Medical Bulletin ,1999 *Autotransfusion* K. MESSMER,2012-12-06 The practice of autologous blood collection and transfusion has been steadily increasing The concept is not new however its application has been limited because of lack of interest and willingness to make the extra effort required Also there has been concern about the safety of the procedure Homologous blood transfusion is easy and has allowed us to salvage lives and perform procedures which would not have been feasible without the availability of whole blood or its components Transfusion with homologous blood products is safe however complications can and do occur The transmission of AIDS by transfusion of homologous blood products has significantly increased patient and physician awareness of the dangers one faces This potential complication has promoted autotransfusion It is now commonly used and requested by patients and physicians Blood for autotransfusion is collected pre or intraoperatively by phlebotomy and retrieved intra and post operatively from sites of hemorrhage Once collected the blood is either stored or returned to the patient as whole or processed blood To have a successful autotransfusion program requires anticipation of its needs and coordination and training of involved personnel in the blood bank emergency room operating room and post surgical care units Pre deposit and processing of collected blood requires remission of donor criteria and labeling and storage procedures **Annals of Saudi Medicine** ,1990 *European Journal of Anaesthesiology* ,2000 *Autotransfusion* B.
