Symplectic and Contact Topology Y. Eliashberg, Boris A. Khesin, François Lalonde, 2003-01-01 The papers presented in this volume are written by participants of the Symplectic and Contact Topology Quantum Cohomology and Symplectic Field Theory symposium The workshop was part of a semester long joint venture of The Fields Institute in Toronto and the Centre de Recherches Mathématiques in Montreal The twelve papers cover the following topics Symplectic Topology the interaction between symplectic and other geometric structures and Differential Geometry and Topology The Proceeding concludes with two papers that have a more algebraic character One is related to the program of Homological Mirror Symmetry the author defines a category of extended complex manifolds and studies its properties The subject of the final paper is Non commutative Symplectic Geometry in particular the structure of the symplectomorphism group of a non commutative complex plane The in depth articles make this book a useful reference for graduate students as well as research mathematicians

European Congress of Mathematics Carles Casacuberta, Rosa M. Miro-Roig, Joan Verdera, Sebastia Xambo-Descamps, 2012-12-06 This is the second volume of the proceedings of the third European Congress of Mathematics Volume I presents the speeches delivered at the Congress the list of lectures and short summaries of the achievements of the prize winners as well as papers by plenary and parallel speakers The second volume collects articles by prize winners and speakers of the mini symposia This two volume set thus gives an overview of the state of the art in many fields of mathematics and is therefore of interest to every professional mathematician

Introduction to Symplectic Topology Dusa McDuff, Dietmar Salamon, 2017 Over the last number of years powerful new methods in analysis and topology have led to the development of the modern global theory of symplectic topology including several striking and important results This new third edition of a classic book in the feild includes updates and new material to bring the material right up to date

Contact and Symplectic Geometry Charles Benedict Thomas, 1996-09-28 This volume presents some of the lectures and research during the special programme held at the Newton Institute in 1994 The two parts each contain a mix of substantial expository articles and research papers that outline important and topical ideas Many of the results have not been presented before and the lectures on Floer homology is the first available in book form Symplectic methods are one of the most active areas of research in mathematics currently and this volume will attract much attention

Women in Analysis and PDE Marianna Chatzakou, Michael Ruzhansky, Diana Stoeva, 2024-10-16 Since 2019 Ghent Analysis PDE Center GAPC has been organising international workshops conferences seminars and other scientific events covering a wide range of pioneering

topics in Analysis and PDEs In the winter of 2023 the GAPC decided to collect and publish mathematical results presented by women mathematician hosted at the center This collection in the form short papers presented in the current book offers a wide range of state of art in Analysis and PDEs and disseminates the scientific discoveries of GAPC s visitors and members to scientists outside of the center The short papers published in current volume in the subseries Research Perspectives Ghent Analysis and PDE Center within the book series Trends in Mathematics are peer reviewed written versions of the talks presented by women at GAPC events and are grouped accordingly The current volume is strictly speaking in the realm of pure mathematics but aims to be of interest not only to scientists in the field but also to anyone who has an interest to other applied sciences that Analysis and PDEs have applications to The collection will also include the talks given at the two workshops Women in Generalised Functions organised in 2022 and 2023

Handbook of Dynamical Systems H. Broer, F. Takens, B. Hasselblatt, 2010-11-10 In this volume the authors present a collection of surveys on various aspects of the theory of bifurcations of differentiable dynamical systems and related topics By selecting these subjects they focus on those developments from which research will be active in the coming years The surveys are intended to educate the reader on the recent literature on the following subjects transversality and generic properties like the various forms of the so called Kupka Smale theorem the Closing Lemma and generic local bifurcations of functions so called catastrophe theory and generic local bifurcations in 1 parameter families of dynamical systems and notions of structural stability and moduli Covers recent literature on various topics related to the theory of bifurcations of differentiable dynamical systems Highlights developments that are the foundation for future research in this field Provides material in the form of surveys which are important tools for introducing the bifurcations of differentiable dynamical systems

Group Actions and Equivariant Cohomology Loring W. Tu, 2024-11-26 This volume contains the proceedings of the virtual AMS Special Session on Equivariant Cohomology held March 19-20 2022 Equivariant topology is the algebraic topology of spaces with symmetries At the meeting equivariant cohomology was broadly interpreted to include related topics in equivariant topology and geometry such as Bredon cohomology equivariant cobordism GKM Goresky Kottwitz and MacPherson theory equivariant K theory symplectic geometry and equivariant Schubert calculus This volume offers a view of the exciting progress made in these fields in the last twenty years Several of the articles are surveys suitable for a general audience of topologists and geometers To be broadly accessible all the authors were instructed to make their presentations somewhat expository This collection should be of interest and useful to graduate students and researchers alike

Geometry and Physics H. Pedersen, J. Andersen, J. Dupont, Andrew Swann, 1996-10-11 Based on the proceedings of the Special Session on Geometry and Physics held over a six month period at the University of Aarhus Denmark and on articles from the Summer school held at Odense University Denmark Offers new contributions on a host of topics that involve physics geometry and topology Written by more than 50 leading international experts

J -holomorphic Curves and Symplectic Topology Dusa McDuff, Dietmar

Salamon, 2025-01-03 The theory of J holomorphic curves has been of great importance since its introduction by Gromov in 1985 In mathematics its applications include many key results in symplectic topology It was also one of the main inspirations for the creation of Floer homology In mathematical physics it provides a natural context in which to define Gromov Witten invariants and quantum cohomology two important ingredients of the mirror symmetry conjecture The main goal of this book is to establish the fundamental theorems of the subject in full and rigorous detail In particular the book contains complete proofs of Gromov's compactness theorem for spheres of the gluing theorem for spheres and of the associativity of quantum multiplication in the semipositive case The book can also serve as an introduction to current work in symplectic topology there are two long chapters on applications one concentrating on classical results in symplectic topology and the other concerned with quantum cohomology The last chapter sketches some recent developments in Floer theory The five appendices of the book provide necessary background related to the classical theory of linear elliptic operators Fredholm theory Sobolev spaces as well as a discussion of the moduli space of genus zero stable curves and a proof of the positivity of intersections of J holomorphic curves in four dimensional manifolds The second edition clarifies various arguments corrects several mistakes in the first edition includes some additional results in Chapter 10 and Appendices C and D and updates the references to recent developments **Semitoric Families** Yohann Le Floch, Joseph Palmer, 2024-12-13 View the abstract

Northern California Symplectic Geometry Seminar Y. Eliashberg, 1999 The 12 papers are from various meetings of the seminar which has met regularly since 1989 They discuss the quantization of symplectic orbitfolids and group actions Hamiltonian dynamical systems without period orbits the stabilization of symplectic inequalities and applications Engel deformations and contact structures quantum products for mapping tori and the Atiyah Floer conjecture the cohomology rings of Hamiltonian T spaces symmetric spaces Kahler geometry and Hamiltonian dynamics the mirror formula for quintic threefolds the virtual moduli cycle Floer homology Novikov rings and complete intersections surgery quantum cohomology and birational geometry and group symplectic automorphisms They are not indexed Annotation copyrighted by Book News Inc Portland OR Torus Actions on Symplectic Manifolds Michèle Audin, 2012-12-06 How I have re written this book The book the reader has in hand was supposed to be a new edition of 14 I have hesitated quite a long time before deciding to do the re writing work the first edition has been sold out for a few years There was absolutely no question of just correcting numerous misprints and a few mathematical errors When I wrote the first edition in 1989 the convexity and Duistermaat Heckman theorems together with the irruption of toric varieties on the scene of symplectic geometry due to Delzant around which the book was organized were still rather recent less than ten years I myself was rather happy with a small contribution I had made to the subject I was giving a post graduate course on all that and well these were lecture notes just lecture notes By chance the book turned out to be rather popular during the years since then I had the opportunity to meet quite a few people 1 who kindly pretended to have learnt the subject in this book However the older book does not satisfy at all the idea I

have now of what a good book should be So that this new edition is indeed another book Algebraic Integrability, Painlevé Geometry and Lie Algebras Mark Adler, Pierre van Moerbeke, Pol Vanhaecke, 2013-03-14 This *Ergebnisse* volume is aimed at a wide readership of mathematicians and physicists graduate students and professionals The main thrust of the book is to show how algebraic geometry Lie theory and Painlevé analysis can be used to explicitly solve integrable differential equations and construct the algebraic tori on which they linearize at the same time it is for the student a playing ground to applying algebraic geometry and Lie theory The book is meant to be reasonably self contained and presents numerous examples The latter appear throughout the text to illustrate the ideas and make up the core of the last part of the book The first part of the book contains the basic tools from Lie groups algebraic and differential geometry to understand the main topic **Flows on 2-dimensional Manifolds** Igor Nikolaev, Evgeny Zhuzhoma, 2006-11-14 Time evolution in low dimensional topological spaces is a subject of puzzling vitality This book is a state of the art account covering classical and new results The volume comprises Poincaré Bendixson local and Morse Smale theories as well as a carefully written chapter on the invariants of surface flows Of particular interest are chapters on the Anosov Weil problem C algebras and non compact surfaces The book invites graduate students and non specialists to a fascinating realm of research It is a valuable source of reference to the specialists Mathematical Reviews ,2005 **Relative Almost Existence Theorem and the Hamiltonian Seifert Conjecture** Başak Gürel, 2003 **Lectures in Differentiable Dynamics** Lawrence Markus, 1980 Offers an exposition of the central results of Differentiable Dynamics This edition includes an Appendix reviewing the developments under five basic areas nonlinear oscillations diffeomorphisms and foliations general theory dissipative dynamics general theory conservative dynamics and chaos catastrophe and multi valued trajectories The Many Facets of Geometry Nigel J. Hitchin, 2010-07 This title celebrates the academic career of Professor Nigel Hitchin one of the most influential figures in the field of differential and algebraic geometry
