## Representations De Groupes Localement:

**Representations de Groupes Localement Compacts** A. Borel, 2006-11-15      **Representations modulaires des groupes reductifs p-adiques. Representations cuspidales de  $GL(n)$**  Marie-France Vigneras, 1996-07-30 Taking up the works of Harish Chandra Langlands Borel Casselman Bernstein and Zelevinsky among others on the complex representation theory of a p adic reductive group  $G$  the author explores the representations of  $G$  over an algebraic closure  $\mathbb{F}_l$  of a finite field  $\mathbb{F}_l$  with  $l \neq p$  elements which are called modular representations The main feature of the book is to develop the theory of types over  $\mathbb{F}_l$  and to use this theory to prove fundamental results in the theory of modular representations The present book is of evident importance to everyone interested in the representation theory of p adic groups The monograph starts on an elementary level laying proper foundations for the things to come and then proceeds directly to results of recent research Zentralblatt      *Representations de Groupes Localement Compacts* Armand Borel, 1972      *Representations of  $\ast$ -Algebras, Locally Compact Groups, and Banach  $\ast$ -Algebraic Bundles* J. M.G. Fell, R. S. Doran, 1988-05-01 This is an all encompassing and exhaustive exposition of the theory of infinite dimensional Unitary Representations of Locally Compact Groups and its generalization to representations of Banach algebras The presentation is detailed accessible and self contained except for some elementary knowledge in algebra topology and abstract measure theory In the later chapters the reader is brought to the frontiers of present day knowledge in the area of Mackey normal subgroup analysis and its generalization to the context of Banach Algebraic Bundles      Continuous Cohomology, Discrete Subgroups, and Representations of Reductive Groups Armand Borel, Nolan R. Wallach, 2013-11-21 It has been nearly twenty years since the first edition of this work In the intervening years there has been immense progress in the use of homological algebra to construct admissible representations and in the study of arithmetic groups This second edition is a corrected and expanded version of the original which was an important catalyst in the expansion of the field Besides the fundamental material on cohomology and discrete subgroups present in the first edition this edition also contains expositions of some of the most important developments of the last two decades      Group Representations, Ergodic Theory, and Mathematical Physics Robert S. Doran, Calvin C. Moore, Robert J. Zimmer, 2008 George Mackey was an extraordinary mathematician of great power and vision His profound contributions to representation theory harmonic analysis ergodic theory and mathematical physics left a rich legacy for researchers that continues today This book is based on lectures presented at an AMS special session held in January 2007 in New Orleans dedicated to his memory The papers written especially for this volume by internationally known mathematicians and mathematical physicists range from expository and historical surveys to original high level research articles The influence of Mackey's fundamental ideas is apparent throughout The introductory article contains recollections from former students friends colleagues and family as well as a biography describing his distinguished career as a mathematician at Harvard where he held the Landon D Clay Professorship of Mathematics      Representation Theory of Semisimple Groups

Anthony W. Knap,2016-06-02 In this classic work Anthony W Knap offers a survey of representation theory of semisimple Lie groups in a way that reflects the spirit of the subject and corresponds to the natural learning process This book is a model of exposition and an invaluable resource for both graduate students and researchers Although theorems are always stated precisely many illustrative examples or classes of examples are given To support this unique approach the author includes for the reader a useful 300 item bibliography and an extensive section of notes

**Représentations des groupes réductifs sur un corps local** J.-N. Bernstein,Joseph Bernstein,1984

**Cohomological Induction and Unitary Representations**

Anthony W. Knap,David A. Vogan Jr.,2016-06-02 This book offers a systematic treatment the first in book form of the development and use of cohomological induction to construct unitary representations George Mackey introduced induction in 1950 as a real analysis construction for passing from a unitary representation of a closed subgroup of a locally compact group to a unitary representation of the whole group Later a parallel construction using complex analysis and its associated co homology theories grew up as a result of work by Borel Weil Harish Chandra Bott Langlands Kostant and Schmid Cohomological induction introduced by Zuckerman is an algebraic analog that is technically more manageable than the complex analysis construction and leads to a large repertory of irreducible unitary representations of reductive Lie groups The book which is accessible to students beyond the first year of graduate school will interest mathematicians and physicists who want to learn about and take advantage of the algebraic side of the representation theory of Lie groups Cohomological Induction and Unitary Representations develops the necessary background in representation theory and includes an introductory chapter of motivation a thorough treatment of the translation principle and four appendices on algebra and analysis

**Path Integrals On Group Manifolds, Representation-independent Propagators For General Lie Groups** Wolfgang Tome,1998-03-31

The quantization of physical systems moving on group and symmetric spaces has been an area of active research over the past three decades This book shows that it is possible to introduce a representation independent propagator for a real separable connected and simply connected Lie group with irreducible square integrable representations For a given set of kinematical variables this propagator is a single generalized function independent of any particular choice of fiducial vector and the irreducible representations of the Lie group generated by these kinematical variables which nonetheless correctly propagates each element of a continuous representation based on the coherent states associated with these kinematical variables Furthermore the book shows that it is possible to construct regularized lattice phase space path integrals for a real

separable connected and simply connected Lie group with irreducible square integrable representations and although the configuration space is in general a multidimensional curved manifold it is shown that the resulting lattice phase space path integral has the form of a lattice phase space path integral on a multidimensional flat manifold Hence a novel and extremely natural phase space path integral quantization is obtained for general physical systems whose kinematical variables are the generators of a connected and simply connected Lie group This novel phase space path integral quantization is a exact b more general than and c free from the limitations of the previously considered path integral quantizations of free physical systems moving on group manifolds To illustrate the general theory a representation independent propagator is explicitly constructed for  $SU(2)$  and the affine group Representations des groupes localement compacts François Bruhat, 1971

**Representation Theory and Number Theory in Connection with the Local Langlands Conjecture** Jürgen Ritter, 1989 The Langlands Program summarizes those parts of mathematical research belonging to the representation theory of reductive groups and to class field theory These two topics are connected by the vision that roughly speaking the irreducible representations of the general linear group may well serve as parameters for the description of all number fields In the local case the base field is a given  $p$ -adic field  $K$  and the extension theory of  $K$  is seen as determined by the irreducible representations of the absolute Galois group  $G_K$  of  $K$  Great progress has been made in establishing correspondence between the supercuspidal representations of  $GL_n(K)$  and those irreducible representations of  $G_K$  whose degrees divide  $n$  Despite these advances no book or paper has presented the different methods used or even collected known results This volume contains the proceedings of the conference Representation Theory and Number Theory in Connection with the Local Langlands Conjecture held in December 1985 at the University of Augsburg The program of the conference was divided into two parts i the representation theory of local division algebras and local Galois groups and the Langlands conjecture in the tame case and ii new results such as the case  $n=p$  the matching theorem principal orders tame Deligne representations classification of representations of  $GL_n$  and the numerical Langlands conjecture The collection of papers in this volume provides an excellent account of the current state of the local Langlands Program *Automorphic Forms, Representations and  $L$ -Functions* A. Borel, W. Casselman, 1979 Contains sections on Reductive groups representations Automorphic forms and representations *Group representations in hilbert subspaces of a locally convex* Franciscus Johannes Marinus Klammer, 1979 **SL<sub>2</sub>(R)** S. Lang, 1985-08-23 This book introduces the infinite dimensional representation theory of semisimple Lie groups by concentrating on one example  $SL_2(\mathbb{R})$  The contents are accessible to a wide audience requiring only a knowledge of real analysis and some differential equations Théories spectrales N. *Fundamentals of Infinite Dimensional Representation Theory* Raymond C. Fabec, 2018-10-03 Infinite dimensional representation theory blossomed in the latter half of the twentieth century developing in part with quantum mechanics and becoming one of the mainstays of modern mathematics Fundamentals of Infinite Dimensional Representation Theory provides an accessible account of the topics in analytic group representation theory and operator algebras from which much of the subject has evolved It presents new and old results in a coherent and natural manner and studies a number of tools useful in various areas of this diversely applied subject From Borel spaces and selection theorems to Mackey's theory of induction measures on homogeneous spaces and the theory of left Hilbert algebras the author's self-contained treatment allows readers to choose from a wide variety of topics and pursue them independently according to their needs Beyond serving as both a general reference and as a text for those requiring a background in group operator algebra representation theory for careful readers this monograph helps reveal not only the subject's utility but also its inherent beauty

**Generalized Functions, Volume 6** I. M. Gel'fand, M. I. Graev, I. I. Pyatetskii-Shapiro, 2016-04-19

The first systematic theory of generalized functions also known as distributions was created in the early 1950s although some aspects were developed much earlier most notably in the definition of the Green's function in mathematics and in the work of Paul Dirac on quantum electrodynamics in physics The six volume collection Generalized Functions written by I M Gel'fand and co-authors and published in Russian between 1958 and 1966 gives an introduction to generalized functions and presents various applications to analysis PDE stochastic processes and representation theory The unifying theme of Volume 6 is the study of representations of the general linear group of order two over various fields and rings of number theoretic nature most importantly over local fields p-adic fields and fields of power series over finite fields and over the ring of adèles Representation theory of the latter group naturally leads to the study of automorphic functions and related number theoretic problems The book contains a wealth of information about discrete subgroups and automorphic representations and can be used both as a very good introduction to the subject and as a valuable reference
