spaces in others one has to use Scholze's perfectoid spaces The second course taught by Umberto Zannier addresses the famous Pell equation not in the classical setting but rather with

the so called polynomial Pell equation where the integers are replaced by polynomials in one variable with complex coefficients which leads to the study of hyperelliptic continued fractions and generalized Jacobians The third course taught by Shou Wu Zhang originates in the Chowla Selberg formula which was taken up by Gross and Zagier to relate values of the  $L$  function for elliptic curves with the height of Heegner points on the curves Zhang X Yuan and Wei Zhang prove the Gross Zagier formula on Shimura curves and verify the Colmez conjecture on average Colloquium De Giorgi 2013 and 2014 Umberto Zannier, 2015-03-19 Since 2001 the Scuola Normale Superiore di Pisa has organized the Colloquio De Giorgi a series of colloquium talks named after Ennio De Giorgi The Colloquio is addressed to a general mathematical audience and especially meant to attract graduate students and advanced undergraduate students The lectures are intended to be not too technical in fields of wide interest They must provide an overview of the general topic possibly in a historical perspective together with a description of more recent progress The idea of collecting the materials from these lectures and publishing them in annual volumes came out recently as a recognition of their intrinsic mathematical interest and also with the aim of preserving memory of these events *Affine Flag Manifolds and Principal Bundles* Alexander Schmitt, 2011-01-28 Affine flag manifolds are infinite dimensional versions of familiar objects such as Grassmann varieties The book features lecture notes survey articles and research notes based on workshops held in Berlin Essen and Madrid explaining the significance of these and related objects such as double affine Hecke algebras and affine Springer fibers in representation theory e.g. the theory of symmetric polynomials arithmetic geometry e.g. the fundamental lemma in the Langlands program and algebraic geometry e.g. affine flag manifolds as parameter spaces for principal bundles Novel aspects of the theory of principal bundles on algebraic varieties are also studied in the book *Berkeley Lectures on  $p$ -adic Geometry* Peter Scholze, Jared Weinstein, 2020-05-26 Berkeley Lectures on  $p$ -adic Geometry presents an important breakthrough in arithmetic geometry In 2014 leading mathematician Peter Scholze delivered a series of lectures at the University of California Berkeley on new ideas in the theory of  $p$ -adic geometry Building on his discovery of perfectoid spaces Scholze introduced the concept of diamonds which are to perfectoid spaces what algebraic spaces are to schemes The introduction of diamonds along with the development of a mixed characteristic shtuka set the stage for a critical advance in the discipline In this book Peter Scholze and Jared Weinstein show that the moduli space of mixed characteristic shtukas is a diamond raising the possibility of using the cohomology of such spaces to attack the Langlands conjectures for a reductive group over a  $p$ -adic field This book follows the informal style of the original Berkeley lectures with one chapter per lecture It explores  $p$ -adic and perfectoid spaces before laying out the newer theory of shtukas and their moduli spaces Points of contact with other threads of the subject including  $p$ -divisible groups  $p$ -adic Hodge theory and Rapoport Zink spaces are thoroughly explained Berkeley Lectures on  $p$ -adic Geometry will be a useful resource for students and scholars working in arithmetic geometry and number theory

**Shimura Varieties** Thomas Haines, Michael Harris, 2020-02-20 This is the second volume of a series of mainly expository

articles on the arithmetic theory of automorphic forms It forms a sequel to On the Stabilization of the Trace Formula published in 2011 The books are intended primarily for two groups of readers those interested in the structure of automorphic forms on reductive groups over number fields and specifically in qualitative information on multiplicities of automorphic representations and those interested in the classification of  $\ell$ -adic representations of Galois groups of number fields Langlands conjectures elaborate on the notion that these two problems overlap considerably These volumes present convincing evidence supporting this clearly and succinctly enough that readers can pass with minimal effort between the two points of view Over a decade's worth of progress toward the stabilization of the Arthur Selberg trace formula culminating in Ngo Bao Chau's proof of the Fundamental Lemma makes this series timely [Algebraic Geometry: Salt Lake City 2015](#)

Richard Thomas, 2018-06-01 This is Part 2 of a two volume set Since Oscar Zariski organized a meeting in 1954 there has been a major algebraic geometry meeting every decade Woods Hole 1964 Arcata 1974 Bowdoin 1985 Santa Cruz 1995 and Seattle 2005 The American Mathematical Society has supported these summer institutes for over 50 years Their proceedings volumes have been extremely influential summarizing the state of algebraic geometry at the time and pointing to future developments The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City sponsored by the AMS with the collaboration of the Clay Mathematics Institute This volume includes surveys growing out of plenary lectures and seminar talks during the meeting Some present a broad overview of their topics while others develop a distinctive perspective on an emerging topic Topics span both complex algebraic geometry and arithmetic questions specifically analytic techniques enumerative geometry moduli theory derived categories birational geometry tropical geometry Diophantine questions geometric representation theory characteristic and  $\ell$ -adic tools etc The resulting articles will be important references in these areas for years to come **Iwasawa Theory 2012**

Thanasis Bouganis, Otmar Venjakob, 2014-12-08 This is the fifth conference in a bi annual series following conferences in Besancon Limoges Irsee and Toronto The meeting aims to bring together different strands of research in and closely related to the area of Iwasawa theory During the week before the conference in a kind of summer school a series of preparatory lectures for young mathematicians was provided as an introduction to Iwasawa theory Iwasawa theory is a modern and powerful branch of number theory and can be traced back to the Japanese mathematician Kenkichi Iwasawa who introduced the systematic study of  $\mathbb{Z}_p$  extensions and  $p$ -adic  $L$  functions concentrating on the case of ideal class groups Later this would be generalized to elliptic curves Over the last few decades considerable progress has been made in automorphic Iwasawa theory e.g the proof of the Main Conjecture for  $GL_2$  by Kato and Skinner Urban Techniques such as Hida's theory of  $p$ -adic modular forms and big Galois representations play a crucial part Also a noncommutative Iwasawa theory of arbitrary  $p$ -adic Lie extensions has been developed This volume aims to present a snapshot of the state of art of Iwasawa theory as of 2012 In particular it offers an introduction to Iwasawa theory based on a preparatory course by Chris Wuthrich and a survey of the proof of Skinner Urban

based on a lecture course by Xin Wan      Period Domains over Finite and  $p$ -adic Fields Jean-François Dat, Sascha Orlik, Michael Rapoport, 2010-07-08 This book is on the one hand a pedagogical introduction to the formalism of slopes of semi stability and of related concepts in the simplest possible context It is therefore accessible to any graduate student with a basic knowledge in algebraic geometry and algebraic groups On the other hand the book also provides a thorough introduction to the basics of period domains as they appear in the geometric approach to local Langlands correspondences and in the recent conjectural  $p$  adic local Langlands program The authors provide numerous worked examples and establish many connections to topics in the general area of algebraic groups over finite and local fields In addition the end of each section includes remarks on open questions historical context and references to the literature      **Cohomology of Arithmetic Groups** James W. Cogdell, Günter Harder, Stephen Kudla, Freydoon Shahidi, 2018-08-18 This book discusses the mathematical interests of Joachim Schwermer who throughout his career has focused on the cohomology of arithmetic groups automorphic forms and the geometry of arithmetic manifolds To mark his 66th birthday the editors brought together mathematical experts to offer an overview of the current state of research in these and related areas The result is this book with contributions ranging from topology to arithmetic It probes the relation between cohomology of arithmetic groups and automorphic forms and their  $L$  functions and spans the range from classical Bianchi groups to the theory of Shimura varieties It is a valuable reference for both experts in the fields and for graduate students and postdocs wanting to discover where the current frontiers lie      *Automorphic Forms and Galois Representations* Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Part two of a two volume collection exploring recent developments in number theory related to automorphic forms and Galois representations      *Automorphic Forms and Galois Representations: Volume 2* Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Automorphic forms and Galois representations have played a central role in the development of modern number theory with the former coming to prominence via the celebrated Langlands program and Wiles proof of Fermat's Last Theorem This two volume collection arose from the 94th LMS EPSRC Durham Symposium on Automorphic Forms and Galois Representations in July 2011 the aim of which was to explore recent developments in this area The expository articles and research papers across the two volumes reflect recent interest in  $p$  adic methods in number theory and representation theory as well as recent progress on topics from anabelian geometry to  $p$  adic Hodge theory and the Langlands program The topics covered in volume two include curves and vector bundles in  $p$  adic Hodge theory associators Shimura varieties the birational section conjecture and other topics of contemporary interest      Algebraic Geometry Santa Cruz 1995 János Kollár, David R. Morrison, 1997      Proceedings Of The International Congress Of Mathematicians 2018 (Icm 2018) (In 4 Volumes) Boyan Sirakov, Paulo Ney De Souza, Marcelo Viana, 2019-02-27 The Proceedings of the ICM publishes the talks by invited speakers at the conference organized by the International Mathematical Union every 4 years It covers several areas of Mathematics and it includes the Fields Medal and Nevanlinna

Gauss and Leelavati Prizes and the Chern Medal laudatios , **Geometric Aspects of Dwork Theory** Alan Adolphson, Francesco Baldassarri, Pierre Berthelot, Nicholas Katz, Francois Loeser, 2008-08-22 This two volume book collects the lectures given during the three months cycle of lectures held in Northern Italy between May and July of 2001 to commemorate Professor Bernard Dwork 1923 1998 It presents a wide ranging overview of some of the most active areas of contemporary research in arithmetic algebraic geometry with special emphasis on the geometric applications of the p adic analytic techniques originating in Dwork s work their connection to various recent cohomology theories and to modular forms The two volumes contain both important new research and illuminating survey articles written by leading experts in the field The book will provide an indispensable resource for all those wishing to approach the frontiers of research in arithmetic algebraic geometry *Arithmetic and Geometry over Local Fields* Bruno Anglès, Tuan Ngo Dac, 2021-03-03 This volume introduces some recent developments in Arithmetic Geometry over local fields Its seven chapters are centered around two common themes the study of Drinfeld modules and non Archimedean analytic geometry The notes grew out of lectures held during the research program Arithmetic and geometry of local and global fields which took place at the Vietnam Institute of Advanced Study in Mathematics VIASM from June to August 2018 The authors leading experts in the field have put great effort into making the text as self contained as possible introducing the basic tools of the subject The numerous concrete examples and suggested research problems will enable graduate students and young researchers to quickly reach the frontiers of this fascinating branch of mathematics
