Forest Certification: A Policy Perspective Chris Elliott,2000-01-01 This paper analyses the development of

certification programmes in three countries Indonesia Canada and Sweden using the Advocacy Coalition Framework ACF as a theoretical reference point The ACF is an actor based framework for analysing policy processes and has not previously been applied in a developing country Actors in the three countries took different approaches to certification In Canada in a programme development process supported by the forest products industry a management systems approach was taken In Sweden performance standards were developed in a process initially driven by NGOs In Indonesia certification was led by an NGO within a framework established by government and a performance standards approach was used The paper concludes that forest certification can be best understood as a policy instrument that promotes and facilitates policy orientated learning among actors and provides indirect incentives for improved forest management Learning occurs both as the standards to be used for certification are developed and as they are implemented The benefits of learning and consensus building among actors such as NGOs forest companies private forest owners indigenous peoples governments etc who have traditionally been in conflict with each other can be significant On the other hand where fundamental changes in forest policy such as tenure and forest revenue reform are needed certification should not be seen as a substitute for these A further conclusion is that while public policies change over periods of decades the private policies of retailers and forest product companies can adapt more rapidly to changing circumstances The concept of a fast track of private policy change compared to the slower track of governmental policy change is therefore proposed and described A number of interesting theoretical and empirical avenues for further research on certification are discussed *Environmental Resources* A.S. Mather,K. Chapman,2018-10-08
