The Periodontium Hubert E. Schroeder, 2012-12-06 In their contribution to the first edition of this Handbook entitled *The Teeth* LEHNER and PLENK 1936 discussed the tissues constituting the periodontium rather briefly In contrast to the detailed paragraphs dealing with for example enamel and dentine the section about 40 pages and 20 illustrations mostly drawings devoted to periodontal tissues failed to provide a factual review and summary of the contemporary knowledge and latest developments in research on the various components of the periodontium Instead much of the text was an attempt to arrive at conclusions from often purely semantic speculations playing the various schools of thought against each other providing arguments in favor of the authors views and arguments for the feasibility and probability of accepting or rejecting the often diverse opinions while the reader was referred to the already existing literature for factual details Since 1936 however factual details of the structural biology of the periodontal tissues i.e. their development structure function and physiology have been greatly extended and have been internationally accepted With much less opinionated belief to cope

with this knowledge has formed the solid foundation upon which diagnosis prevention and treatment in the fields of clinical perio dontology modern orthodontics and re and transplantation procedures of teeth have been built *Mineralized Tissues in Oral and Craniofacial Science* Laurie K.
