## **Perioperative Care British Medical Bulletin:**

*Preoperative Assessment and Perioperative Management* Mark Radford, Clare Evans, Alastair Williamson, 2011 Pre operative assessment of the surgical patient is a key part of the perioperative process. However, it is one that cannot be separated from the other aspects of perioperative management, both clinical and administrative, that ensures the safe and effective treatment of surgical patients. There are a number of books on the market that examine perioperative management, anaesthesia and surgical nursing that are only able to touch on the pre-operative assessment process. *Pre Operative Assessment Perioperative Management* sets out to be different by bridging the gap between these texts and the evolving and developing area of practice that pre-operative assessment has become in modern healthcare. In order to achieve this, *Pre Operative Assessment Perioperative Management* has set out to deliver the core clinical aspects of practice linked to the education and service development needs of a perioperative service. The challenge for such a book is to integrate this knowledge effectively using the best evidence base for use in every day practice. The brief to the contributors was to help define pre-operative assessment utilising their expertise to draw out some of the leading practices and thoughts of the day. They have achieved this ensuring that the reader has access to some of the leading experts in international perioperative practice. They have done this in an open and accessible style that will guide the reader through some complex and demanding subjects to enable them to deliver better front line care to surgical patients.

*Reconstructing Medical Practice* Christine Jorm, 2016-04-08 *Reconstructing Medical Practice* examines how doctors see health care and their place in it why they remain in medicine and why they are limited in their ability to lead change in the current system Doctors are beset by doubts and feel rejected by systems where they should be leaders some see their role as flogging a derelict system to get the last breath of workability out for their patients Others simply turn away Rigorous studies carried out at large public teaching hospitals in Australia found that doctors were reluctant to increase safety in the wider health system despite making every effort for their own patients Doctors self esteem was found to be delicate due to the uncertain nature of their work colleagues provide the support doctors need to deliver good care However these essential relationships and their cherished connections with patients have disadvantages reducing doctors ability to admit to error On

top of this senior doctors predict a future bereft of professional values one where medicine is just a job While the loss of professional identity introduces new risks for patients and doctors the repercussions of the more self serving attitudes of younger doctors are unknown Reconstructing Medical Practice concludes that regulation despite its recent proliferation is a clumsy and limited approach to ensuring good care It presents original and much needed ideas for ways to rebuild the critical relationship between doctors and the system By better valuing communicative interactions and workplace relationships safe and satisfying medical practice can be reconstructed

**Clinical Management of Shock** Stanislaw P. Stawicki, Mamta Swaroop, 2020-06-24 Shock is a physiological state of war From a healthcare provider perspective the word shock is associated with a mixed array of feelings including dread well founded fear and deep respect The physiological state of shock is well recognized for the associated destructive consequences and its successful management requires prompt identification immediate action and sustained effort by all members of the healthcare team This mindset of advanced preparation and constant readiness constitutes the foundation of the modern approach toward shock early detection and prompt treatment for optimal outcomes Despite the heterogeneity of shock as a clinico pathological entity there are some common threads that permeate all forms and manifestations of shock with apparent increase in observed commonalities in the more advanced and often irreversible stages of the systemic syndrome When faced with shock the body and its systems do their best to compensate for the maldistribution of oxygen and nutrients This is known as the so called compensated shock Beyond that the body loses its ability to adjust any further thus descending into uncompensated shock with a refractory state characterized by vasoplegia and irreversible cardiovascular failure As the reader journeys through the chapters of the book he or she will read about various biomarkers and endpoints of resuscitation explore different types of shock e g septic hemorrhagic anaphylactic and learn about some of the less often discussed topics such as neurogenic and spinal shock as well as the amniotic fluid embolism Our goals were to keep things clinically relevant and practically oriented thus enabling the reader to apply the

newly acquired knowledge in their everyday clinical routines As the reader progresses through the book we hope to help stimulate further discourse and innovative thinking about the topic In this context it is critical that basic translational and clinical research on shock continues to advance Only through ongoing scientific progress can we help improve outcomes for patients with both rare and common forms of shock
