**Listening To The Sea** Robert Jay Wilder, 2010-06-15 Environmental politics and policy while gaining a significant place in the nation s consciousness constantly comes up against the United States desire for more development more profit and a collective lack of foresight Nowhere is this more evident than in the crucial biodiversity of the world s oceans which are victim to pollution overharvesting habitat destruction and simplistic and fragmented environmental policies that do not speak to underlying problems Robert Wilder describes how management of the world s oceans and their ecosystems has long faced two principal obstacles The first is the seemingly infinite capacity of human apathy something that permits us to take the sea s comfort sustenance ecological services and integrity for granted The second is the myriad lines for rigid offshore jurisdiction That people believe the diversity of life on land should be protected is reflected in well publicized efforts to save the celebrated biodiversity of rainforests Far less is known however about protecting a larger two thirds of this planet the oceans Drawing on academic literature and practical experience Wilder illustrates the nature of the questions facing decision makers and provides intelligent well crafted solutions By describing how the emerging idea of precautionary action can help build second generation policy Wilder offers means to halt problematic overfishing He integrates political science with the goals of environmental protection revealing why agencies often fail in their mission to preserve the environment and offers fresh sensible new paths ahead Wilder shows how damage to marine ecosystems often stems from distant land based activities and details emerging ideas such as how industrial ecology can be a cost effective way to preven pollution Through a rigorous integration of policy and science Wilder suggests a much improved second generation governance of the ocean and coasts and proposes new ideas for resolving the environmental policy stalemate

backsliding have limited financing options Concessional financing will remain critical in these countries In addition to reaching the communities most affected concessional financing can reduce the obstacles these countries face in accessing financing For instance public and private donors multilateral and national development banks and other actors related to concessional finance must increase their risk appetite including for taking on or de-risking investments private funders are often unwilling to invest in This also means prioritizing bottom up financing and locally led development Furthermore leveraging and maximizing the impact of financing flows oriented to food security and nutrition will require much greater alignment across governments donors international organizations international financial institutions and philanthropic foundations as well as reforms to the global financial architecture that facilitate scaling up financial flows for achieving SDG Targets 2.1 and 2.2 This Working Paper by the Agrifood Economics and Policy Division at FAO serves as background paper to Chapter 5 of the State of Food Security and Nutrition in the World 2024

### **Of Risks and Normative Responses** Christina Anikó Simmig, 2023-09-23

Disaster losses in the context of natural hazards continue to rise despite a growing understanding of disaster risks and measures to reduce them One obstacle to enhancing private and public disaster risk reduction is the influence of the distorted risk perception of laypeople The book argues for the necessity of public regulations and explores means to mitigate the consequences of such distorted risk perception through legal measures and adjustments to political decision making in Council of Europe member states while respecting the value of autonomy and democratic principles In terms of collective decision making the book advocates for the implementation of deliberative fora in

the democratic decision making process to mitigate the influence of distorted risk perception associated with natural hazards. Additionally, the book discusses a range of disaster risk reducing measures that member states may lawfully implement to protect individuals and communities from the consequences of distorted risk perceptions related to common natural hazards. To underscore the merits of strengthening disaster risk reduction from the bottom up, this book demonstrates how fundamental rights and democratic values impede attempts to increase DRR from the top down, even in cases where people's risk perceptions are distorted. In doing so, the book addresses the issue of disaster risk reduction in a novel way by exposing how legal and political barriers to disaster loss reduction can be overcome by giving higher priority to mitigating distorted risk perceptions. *Reorienting the U.S. Global Change Research Program Toward a User-driven Research Endeavor* United States.
