Assessing the Medical Risks of Human Oocyte Donation for Stem Cell Research National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Institute of Medicine, Board on Health Sciences Policy, Committee on Assessing the Medical Risks of Human Oocyte Donation for Stem Cell Research, 2007-03-22 It is widely understood that stem cell treatments have the potential to revolutionize medicine Because of this potential in 2004 California voters approved Proposition 71 to set up a 10 year 3 billion program to fund research on stem cells Under the direction of the California Institute for Regenerative Medicine this program will pay to build facilities for stem cell research and will fund doctors and scientists to carry out research with the ultimate goal of helping to develop therapies based on stem cells For this research to move forward however will require a steady supply of stem cells particularly human embryonic stem cells Those stem cells are collected from developing human embryos created from eggs or oocytes harvested from the ovaries of female donors Thus much of the promise of stem cells depends on women choosing to donate oocytes to the research effort The oocyte donation process is not without risk however Donors are given doses of hormones to trigger the production of more eggs than would normally be produced and this hormone treatment can have various side effects Once the eggs have matured in the ovary they must be retrieved via a surgical procedure that is typically performed under anesthesia and both the surgery and the anesthesia carry their own risks Furthermore given the very personal nature of egg donation the experience may carry psychological risks for some women as well With this in mind in 2006 the California Institute for Regenerative Medicine contracted with the National Academies to organize a workshop that would bring together experts from various areas to speak about the potential risks of oocyte donation and to summarize what is known and what needs to be known about this topic The Committee on Assessing the Medical Risks of Human Oocyte Donation for Stem Cell Research was formed to plan the workshop which was held in San Francisco on September 28 2006 This report is a summary and synthesis of that workshop
