Reproduction and Development of Marine Invertebrates of the Northern Pacific Coast Megumi F. Strathmann, 2017-09-05

This reference work is designed to provide background information on an array of northeastern Pacific marine invertebrate species so that they can be more easily included in comparative studies of morphology cell biology reproduction embryology larval biology and ecology It is meant to serve biologists who are new to the field as well as experienced investigators who may not be familiar with the invertebrate fauna of the northern Pacific Coast The species discussed in this volume are mostly from the cold temperate waters of the San Juan Archipelago near Puget Sound and the Strait of Georgia but the information and methods given will be useful in laboratories from Alaska to central California and applicable to some extent in other coastal or inland facilities An introductory chapter discusses basic procedures for collecting and maintaining mature specimens for initiating spawning and for culturing embryos and larvae in the laboratory Subsequent chapters summarize reproduction and development in thirty different invertebrate groups and provided recent references through which additional information can be traced cite monographs or keys needed to identify species and give methods useful for studying an array of selected species Available information on habitat diet reproductive mode egg size developmental pattern developmental times larval type and conditions for settlement and metamorphosis is reported for over 450 species

Reproductive Biology of Invertebrates K. G. Adiyodi, Rita G. Adiyodi, 1983 Reproductive Biology of Crustaceans Elena Mente, 2008-01-04 Crustaceans adapt to a wide variety of habitats and ways of life They have a complex physiological structure particularly with regard to the processes of growth molting metabolic regulation and reproduction Crustaceans are ideal as model organisms for the study of endocrine disruption and stress physiology in aquatic invertebrates This book

Schminke, 2012-12-06 This volume contains the Proceedings of the Third International Conference on Copepoda held at the British Museum Natural History in London during August 1987 The central theme of the conference was the biology of marine planktonic copepods although the scientific programme was extremely varied reflecting the wide range of life styles adopted by copepods The three invited symposia held during the conference focussed attention on particular topical areas of research within the field of marine plankton and also provided reviews of chosen aspects of copepod biology These symposia were highly successful The papers they contained were both informative and stimulating and they bring to this volume a lasting significance Each symposium was organised by its chairman Bruce Frost University of Washington decided on the balance of topics selected the speakers and introduced the session on The biology and taxonomy of Calanus Roger Harris Marine Biological Association performed the same vital role for Experimental studies rate processes in field populations of planktonic copepods and Howard Roe Institute of Oceanographic Sciences for Oceanic and deep sea copepods The impact of these papers will be much enhanced by the large

Evolution of Sexual Reproduction in Marine Invertebrates Andrew (Andrey N.) Ostrovsky, 2013-12-16 Three major aspects that distinguish this book are that 1 it contains the most detailed analysis of the sexual reproduction oogenesis fertilization and embryonic incubation in a particular phylum of the aquatic invertebrates Bryozoa ever made this analysis is based on an exhaustive review of the literature on that topic published over the last 260 years as well as extensive original histological anatomical and morphological data obtained during studies of both extant and extinct species 2 this broad analysis has made it possible to reconstruct the major patterns stages and trends in the evolution of sexual reproduction in various bryozoan clades showing numerous examples of parallelisms during transitions from broadcasting to embryonic incubation from planktotrophic to non feeding larvae and from lecithotrophy to placentation corresponding shifts in oogenesis fertilization and embryonic development are discussed in detail and 3 the key evolutionary novelties acquired by Bryozoa are compared with similar innovations that have evolved in other groups of marine invertebrates showing the general trends in the evolution of their sexual reproduction Ecological background of these innovations is considered too Altogether these aspects make the monograph an Encyclopedia of bryozoan sexual reproduction offering an integral picture of the evolution of this complex phenomenon

Sperm Biology Scott S. Pitnick, Dave J. Hosken, Tim R. Birkhead, 2008-11-21 Sperm Biology represents the first analysis of the evolutionary significance of sperm phenotypes and derived sperm traits and the possible selection pressures responsible for sperm egg coevolution An understanding of sperm evolution is fast developing and promises to shed light on many topics from basic reproductive biology to the evolutionary process itself as well as the sperm proteome the sperm genome and the quantitative genetics of sperm The Editors have identified 15 topics of current interest and biological significance to cover all aspects of this bizarre fascinating and important subject It comprises the most comprehensive and up to date review of the evolution of sperm and pointers for future research written by experts in both sperm biology and evolutionary biology The combination of evolution and sperm is a potent mix and this is the definitive account The first review survey of this emerging field Written by experts from a broad array of disciplines from the physiological and biomedical to the ecological and evolutionary Sheds light on the intricacies of reproduction and the coevolution of sperm egg and reproductive behavior

Multicellular Animals Peter Ax, 2013-03-09 Those who wish for permanence in classification must pay the price of stasis as if for ever condemned to confound whales with fish M T Ghiselin 1981 p 283 Scientific argument is a debate concerned with the solution of unresolved problems Before continuing with the phylogenetic system of the Metazoa this foreword gives me the opportunity to discuss some controversial questions to state selected positions more precisely and to remedy omissions I would like to draw special attention to serious problems for phylogenetic systematics resulting from the inevitable confrontation with the current rules of nomenclature 1 In carrying out this debate I hope not to lose the goodwill of those readers who are experts within the first few pages A textbook for students Critics who ask that question and answer in the negative probably underestimate the open mindedness of young people who are not troubled by or can easily free themselves from the restraints and arbitrariness of traditional classifications and to whom systematics is offered as a scientific product in such a form that arguments for every single decision are comprehensible and checkable and can therefore be fully analyzed
