Symbolic Data Analysis and the SODAS Software Edwin Diday, Monique

Noirhomme-Fraiture,2008-04-15 Symbolic data analysis is a relatively new field that provides a range of methods for analyzing complex datasets Standard statistical methods do not have the power or flexibility to make sense of very large datasets and symbolic data analysis techniques have been developed in order to extract knowledge from such data Symbolic data methods differ from that of data mining for example because rather than identifying points of interest in the data symbolic data methods allow the user to build models of the data and make predictions about future events This book is the result of the work of a pan European project team led by Edwin Diday following 3 years work sponsored by EUROSTAT It includes a full explanation of the new SODAS software developed as a result of this project The software and methods described highlight the crossover between statistics and computer science with a particular emphasis on data mining
