

NUTRITIONAL ASSESSMENT

Definition:-

Nutritional assessment is the interpretation of anthropometric, biochemical (laboratory), clinical and dietary data to determine whether a person or groups of people are well nourished or malnourished (over-nourished or under-nourished).

The ABCD Methods:-

Nutritional assessment can be done using the **ABCD methods**. These refer to the following:

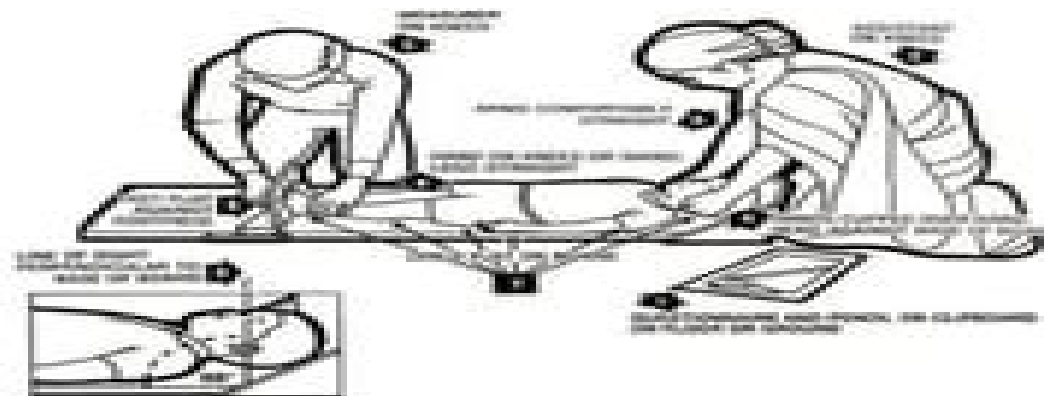

1. Anthropometry
2. Biochemical/biochemical methods
3. Clinical methods
4. Dietary methods.

1. Anthropometry

Anthropometry - Anthropo means 'human' and metry means 'measurement'.

It uses several different measurements including **length, height, weight and head circumference**.

Length-A wooden measuring board (also called sliding boards) is used for measuring the length of children under 2 yrs old to the nearest millimetre. Measuring the child lying down always gives readings greater than the child's actual height by 1-2 cm.
