### *Sources and Solutions*

FRED MAGDOFF

An acute food crisis has struck the world in 2008. This is on top of a longer-term crisis of agriculture and food that has already left billions hungry and malnourished. In order to understand the full, dire implications of what is happening today it is necessary to look at the interaction between these short-term and long-term crises. Both crises arise primarily from the for-profit production of food, fiber, and now biofuels, and the rift between food and people that this inevitably generates.

#### 'Routine' Hunger before the Current Crisis

Of the more than 6 billion people living in the world today, the United Nations estimates that close to 1 billion suffer from chronic hunger. But this number, which is only a crude estimate, leaves out those suffering from vitamin and nutrient deficiencies and other forms of malnutrition. The total number of food insecure people who are malnourished or lacking critical nutrients is probably closer to 3 billion—about half of humanity. The severity of this situation is made clear by the United Nations estimate of over a year ago that approximately 18,000 children die daily as a direct or indirect consequence of malnutrition (Associated Press, February 18, 2007).

Lack of production is rarely the reason that people are hungry. This can be seen most clearly in the United States, where despite the production of more food than the population needs, hunger remains a significant problem. According to the U.S. Department of Agriculture, in 2006 over 35 million people lived in food-insecure households, including 13 million children. Due to a lack of food adults living in over 12 million households could not eat balanced meals and in over 7 million families someone had smaller portions or skipped meals. In close to 5 million families, children did not get enough to eat at some point during the year.

**Global food policy report 2023: Rethinking food crisis responses** International Food Policy Research Institute (IFPRI),2023-04-13 This decade has been marked by multiple often overlapping crises The COVID 19 pandemic natural disasters and the ongoing war in Ukraine have all threatened the fabric of our global food systems But opportunities can be found amid crises and the world s food systems have demonstrated surprising resilience With new evidence on what works now is the time to rethink how we address food crises Better prediction preparation and resilience building can make future crises less common and less devastating and improved responses can contribute to greater food security better nutrition and sustainable livelihoods *The Global Food Crisis* Satish Kedia,2010-01-05 The NAPA Bulletin series is dedicated to the practical problem solving and policy applications of anthropological knowledge and methods These papers demonstrate the diverse ways in which anthropology can be used to address the global food crisis while directly responding to local realities Experts explore the dilemma of food insecurity in developing and industrialized countries Practicing and applied anthropologists sociologists and public health workers examine the global food crisis through a variety of theoretical and analytical frameworks Examines the ways in which food policies and economic restructuring have contributed to increasing food inequities across the globe *Research to Meet U.S. and World Food Needs* ,1975 Reflections on the Global Food Crisis Derek Headey,Shenggen Fan,2010 The dramatic surge in food prices from 2005 to 2008 seriously threatened the world s poor who struggle to buy food even under normal circumstances and led to protests and riots in the developing world The crisis eventually receded but such surges could recur unless steps are taken to prevent them Using up to date information the authors of *Reflections on the Global Food Crisis* identify the key causes of the food price surge its consequences for global poverty and the challenges involved in preventing another crisis Breaking from many earlier interpretations the authors conclude that the crisis was not primarily fostered by increased demand for meat products in rising economies such as China and India or by declines in agricultural yields or food stocks or by futures market speculation Instead they attribute the rising food prices to a combination of rising energy prices growing demand for biofuels the U S dollar depreciation and various trade shocks related to export restrictions panic purchases and unfavorable weather As part of their analysis the authors also provide the first comprehensive review of both the macroeconomic and microeconomic consequences of the crisis as well as a detailed comparison of the current crisis with the food price crisis of 1974 To prevent another crisis the authors conclude that the global food system should be reformed through several key steps make trade in agricultural commodities more free yet more secure address long term threats to agricultural productivity such as climate change and resource degradation scale up social protection in potentially food insecure countries and encourage agricultural production in at least some of the countries now heavily dependent on food imports *Reflections on the Global Food Crisis* will be a valuable resource for policymakers development specialists and others concerned with the world s poorest people

Hossain,Patta Scott-Villiers,2017-09-25 Thousands of people in dozens of countries took to the streets when world food prices spiked in 2008 and 2011 What does the persistence of popular mobilization around food tell us about the politics of

subsistence in an era of integrated food markets and universal human rights This book interrogates this period of historical rupture in the global system of subsistence getting behind the headlines and inside the politics of food for people on low

incomes The half decade of 2007 2012 was a period of intensely volatile food prices as well as unusual levels of popular mobilization including protests and riots Detailed case studies are included here from Bangladesh Cameroon India Kenya and

Mozambique The case studies illustrate that political cultures and ways of organizing around food share much across geography and history indicating common characteristics of the popular politics of provisions under capitalism However all

politics are ultimately local and it is demonstrated how the historic fallout of a subsistence crisis depends ultimately on how the actors and institutions articulate negotiate and reassert their specific claims within the peculiarities of each policy A key conclusion of the book is that the politics of provisions remain essential to the right to food and that they involve unruliness In other words food riots work The book explains how and why they continue to do so even in the globalized food system of the 21st century Food riots signal a state unable to meet a principal condition of its social contract and create powerful pressure to address that most fundamental of failings
