Res Cogitans An Essay In Rational Psychology By Vendler:

Res Cogitans Zeno Vendler, 1972 *Knowing and Seeing* Michael Ayers, 2019-04-24 What is knowledge What if anything can we know In *Knowing and Seeing* Michael Ayers recovers the insight in the traditional distinction between knowledge and belief according to which knowledge stems from direct and perspicuous cognitive contact with seeing its object whereas belief relies on extraneous justification He conducts a careful phenomenological analysis of what it is to perceive one's environment as one's environment the result of which is not only direct realism but recognition that in being perceptually aware of anything we are at the same time perceptually aware of how we are aware of it Perceptual knowing comes with knowing how you know Some other forms of knowledge are similarly direct and perspicuous but not all a distinction is accordingly drawn between primary and secondary knowledge and Ayers argues that no secondary knowledge is possible without some primary knowledge Perceptual knowledge supplies the paradigm to which other cases of knowledge are diversely analogous hence the notorious difficulty of defining knowledge These conclusions supported by a detailed examination of the relations between different grammatical constructions in which know believe and see occur fuel extended critiques of two lines of thought influential in contemporary epistemology John McDowell's conceptualist and intellectualist account of perceptual knowledge and Fred Dretske's externalist employment of sceptical argument Ayers unpicks the arguments for these other views explains the failure of recent attempts at a comprehensive definition of knowledge explores the tight relation between knowledge and certainty and gives an account of how defeasibility should and should not be understood in epistemology Imaginative Horizons Vincent Crapanzano, 2004 How do people make sense of their experiences How do they understand possibility How do they limit possibility These questions are central to all the human sciences Here Vincent Crapanzano offers a powerfully creative new way to think about human experience the notion of imaginative horizons For Crapanzano imaginative horizons are the blurry boundaries that separate the here and now from what lies beyond in time and space These horizons he argues deeply influence both how we experience our lives and how we interpret those experiences and here sets himself the task of exploring the roles that creativity and imagination play in our experience of the world **Information Structure in a Cross-Linguistic Perspective**, 2016-08-29 The present volume draws together contributions from a number of scholars with an interest in empirical cross linguistic description Most of the papers were first presented at the symposium *Information Structure in a Cross linguistic Perspective* held in Oslo in November-December 2000 The descriptions are functionally oriented and their common focus is how information structure in a broad sense can be compared across languages Information structure has been approached in a variety of ways by the authors so as to give a broad picture of this fundamental principle of text production involving the way in which a speaker/writer chooses to present a message in terms of given new information focus cohesion and point of view Central to much of the research is the problem of establishing criteria for isolating linguistic constraints on language use from cultural linguistic

conventions in text production The linguistic comparison includes English German and or one of the Scandinavian languages with sidelights to other languages Most of the papers are text or corpus based and the ongoing work on parallel corpora in Scandinavia is reflected in several contributions A Refutation of Positivism in Philosophy of Mind Pieter A.M.

Seuren,2023-05-05 This book argues that positivism though now the dominant paradigm for both the natural and the human sciences is intrinsically unfit for the latter In particular it is unfit for linguistics and cognitive science where it is ultimately self destructive since it fails to account for causality while the mind the primary object of research of the human sciences cannot be understood unless considered to be an autonomous causal force Author Pieter Albertus Maria Seuren who died shortly after this manuscript was finished and after a remarkable career reviews the history of this issue since the seventeenth century He focuses on Descartes Leibniz British Empiricism and Kant arguing that neither cognition nor language can be adequately accounted for unless the mind is given its full due This implies that a distinction must be made following Alexius Meinong but against Russell and Quine between actual and virtual reality The latter is a product of the causally active mind and a necessary ingredient for the setting up of mental models without which neither cognition nor language can function Mental models are coherent sets of propositions and can be wholly or partially true or false Positivism rules out mental models blocking any serious semantics and thereby reducing both language and cognition to caricatures of themselves Seuren presents a causal theory of meaning linking up language with cognition and solving the old question of what meaning actually amounts to Key Features Provides a fundamental reassessment of the methodology of the humanities Makes a distinctive contribution to the conceptual foundations of linguistics and philosophy of mind Explores the philosophical and historical origins of central developments in the human sciences in the past 100 years Offers a new approach to ontology and epistemology in the scientific study of the creative human mind and its products **A Social**

Epistemology of Research Groups Susann Wagenknecht,2016-12-04 This book investigates how collaborative scientific practice yields scientific knowledge At a time when most of today s scientific knowledge is created in research groups the author reconsiders the social character of science to address the question of whether collaboratively created knowledge should be considered as collective achievement and if so in which sense Combining philosophical analysis with qualitative empirical inquiry this book provides a comparative case study of mono and interdisciplinary research groups offering insight into the day to day practice of scientists The book includes field observations and interviews with scientists to present an empirically grounded perspective on much debated questions concerning research groups division of labor relations of epistemic dependence and trust **Culture Theory** Richard A. Shweder,Robert Alan LeVine,Social Science Research

Council (U.S.). Committee on Social and Affective Development During Childhood,1984-12-28 This book examines the role of symbols and meaning in the development of mind self and emotion in culture *Semiotics of Cities, Selves, and Cultures*

Errors Rodrigo Borges,Ian Schnee,2023-07-20 This is the first collection of essays exclusively devoted to knowledge from non knowledge and related issues It features original contributions from some of the most prominent and up and coming scholars working in contemporary epistemology There is a nascent literature in epistemology about the possibility of inferential knowledge based on premises that are for one reason or another not known The essays in this book explore if and how epistemology can accommodate cases where knowledge is generated from something other than knowledge Can reasoning from false beliefs generate knowledge Can reasoning from unjustified beliefs generate knowledge Can reasoning from gettiered beliefs generate knowledge Can reasoning from propositions one does not even believe generate knowledge The contributors to this book tackle these and other questions head on Together they advance the debate about knowledge from non knowledge in novel and interesting directions Illuminating Errors will be of interest to researchers and advanced students working in epistemology and philosophy of mind

Regulae ad directionem ingenii / Rules for the Direction of the Natural Intelligence René Descartes,2024-01-15 Exactly four hundred years after the birth of Ren Descartes 1596 1650 the present volume now makes available for the first time in a bilingual philosophical edition prepared especially for English speaking readers his Regulae ad directionem ingenii Rules for the Direction of the Natural Intelligence 1619 1628 the Cartesian treatise on method This unique edition contains an improved version of the original Latin text a new English translation intended to be as literal as possible and as liberal as necessary an interpretive essay contextualizing the text historically philologically and philosophically a comprehensive index of Latin terms a key glossary of English equivalents and an extensive bibliography covering all aspects of Descartes methodology Stephen Gaukroger has shown in his authoritative Descartes An Intellectual Biography 1995 that one cannot understand Descartes without understanding the early Descartes But one also cannot understand the early Descartes without understanding the Regulae Rules Nor can one understand the Regulae Rules without understanding a philosophical edition thereof Therein lies the justification for this project The edition is intended not only for students and teachers of philosophy as well as of related disciplines such as literary and cultural criticism but also for anyone interested in seriously reflecting on the nature expression and exercise of human intelligence What is it How does it manifest itself How does it function How can one make the most of what one has of it Is it equally distributed in all human beings What is natural about it and what not In the Regulae Rules Descartes tries to provide from a distinctively early modern perspective answers both to these and to many other questions about what he refers to as ingenium

Descartes Margaret Dauler Wilson,2003-05-20 One of the most significant studies of Descartes in recent times It concentrates on the Meditations to show Descartes philosophy in the context of his overall scientific objectives not all of them fully explicit in the texts

Descartes-Arg Philosophers Margaret Dauler Wilson,2013-10-08 First Published in 1999 The purpose of this series is to provide a contemporary assessment and history of the entire course of philosophical thought Each book constitutes a detailed critical introduction to the work of a philosopher of major influence and significance In this

volume the author offers what she believes to be a somewhat different over all reading of Descartes philosophy and particularly of the Meditations from other commentators especially those written in English **On Being True or False** Merrill Ring, 2019-11-29 The central issue of this book is not What is true or What is truth but What sort of thing is true or false This question has had several answers over the centuries but as argued here all the main ones are mistaken It is not pieces of language sentences events in the mind beliefs nor transcendent objects propositions that are either true or false Rather the chief truth bearer is what someone says or writes Being true or false is rooted in human talk The book argues that the other candidates must either be rejected or understood differently from traditional interpretations Along the way a large number of topics not usually considered in philosophical writings are touched upon and there is a significant criticism of what theoretical linguistics has to say on the issues No other book has attempted such a broad examination of the topic

Discourse Modality Senko K. Maynard, 1993-04-21 The emotional aspects of language have so far not received the attention they deserve This study focuses on nonpropositional i e expressive and interactional meanings of Japanese signs with special emphasis on understanding their cognitive psychological and social meanings It shows how the Japanese language is richly endowed to express personal voice and emotive nuances and confronts the theoretical issues related to this The author proposes a new theoretical framework for Discourse Modality a primary concern for Japanese speakers to analyze the expressiveness of language **Talking Heads** Benjamin Lee, 1997-12-10 In Talking Heads Benjamin Lee situates himself at the convergence of multiple disciplines philosophy linguistics anthropology and literary theory He offers a nuanced exploration of the central questions shared by these disciplines during the modern era questions regarding the relations between language subjectivity community and the external world Scholars in each discipline approach these questions from significantly different angles in seeking to identify and define the intersection of these angles Lee argues for the development of a new sense of subjectivity a construct that has repercussions of immense importance beyond the humanities and into the area of politics Talking Heads synthesizes the views and works of a breathtaking range of the most influential modern theorists of the humanities and social sciences including Austin Searle Derrida Jakobson Bakhtin Wittgenstein Peirce Frege Kripke Donnellan Putnam Saussure and Whorf After illuminating these many strands of thought Lee moves beyond disciplinary biases and re embeds within the context of the public sphere the questions of subjectivity and language raised by these theorists In his examination of how subjectivity relates not just to grammatical patterns but also to the specific social institutions in which these patterns develop and are sustained Lee discusses such topics as the concept of public opinion and the emergence of Western nation states **Interdisciplinary Studies in Pragmatics, Culture and Society** Alessandro Capone, Jacob L. Mey, 2015-07-31 This volume is part of the series Pragmatics Philosophy and Psychology edited for Springer by Alessandro Capone It is intended for an audience of undergraduate and graduate students as well as postgraduate and advanced researchers This volume focuses on societal pragmatics One of the main concerns of societal pragmatics is the

world of language users We are interested in the investigation of linguistic practices in the context of societal practices praxis to use a term used in the Wittgensteinian and other traditions It is clear that the world of users including their practices their culture and their social aims has to be taken into account and seriously investigated when we deal with the pragmatics of language It is not enough to discuss principles of language use solely in the guise of abstract theoretical tools Consequently the present volume focuses explicitly on the interplay of abstract theoretical principles and the necessities imposed by societal contexts often requiring a more flexible use of such theoretical tools The volume includes articles on pragmatics politeness and anti politeness dialogue joint utterances discourse markers pragmatics and the law institutional discourse critical discourse analysis pragmatics and culture cultural scripts argumentation theory connectives and argumentation language games and psychotherapy slurs the analysis of funerary rites as well as an authoritative chapter by Jacob L Mey on societal pragmatics

Knowledge by Agreement Martin Kusch, 2004 Martin Kusch puts forth two controversial ideas that knowledge is a social status like money or marriage and that knowledge is primarily the possession of groups rather than individuals He defends the radical implications of his views that knowledge is political and that it varies with communities This bold approach to epistemology is a challenge to philosophy and the wider academic world

Putting Knowledge to Work, 2024-07-13 In the 21st century knowledge centered approaches have become increasingly popular in analytic epistemology Rather than trying to account for knowledge in other terms these approaches take knowledge as the starting point for the elucidation of other epistemic notions such as belief justification rationality etc Knowledge centered approaches have been so influential that it now looks like epistemology is undergoing a factive turn However relatively little has been done to explore how knowledge centered views fare in new fields inside and beyond epistemology This volume aims at remedying this situation by putting together contributions that investigate the significance of knowledge in debates where its roles have been less explored The goal is to see how far knowledge centered views can go by exploring new prospects and identifying new trends of research for the knowledge first program Extending knowledge centered approaches in this way not only promises to deliver novel insights in these neglected fields but also to revisit more traditional debates from a fresh perspective As a whole the volume develops and evaluates the knowledge first program in original and fertile ways

Epistemology Futures Stephen Hetherington, 2006-03-16 How might epistemology build upon its past and present so as to be better in the future Epistemology Futures takes bold steps towards answering that question What methods will best serve epistemology Which phenomena and concepts deserve more attention from it Are there approaches and assumptions that have impeded its progress until now This volume contains provocative essays by prominent epistemologists presenting many new ideas for possible improvements in how to do epistemology Doubt is cast upon the powers of conceptual analysis and of epistemological intuition Surprising aspects of knowledge are noticed What is it What is it not Scepticism's limits are traced What threatens us as potential knowers What does not The nature and special significance of inquiry of normative

virtues of understanding and of disagreement are elucidated all with an eye on sharpening epistemology's future focus. There is definite insight and potential foresight. How might real epistemological progress occur in the future? Epistemology Futures offers some intriguing clues.

Knowledge as a Mental State? Jens Kohne, 2010. The subject of this book is an epistemological consideration concerning the nature of knowledge. But other than the most essays on the subject of knowledge here I am going to deal with a largely overlooked account to try to find an answer to the question of knowledge. This is the mental state account of knowledge. Or to put it into the main question: is knowledge a mental state? Now the question is: Why is the epistemic thinking of Cook, Wilson, Prichard and Austin afflicted with such ignorance in contemporary epistemic discussions? The answer is an unreflected Platonian heritage during 2000 years of epistemic thinking: a notion which is similar to a point Hetherington has called epistemic absolutism. So my main conclusion here is the JTB thesis: knowledge is some aspect of justified true belief is insufficient in order to give an account of the nature of knowledge. A consequence from this is all the epistemic theories which are dealing with the JTB thesis are based on deficient assumptions. Hence their results, notably the well-known externalism/internalism debate, are insufficient too. So there is a need for a new theory of knowledge based on the MS thesis.
