Capital Flight and Capital Controls in Developing Countries Gerald A. Epstein,2005-01-01 Capital flight the unrecorded export of capital from developing countries often represents a significant cost for developing countries It also poses a puzzle for standard economic theory which would predict that poorer countries be importers of capital due to its scarcity This situation is often reversed however with capital fleeing poorer countries for wealthier capital abundant locales Using a common methodology for a set of case studies on the size causes and consequences of capital flight in developing countries the contributors address the extent of capital flight its effects and what can be done to reverse it Case studies of Brazil China Chile South Africa Thailand Turkey and the Middle East provide rich descriptions of the capital flight phenomena in a variety of contexts The volume includes a detailed description of capital flight estimation methods a chapter surveying the impact of financial liberalization and several chapters on controls designed to solve the capital flight problem The first book devoted to the careful calculation of capital flight and its historical and policy context this volume will be of great interest to students and scholars in the areas of international finance and economic development

The Political Economy of Policy Coordination Michael C. Webb,2019-05-15 Michael C Webb explores a central question about postwar economic history how has the growth of international markets affected the coordination of economic policy among nations His analysis overturns the popular assumption that policy coordination has eroded as American hegemony has receded Instead he argues that the growing mobility of capital forced governments to abandon the strategies they had used in the 1950s and 60s to insulate monetary and fiscal policies from international influences and to move toward more direct coordination of central economic strategies Webb shows that since 1945 there has been a crucial shift in the pattern of international collaboration He focuses on three types of adjustment policy trade and capital controls balance of payment lending and intervention in foreign exchange markets and monetary and fiscal policies Noting that the first two types are no longer effective he demonstrates that governments now rely more on monetary and fiscal policy coordination to regulate the global economy As the expansion of international finance created greater turbulence in the global economy in the 1980s the

liberal system of international trade threatened to collapse Webb examines in particular how the United States Japan and Germany took unprecedented steps to coordinate monetary and fiscal policies in the late 1980s and early 1990s although domestic political obstacles not any decline in U S power limited the impact of this policy coordination He concludes by assessing the effectiveness of these attempts to reconcile the goal of a stronger liberal system of economic exchange with the desire to maintain national autonomy
