Research Basins and Hydrological Planning R.Z. Xi, Wei-Zu Gu, Klaus-Peter Seiler, 2004-10-14 In the 20th century water management focused on the local scale of interest In the 21st century we will be facing changes in the quantity of our water cycle The forces behind these new challenges are industrialisation population growth and an insufficiently swift response to climatic change The magnitude and distribution of global changes are not exactly predictable because we live in an ever changing environment and are faced with extreme and interacting processes which all are not yet sufficiently understood Therefore to shoulder this task hydrology should embrace more integrative and interdisciplinary approaches and achieve more flexibility in assessments and decisions To better confront this challenge catchment related solutions are more important than local solutions to satisfy the water demand of agriculture ecosystems industry and the private sector It is wise to keep in mind that the environment has a sustainable memory and our knowledge about attenuation capacities and resilience of the environment is still low Books In Print 2004-2005 Ed Bowker Staff, Staff Bowker, Ed, 2004
