**On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops** R. Meersman, 2004-10-14 This book constitutes the joint refereed proceedings of seven international workshops held as part of OTM 2004 in Agia Napa Cyprus in October 2004 The 73 revised papers presented together with 31 abstracts of posters from the OTM main conferences were carefully reviewed and selected from more than 150 submissions In accordance with the 7 workshops the papers are organized in topical sections on grid computing and its applications to data analysis Java technologies for real time and embedded systems modeling inter organizational systems regulatory ontologies ontologies semantics and e learning PhD symposium and interoperability **Que's Official Internet Yellow Pages** Joe Kraynak, 2005 Information online is not stored or organized in any logical fashion but this reference attempts to organize and catalog a small portion of the Web in a single resource of the best sites in each category

**On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops** Zahir Tari, Angelo Corsaro, 2004-10-14 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself In fact their attendance was largely sponsored by the other participants If evaluated as successful it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application pull created by the Internet and the so called Semantic Web For DOA 2004 the primary emphasis stayed on the distributed object infrastructure for ODBASE 2004 it was the knowledge bases and methods required for enabling the use of formal semantics

and for COOP IS 2004 the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations. These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them.

**Building CISCO Networks for Windows 2000** Syngress, 2000-10-17  
 Microsoft Corporation the world's largest software vendor and Cisco Systems the world's largest internetworking vendor have jointly developed a common software interface for managing Cisco hardware on Microsoft networks. Cisco Network Services for Active Directory (CNS AD). Until now network administrators have been forced to master two completely different product interfaces to effectively manage their networks. Configuring Cisco Network Services for Active Directory is the first book announced for this enormous Information Technology audience. This book is a practical guide to managing CNS AD. It focuses on how to promote system efficiency and improve network service by using CNS AD to centralize network management using the directory as a repository for all policies that govern network usage. The book also describes how to manage Cisco Internetworking Operating System (IOS) networking features and network resources in the same unified way as other enterprise resources such as user access controls, files and printers. This book coincides with the launch of Windows 2000 Server, the host system for the product. This new technology promises to reduce administrative overheads. Over 500,000 Microsoft and Cisco certification guides from Syngress have been sold over the last two years. Cisco is red hot and this is the merging of its technologies with Microsoft.
